PREFACE

About two decades ago, under the able guidance of Swami Digambarji, the then Director of Research, Kaivalyadhama S.M.Y.M. Samiti, Lonavla had published Yoga Kośa Vol. I in two parts containing some 1800 entries from 30 texts. The procedure for explanation, that was adopted, was of giving not only the literal meaning of the words but to present a comprehensive information based on the reference and context of the terms. That Yoga Kośa was warmly welcomed not only by students and teachers but also by Yoga researchers. Inspired by this phenomenon, the staff members to the Philosophico Literary Research Department Of Kaivalyadhama undertook the explanation of Yogic terms and concepts from other Yogic texts. The Department scrutinised those texts also which were already consulted for the preparation of the first volume of Yoga Kośa and collected a few but important left-out words worth getting entry in the Yoga Kośa. When the work was in progress, we thought that, since the previous Yoga Kośa proved its Yogic usefulness and was presently out of print, it would be proper on our part of combine it with the New Yoga Kośa. Accordingly, we re-arranged all the words in Devanagari alphabetical order and presented them in this form. The main procedure happens to be the same for both the Kośa. In all, some 3000 words have been explained on the basis of thirty seven Sanskrit texts on Yoga.

We are really sorry to write that at the time when this work is being printed two of our earlier editors responsible for Ist Volume and New edition of Yoga Kośa-Rev. Swami Digambarji and Dr. Mahajot Sahay are no more with us. We are extremely sorry specially for Swami Digambarji, who left us in June 1990, who was really a source of inspiration without whom it became arduous task for us to complete the work. The Department pays its homage to Rev. Swamiji by way of publishing this Yoga Kośa We will remain ever indebted to him for his contributions.

Kaivalyadhama S.M.Y.M. Samiti and particularly the philosophico Literary Research Department is highly thankful to Govt. of India, Ministry of Human Resource Development, for providing 80% financial aid to Kaivalyadhama for bringing out this Yoga Kośa for the cause of humanity in general and yoga in particular.

The department is also thankful to Ex-joint Director Of Research, Dr. P.V. Karambelkar, Ex Principal, G.S. College of Yoga & Cultural Synthesis, Dr. M.L.

Gharote, and the present Joint Director of Research, Dr. M.V. Bhole, for taking keen interest in the work and also for giving time to time guidance and valuable suggestions. We give our special thanks to Dr. G. Ramakrishana who took immense pain in going through the whole mss of Yoga Kośa minutely in order to make it more and more perfect both from language and content point of view.

We also wish to express our appreciations to Shri. T.P. Sreekumaran for typing the manuscripts of Yoga Kośa at all the stage of its development with due precision and accuracy demanded of him. We express our feeling of gratitude towards all those who have directly or indirectly contributed towards its preparation or improvement.

Last but not the least, the credit of printing this Yoga Kośa in such an excellent form without making any complaint against the editors of Yoga Kośa for the inclusion of a new sentences even in the final proof, goes to Model press. New Delhi and to Shri Manoj Talwar in particular, who so devotedly took keen interest in getting it printed.

Finally, we hereby appeal sincerely for constructive and healthy suggestions from our esteemed readers so that we can incorporate them in our further work of similar kind.

PREFACE TO REPRINT EDITION OF YOGA KOŚA

It gives us immense feeling & joy to convey that Kaivalyadhama is getting a very good response from our academic, as well as, the general readers for its publications which are sold out within no time. The same is true with our Yoga Kośa which is unlike other dictionaries as it provides the meaning of each term with reference to the context and hence serves the purpose of Mini - Encyclopedia in the field of yoga. This publication was also sold out since long which created pressing demand for its reprint, as it is the only publication of its kind, the work related to its reprint was entrusted to our Philosophico - Literary Research Department and we are overwhelmed by the efforts of this department as it has - apart from the thorough revision of the whole text with appropriate alterations and additions - also included in it the English alphabetical Word Index as the arrangement of word entries in Yoga Kośa was in Devanāgari alphabetical order which was not user friendly to our English readers, although this index of English alphabetical order was prepared long back by Dr. B. R. Sharma and it was published in the form of booklet independently and was annexed with The New Enlarged Edition of 1991. However, we received the suggestions of our readers that this English alphabetical order index should be made a part and parcel of the text itself and accordingly with a view to facilitate for English readers who are not well acquainted with devanagari script, we have included this index after the introduction and just before the commencement of text of Yoga Kośa.

While bringing out this edition I wish to place on record my heartfelt appreciation for the valuable assistance rendered by Dr. B. R. Sharma, H.O.D. and his team of Philosophico- Literary Research Department for successfully completing the work painstakingly in stipulated time.

Our thanks are also due to the Ministry of H.R.D. Department of Education, Govt. Of India for its regular financial and moral support for research works being carried out and for overall development of Kaivalyadhama.

Our thanks are due to Mr. Tanpure, proprietor, Ace Enterprises, Pune, who has long standing experience in printing and a long association with us, has utilized his expertise towards well-knit printing of the present work.

Last but not least, we appeal to our readers to oblige us by their valuable suggestions and comments with regard to this work so that their opinions and suggestions can be included in the future edition.

Swami Maheshananda
Chairman
Kaivalyadhama S.M.Y.M. Samiti,
Lonavla

INTRODUCTION

Before one actually starts referring to this kind of dictionary like Yoga Kośa, it is advisable that one must go through its 'Introduction' which is expected to unfold the scope and nature of such a dictionary enabling the reader to make its better use and understanding.

About two decades ago Kaivalyadhama Yoga Research Institute had taken up a gigantic and prestigeous project of preparation of Yogic Encyclopaedia to be undertaken by handful of devoted and sincere Research Workers of Philosophico-Literary Research Department. This Encyclopaedia was supposed to give A to Z information about various Yogic terms, concepts or techniques at one place. Even after our sincere efforts in the direction of preparing Yogic Encyclopaedia, it could not be completed because of several limitations. Meanwhile, this esteemed project was thought to be materialised by initially preparing Yoga Kośa so that we could give immediate results of the material collected for the said project and thus the present Yoga Kośa can be considered as an Encyclopaedia in the making.

Most of the ancient Yogic literature happens to be in Sanskrit language. Though there are numerous standard Sanskrit-English dictionaries yet they are not sufficient to fulfil the demands of the readers who are desirous of understanding the concept of Yogic literature with their every minuteness. It is a well-known fact that dictionaries of Philosophy, Economics, Political Science etc., came into existence due to such a demand of the discipline even when the meaning of such words were available in general English-English dictionaries. And a similar need was felt with regard to Yoga. As Yoga is a well-developed śāstra, the language used to describe it ceases to be ordinary Sanskrit language. Hence the general Sanskrit-English dictionaries are of not much avail simply because of the very nature of such dictionaries. Therefore, the compilation of present Yoga Kośa. The words or terms used in any specific śāstra will not yield specific connotation unless they are understood with reference to the context in which they are used. Hence the ordinary Dictionaries are insufficient. Having this in view, the present Yoga Kośa endeavours to give a comprehensive understanding of Yogic terms with the help of their reference to the context of the respective texts wherein they have appeared. It is hoped that this Yoga Kośa will provide sufficient, useful and consolidated information and understanding of particular concept, term or practice.

A sincere effort, on the part of the editors of Yoga Kośa, has been made to provide the explanation based on the factual information available in the text. Even then as it happens in the case of any branch of knowledge, the understanding of the concepts and terms gets coloured by the interpretors' own understanding, Hence at certain places, where the editors have not accepted the traditional explanation of a certain term, they have ventured to give their own interpretation also without any iota of dogmatism or bias.

We have selected words for our Kośa from the Yogic literature that can be classified in the following five groups:

- 1. Yoga Sūtra
- 2. Commentaries on Yoga Sūtra.
- 3. Yoga Upanisads.
- 4. Texts on Hathayoga.
- 5. Sānkhya Kārika.

In all we have consulted thirty-seven texts and though the words from them have been selected almost exhaustively but we have also evaluated the merit of the words depending on their Yogic nature and our understanding. Therefore, our sincere efforts will undoubtedly prove to be helpful to even a layman in going through the texts considered for this dictionary.

The words selected for interpretation appear exclusively in bold letters in the 1) main entry, 2) the body of their explanation and 3) the explanation of other words. This will facilitate the purpose of cross-reference.

It was not possible to give the meaning of all the Sanskrit words or sentences used in our explanation, because of the problems of space and also of their general nature. Consequently, such words or sentences have been printed in Italics alongwith their Devanāgarī rendering.

The main contextual explanation of the word is receded by the nearest literal meaning of the word.

For the compilation of the present Yoga Kośa, we have primarily considered only those Sanskrit Texts which are traditionally considered to be Yogic Texts. Other Sanskrit literature which is conventionally not considered as Yogic, nevertheless contain Yogic wisdom in-built in it, will be our concern for the next volume of the Yoga Kośa.

Yoga-Kośa

योग-कोश

(Explanations with Reference to a Context)

a-अ

- a-1 अ-१ (DBU 10; BVU 69; BY II 19, 27, 33), the first letter of the word aum². It has been variously used in yoga⁴ texts representing earth, the fire, the air, the sky, the God, Viṣṇu, the Yajurveda, and the gross waking state of consciousness.
- a-2 अ-२ (GS V48), the bīja³ of vidhi (brahmā), which is to be mentally recited while brahmā is being meditated upon during the pūraka¹ phase in sagarbha prāṇāyāma² of the sahita² type.
- aṃśa-1 अंश-१ (TSB 4; TSM 3), constituent part. Antaḥkaraṇa, manas², buddhi³, citta² and ahaṅkāra are the aṃśas of ākāśa⁴, samāna, udāna, vyāna, apāna¹ and prāṇa¹² of vāyu²; śrotra, tvak, cakṣu, jihvā and ghrāṇa of vahni; śabda², spraśa, rūpa³, rasa and gandha of ap¹, and vāk, pāṇi, pāda, pāyu and upastha of pṛthvi¹. This is the theroy of these upaniṣads.
- aṃśa-2 জান-২ (TSM 142-4), according to this upaniṣad, for the purposes of meditation, human body is divided into five parts, each of which is called an aṃśa as follows: (1) pṛthvi² extending from soles to knees; (2) ap² from knees to hips; (3) agni³ from hips to

- navel; (4) **vāyu**⁵ from navel to nose; and (5) **vyoma** from nose to the top of the head. The yogī is advised to meditate upon the gods pervading these parts of the body one after the another.
- akaraṇa अकरण (SK 9), absence of karaṇa meaning: "bringing about", "actuating", "making actual", "causing to happen". Asatkaraṇa असत्करण, therefore, means bringing about that which is quite unreal and asadakaraṇa असदकरण impossibility of bringing about anything which is absolutely unreal. Asadakaraṇāt असदकरणात्, therefore, means: since asatkaraṇa असत्करण is impossible, hence every effect potentially exists in its cause. This is the Sāṅkhya theroy known as satkāryavāda.
- akartā-1 अकर्ता-१ (BG IV 13,14), one who performs action without being attached to its results.
- akartā-2 अकर्ता -२ (BG XIII 29), a doer who regards that all the actions are performed by **prakṛti** and not by one's own self.
- akartṛbhāva अकर्तृभाव (SK 19), attitude of not being a doer of actions, which is said to be a characteristic of puruṣa¹.

 That puruṣa¹ does not do anything

follows from the thesis that both **pradhāna** and **vyakta**² are made up of the three **guṇas**¹ and that **puruṣa**¹ is beyond **guṇas**.

akarma अकर्म (BG IV 16-18), detached action. The statements "seeing akarma in karma" and "karma in akarma" connote "performing duties in a detached way" and "considering duties performed in this way as the action" respectively.

akarmakrt अकर्मकृत् (BG III 5), without performing any action.

akalpitā-1 अकल्पिता-१ (YSU I 151), one of the two kinds of extraordinary powers, the other being kalpitā. The akalpitā siddhis³ are acquried unintentionally by some means or the other. They appear spontaneously if a yogī persists in his yoga¹ for its own sake. Thus akalpitā siddhis³ are not desired by the yogī, but come to him in spite of himself. Hence they are here said to come to the yogīs who have shed their vāsanās. Never-theless, these siddhis³ are paradoxically called icchārūpa इच्छारूप (as one would desire).

akalpitā-२ अकल्पिता-२ (YS III 43), see bahirakalpitāvrtti.

akalmaṣa अकल्पष (BG VI 27), free from taints (demerit etc.), a characteristic of jīvanmukta.

akārya अकार्य (BG XVIII 30, 31), action forbidden by the scriptures.

akīrti अकीर्ति (BG II 34), disgrace. Nonperformance of one's enjoined duties leads to akīrti. akula अনুল (SSP IV 9-11), epithet of Śiva. Śiva has been described in SSP as devoid of birth, caste (varṇa), clan, hierarchy, name, place etc. and is the highest and indivisible one.

akuśala अকুমল (BG XVIII 10) action without detachment and discrimination. Person's action is termed as akuśala when performed without discrimination between self and not-self.

akusida अकुसीद (YS IV 29), a person who does not relapse, i.e., fall from the position of vivekakhyāti. Dharmameghasamādhi,² according to Patañjali, is attained only if the yogī who has attained perfection does not fall from this position even for a moment upto the end of his life.

akṛtātman अकृतात्मन् (BG XV II), uncultivated, uncultured person. Person who has not cultivated oneself through the practices of tapas, subjugation of indriyas, by abandoning evil ways and by being ego-free, is akṛtātman and such a person is unable to realise the true self.

akṛtsnavid अकृत्स्नविद् (BG III 29), imperfect knower (ignorant). Interested only in the fruits of action.

akṛṣṇa अकृष्ण (YS IV 7), not-black see aśuklākrsna.

akrama (jñāna) সক্রম (রান) (YS III 54), knowledge which does not consist of successive steps. It is knowledge of a whole - a single insight into a whole. Vivekaja jñāna is of this nature.

- akriya अक्रिय (BG VI 1), actionless. Actionlessness is not the mark of samnyāsī.
- akrodha अक्रोध (BG XVI 2), absence of anger in all the circumstances. One of the twentysix attributes of divine virtues (daivi-sampat).
- akliṣṭa अक्लिप्ट (YS I 5), not motivated or prompted by any kleśa². Cittavṛttis are said to be akliṣṭa when they are not motivated by any kleśa. The person whose cittavṛttis are not so motivated is a yogi.
- akṣamālā अक्षमाला (BY VII 137), rosary, beads. This is made up of sphaṭika, indrākṣa, rudrākṣa and putrajīva and is used for counting the number of chantings of mantras.
- akṣaya অধ্য (BG X 33), inexhaustible. One of the epithets of Lord Kṛṣṇa signifying the imperishableness.
- akṣara-1 अक्षर-१ (ANU 24; ABU 16), imperishable, brahman. The word kṣarate क्षरते means "can be emitted" (as sound) and also "can perish". Akṣara, therefore, is that which can-not be expressed in speech and which never perishes. Such a Supreme Reality is realised by the practice of yoga⁴.
- akṣara-2 अशार-२ (ANU 20), monosyllabic word-here om², the syllable signifying brahman. Śabda brahman is brahman denoted by the syllable om². Parama brahma (Supreme Reality) is brahman as realised without being called by any name.
- akṣara-3 अक्षर-३ (G 73), letter-here the

- letter ha ϵ which is seen by the $yog\bar{i}s$ in the $\bar{a}k\bar{a}\dot{s}a^1$ of **brahmarandhra**¹.
- akṣara-4 अक्षर-४ (BG III 15, VIII 3; 11; X 33; XI 18; XIII 3; XV 16, 18; BY IX 14), imperishable, the paramātman, the Highest Self. Epithet for brahman devoid of any attributes whatsoever.
- akṣara-5 अक्षर-५ (VS III 9, VI, 9, 11), alphabets of devanāgarī script.
- akṣaratraya अक्षरत्रय (VS III 8), triad of letters 'a', 'u' and 'm' which are considered to be beyond time and space and hence called akṣara-traya. These letters have also been conceived as three causes (cf. varṇa-traya).
- akṣi अक्षि (TSM 1), cakṣu¹, the visual sense. According to upaniṣadbrahma-yogī akṣi here stands for the ultimate source and cause of this sense, the mahābhūta agni⁴. According to TSB, the entire universe, material as well as immaterial, has come out of the five mahābhūtas.
- akhaṇdmaṇdala = akhaṇdabrahma
 tejomaṇdala = bāhyābhyantaralakṣya अखण्डमण्डल = अखण्डब्रहातेजोमण्डल = बाह्याभ्यन्तरलक्ष्य (MBUI(3)5-6,
 (4) 1, 4,II (1) 1, 3, 5, 7), the lakṣya of
 śāmbhavī mudrā. It is described as
 pañcabhūtakāraṇam णंचाभूतकरणम्
 taḍitkūṭābham तङित्कूटाभम् catuḥpītham
 चतुःपीठम्. It is the brahman Himself who
 is avyakta³. Its antarlakṣya aspect is
 variously described as jyotī ज्योति (light)
 in the sahasrāra, puruṣa¹ in the
 buddhiguhā बुध्दिगुहा nīlakaṇṭha नीलकण्ठ
 inside sīrṣāntargatamaṇdala शीर्षान्तर्गत-

मण्डल and angusthamātra अंगुष्ठमात्र purusa¹. According to this upanisad, it is all **ātmā**-one and the same entity called by different names. It cannot be perceived by an indriva1. It is also described in this text as a white shining light, resembling lightening, seen inside the sudhācakramandala स्धाचक्रमण्डल which is inside the sūryamandala सूर्य-मण्डल in the head, above the agnimandala. According to this text, the lakşya of śāmbhavi mudrā is not exclusively an antarlaksya. It is a bāhyābhyantarlaksya बाह्याभ्यन्तर्लक्ष्य, which is described in I (8) 5 and II (I) 2, 5 as the unmanifest, completely im-perceptible saguna सगुण, nirguna brahman, beyond nāda, bindu and kalā and pervading the entire world. He who knows this mandala is said to have attained moksa (liberation). It is bāhyābhyantara (inner as well as outer) because it is in the yogi's head and the yogi is in it.

agamyāgamakartr अगम्यागमकर्तृ (TBU I 4), a person who tries to realize that which is beyond the reach of our senses viz., the **brahman**. This is one of the qualification of the person who seeks supreme realisation by **yoga**.

aguṇa अगुण (SK 60), puruṣa¹, who is the opposite of the guṇas and also whatever is guṇātmaka गुणात्मक (of the nature of the three guṇas).

agni-1 अग्नि-१ (YTU 82; ANU19; TSM 65; HP IV 19), the internal heat which resides at the lower end of the

suṣumnā. It mixes with the vāyu¹ which rises up along the suṣumnā and is called kuṇḍalinī¹ when it becomes replete with citta¹ and agni¹ According to ANU, inhaling through one nostril while the other is closed with one finger, and pressing the guda¹ with a heel kindles this fire. According to TSM, kuṇḍalinī¹ is roused when vāyu¹ along with agni¹ - the sthāna स्थान (place) of which in the human body is called the kuṇḍalinīsthāna कुण्डिलिनीस्थान (place of kuṇḍalinī¹) - rises from guda¹ to head.

agni-2 अग्नि-२ (GS III 29,98; HP I 31, II 65), heat. **Jaṭharāgni** is the heat in the stomach which is necessary for digestion.

agni-3 अग्नि-३ (G 23, 36; HP III 71; GS V 41), the fire which resides in the nābhi. It is also called sūrya³, and ravi as well as bhānu¹.

agni-4 अग्नि-४ (TSM 138; ANU 30; GS III 75; G 71), a mahābhūta (bhūta). Its seat in the body is said to extend from the middle of the body to the hips. Its colour is said to be deep orange by GS and in this text dhāraṇā is prescribed on it. G places this agni in the tālu, on which the author prescribes the vaiśvānarī dhāraṇā. According to upaniṣadbrahmayogī, śrotra, tvak, cakṣu, jihvā and ghrāṇa are the aṃśas of vahni¹. Buddhi, which is one of the aṃśas¹ of ākāśa, is said by TSB to reside in it and to exist as agni, presumably because it possesses the

rūpa¹ guṇa. SS also uses the word agni in the mahābhūta context without calling it bhūta¹ or mahābhūta.

ANU describes agni¹ as trimātra (having three mātrās). VB would describe it as a differentiation in and an expression of the rūpa² tanmātrā which he calls trilakṣaṇa রিলম্বেण, i.e. having the characteristics of śabda², sparśa and rūpa² tanmātrās.

agni-5 अग्नि-५ (G 31), the devatā (presiding deity) of susumnā.

agni-6 अग्नि-६ (G 100), flame. As one flame mixes with another and the two become one, so the *yogavit* योगिवत् (successful yogī) becomes one with paramapada (Ultimate Reality).

agni-7 अग्नि-७ (TSB 8), one of the twelve deities which presides over one of the twelve nāḍīs.

agni-8 अग्नि-८ (TSM 138), part of the body from navel to hips (see aṃśa²). This region is called agnisthāna.

agni-9 अग्नि-९ (BG VIII 24), the deity presiding over the period of six months of northern solstice (uttarāyaṇa).

agni-10 अग्नि-१० (BG IX 16), deity identified with sacrificial fire.

agni-11 अग्न-११ (BY II 4, 20, 98; III 14; IV 4, 14, 63; IX 96; XI 56), one of the three mātrās of oṃkāra, other two being vāyu and ravi: one of the three enjoyers, others being prāṇa and āditya. One of the seven deities corresponding to seven Vedic metres. First among twenty-four deities

presiding over one of the twentyfour letters of **gāyatrī**.

agni-12 अग्नि-१२ (SSP I 61, 66), one of the immediate causes of human functioning. Agni has eleven forms out of which the last and prominent one is termed as jyoti.

agni-13 अग्नि-१३ (YSU V 28-33), vital fire in the body. The form of brahman has got three aspects- sthūla, sūkṣma and para. Five varieties of vital fire reside in the subtle body of brahman. These five fires are kālāgni, vāḍavāgni, śūnyāgni, vaidyutāgni, and pārthivāgni.

agnikula अग्निकुल (VS III 46), the region of fire (cf.śikhisthāna).

agnibija अग्निबीज (DU V 8), bija letter on agni, i.e. (raṃ), contemplation on which, with bindu¹ and nāda¹, is here prescribed during the kumbhaka¹ phase of prāṇāyāma².

agnimaṇḍala अग्निमण्डल (MBU II (1) 5). See akhaṇdamaṇḍala.

agniṣvātta अग्निखात्त (VB III 26), a class of gods who are supposed to be able to realise whatever they think of, to have all the siddhis², to have the life of a kalpa कल्प (a period of millions of years), to be endowed with perennial youth and freshness, to have all satisfactions of desire at their command, to have self-created bodies, and to have the choicest and most affectionate nymphs to serve them. They are said to be the denizens of mahendra bhuvana महेन्द्रभ्वन (a place of habitation for these gods).

agnisāra अग्निसार (GS I 20), synonym for vahnisāra, one of the four antardhautis. It consists in taking the navel to the backbone a hundred times, and is said to increase jaṭharāgni by getting rid of stomach diseases. Since it increases jaṭharāgni therefore it is called agnisāra.

Agnisāra differs from kapālabhāti in so far as each act of drawing the abdomen inward in kapālabhāti is an act of exhalation followed by automatic inhalation, while agnisāra is not a respiratory action.

Agnisāra differs from uḍḍiyāna too. In agnisāra the abdomen is to be manipulated, while uḍḍiyāna is a process of mock inhalation, which is the work of the thorax (see Āsana by Swāmī Kuvalayānanda, p.45)

agnisevā अग्निसेवा-vahnisevā विह्नसेवा (SS III 38; HP I 61; GS V 26), basking near fire which is to be avoided by *yogīs*, particularly when they begin the **haṭha** practices.

agnisomātmaka अग्निसोमात्मक (BY IX 96), having the qualities of agni (heat) and soma (cold). The suṣumnā and iḍā nāḍīs have been considered possessing the qualities of agni and soma respectively.

agnisthāna अग्निस्थान = vahnisthāna विह्नस्थान (DU VIII 4; G 23; HP II 52; GS V 41; TSM 138; YTU 91), the seat of fire in the body. Ordinarily agni¹ is supposed to reside in the navel region, but its seat is said to stretch from the middle of the body to the hips according to TSM and from anus to the chest according to YTU and DU.

agnihotra अग्निहोत्र (BY IX 139; SS I 6), offering oblations to fire. While doing this, the agnihotri, the person who performs the yajña यज्ञ (offers oblations to fire), is required to relinquish all desire for fruit and meditate upon the puruṣa¹ in the fire. Performing yajña was considered by ancient Indians to be a supreme duty of every man.

anga-1 अंग-१ (TBU I 28), limb of the body. Aṅgānām samatā अंगानां समता is, therefore, the poise of all the parts of the body. According to this upanisad, it is that poise in which a person becomes one with **brahman**. In fact, it is a poise of the mind and not of the limbs of the body; because it is not like the straightness of a dry tree. On the other hand, it is the state in which uninterrupted brahmacintana ब्रह्मचिन्तन, (meditation on the Supreme Reality) is possible. Mental poise, necessary for incessant brahmacintana ब्रह्मचिन्तन, is possible even while the body is drooping, or curved, or moving automatically. The important point is that, manas² is to be withdrawn from all objects, just as a tortoise withdraws its limbs, and to be thus reduced to quietness. This is the first step in the yoga taught by this upanisad. It is stopping the mind from wandering so that attention may be directed to prānāyāma2 which is the next step in this voga1.

aṅga-2 अंग-२ (TBU I 16; TSM 34; HP I 17), yogāṅga.

aṅga-3 अंग-३ (TBU I 16), yama etc. fifteen components. It is not mentioned here of what they are the angas² (components). They are yama1, niyama¹, tyāga, mauna (silence), deśa (selection of the right place), kāla, āsana¹, mūlabandha¹, dehasāmya, drksthiti, prānasamyama, pratyāhāra, dhāranā, ātmadhyāna and samādhi⁵; and since all these words are ordinarily used in connection with yoga, we can say they are the angas1 of the voga4 taught in this upanisad. In fact, what is taught in this upanisad is a denial of most of the yogāngas as understood by other authorities on voga1. Dhāranā, dhyāna and samādhi1 are the only three angas1 of which the definitions given here resemble those given by the other writers on yoga.

aṅga-4 अंग-४ (TSB 8). This upaniṣad speaks of twelve aṅgas, each having three aspects: ādhyātmika, ādhibhautika and ādhidaivika. The karaṇas² which work in us are said to be the ādhyātmika; the corresponding bodily organs, the ādhibhautika; and the twelve deities who are mentioned by name, the ādhidaivika aṅgas².

The **ādhyātmika aṅgas** are the most important ones from the point of view of this *upaniṣad*, which is clearly a psychological text. These **aṅgas** are the ten **indriyas**¹. **manas**² and **buddhi**¹.

Prāṇa^{1,2} and the other four vāyus¹ and the five tanmātrās are said to be contained in the ten indriyas¹; citta² in manas¹ and ahaṅkāra¹ in buddhi¹. aṅgamejayatva-1 अंगभेजयत्व-१ (YSI31), tremor of limbs-one of the four morbidities incidental to the vikṣepas. When a yogī finds that he is making no progress in yoga¹ and feels frustrated, he begins to tremble at the slightest cause, because, in Vyāsa's language, he is no longer samāhitacitta i.e. he has lost equanimity of mind.

aṅgamejayatva-2 अंगमेजयत्व-२ (VB II 47), shifting from one position to another, which the yogīs have to avoid for a long time. The overcoming of aṅgamejayatva falls under prayatnaśaithilya. aṅgalāghava अंगलाघव (HP I 17), levity in the body-mind complex (aṅga). This is the effect of the practice of āsana.

acala अचल (BG II 24, 53), steady. State of mind bereft of the vikalpa and viksepa and fixed (on Reality).

acaladṛśā अचलदृशा (G 8; GS II 7; HP I 35), acaladṛṣṭi अचलदृष्ट fixed gaze. While practising siddhāsana, the gaze must be fixed on the middle of the eyebrows (cf. siddhāsana).

acāpala अचापल (BG XVI 2), absence of fickleness; (to be firm in the course of action undertaken). One of the twentysix divine virtues (daivī-sampat).

acintya-1 अचिन्त्य-१ (ABU 6; TBU I 9, 11), not capable of being thought of. **Brahman** is said to be neither cintya nor acintya. According to upanişadbrahmayogi, brahman is not cintya in the sense of being an object of cognition, because a simple cognition which is a subject-object relation is not possible of brahman. At the same time, brahman is not perfectly acintya, because there is a method of knowing Him. He is not quite unknowable.

acintya-2 अचिन्त्य-२ (BG II 25, XII 3), transcending the categories of thought. Atman is 'acintya'-(Self is) beyond the categories of thought because it is imperceptible.

acetana-1 अचेतन-१ (SK 20). Pradhāna and vyakta are both described as acetana (cetanārahita चेतनारहित i.e. without cetana). Purușa1 is described as cetana (= cetanāsahita चेतनासहित i.e. endowed with cetana). By cetana, in this context, is meant anything like sensation, perception, thought, imagination, conception or comprehension. These are the functions of buddhi1 and buddhindriyas which are differentiated in pradhana (= prakṛti¹). The cetanā of puruşa is not prākṛtika प्राकृतिक (petaining to prakṛti). From Patañjali's statements: draṣṭā pratyayānupaśyah द्रष्टा प्रत्ययान्पश्यः (II 20), and citeh svabuddhisamvedanam चित्रे: स्वबुध्दसंवेदनम् (IV 22), it appears that puruşa¹ introspects the cittavṛttis¹, and this introspection appears to be the cetana of purusa. It is not the introspection of the sensum or an image by the mind; but that of cittavrttis2 -

perceiving, imagining, thinking by the puruṣa (cf. sadājñātāścittavṛttaya-statprabhoḥ सदाज्ञाताश्चित्तवृतयस्तत्प्रभोः etc. YS IV 18). Patañjali's idea is that, while citta¹ itself undergoes a change as it knows one thing after another, the puruṣa¹ does not undergo any change and yet introspects all the cittavṛttis¹ as they go on. In this way,we get some idea of what he means by cetanā of puruṣa¹; but we are kept in the dark as to what Īśvarakṛṣṇa means by the cetanā of puruṣa¹.

In SK 20, **liṅga** is said to be *cetanāvadiva* (as if it had **cetanā**) and thus a distinction is made between the consciousness of **liṅga¹** (consciousness as we know it) and **cetanā** which exclusively belongs to **puruṣa¹**. Use of the word *iva* হ্ব (as if) is significant.

acetana-2 अचेतन-२ (VB II 5, 15 IV 13), no sentient. Sentient creatures as well as nonsentient things may cause pleasure or pain to somebody. Rāga is developed towards those persons and things which bring pleasure and dveṣa towards those which bring pain.

acetas अचेतस् (BG III 32, XV 11. XVII 6), devoid of discrimination. Those who perform action having desire of fruits are acetas.

acyuta-1 अच्युत-१ (TBU I 7, 8), unswerving. *Padācyuta* पदाच्युत, therfore, means never falling from one's lofty position. This is one of the various ways in which the indescribable **brahman** is referred to. **Acyuta** is also for this reason one

of the names of **viṣṇu**, who is no other than **brahman**.

acyuta-2 अच्युत-२ (VB III 26), that class of denizens of the satyaloka who enjoy savitarka - dhyāna - Patañjali's savitarkā-samāpatti.

ajaḍa अजड (YSU I 26), cetana, i.e. free from acetanā. See acetana.

ajapā अजपा (GS V 85, 86, 90; DBU 63; BVU 78), ajapā gāyatrī so'ham सोऽहम the word which is obtained by reversing hamsah. In the state of kevala**kumbhaka**¹, though the $yog\bar{i}$ does not breathe, he is advised to repeat so'ham सोऽहम mentally at the rate of fifteen per minute and the duration of his kumbhaka1 is measured in terms of the number of times he repeats the mantra¹. On the first day, he begins with the duration of one recitation and gradually goes up to that of sixty-four recitations, i.e. from 1/15 or 64/15 (=4.27) minutes. Then everyday he increases the number of recitations either by one or by five.

ajapāsankhyā अजपासंख्या = ajapāparimāṇa अजपापरिमाण (GS V 86; YCU 33; DBU 61-3). When a person inhales he is supposed to make an audible or an inaudible sound haṃ हं and when he exhales he is supposed to make an audible or inaudible sound saḥ सः, Hence a breath is called haṃsaḥ. This goes on fifteen times every minute. Breathing is thus supposed to be unconscious recitation of the ajapā gāyatrī. It is obviously called ajapā

because pepole do not intentionally recite the mantra³. According to GS, while so'ham सोऽहम् is a mantra3, हंसः is just breathing, though it is called a mantra³. But perhaps hamsah is also mentally recited. According to Sāradātilaka शारदातिलक (14,81), the rsi ऋषि (author) of this mantra³ is brahma, its metre gavatri and its deity śiva - the source of the universe. Lakṣmītantra लक्ष्मीतन्त्र (24, 57, 58) calls the first syllable i.e., ham हं, bhoktā (enjoyer) and the second i.e. sah सः bhogya (that which is enjoyed). The first syllable, according to this text, is to be raised from the ādhāra (mūlādhāra) to the mūrdhan मुर्धन (head) and the second to be let out through the mouth.

ajarāmara अजरामर (VB III 26), one of the four classes of gods who are the denizens of janoloka and have complete control over bhautika भौतिक (pertaining to the bhūtas) as well as aindriya ऐन्द्रिय (pertaining to the indriyas) reality. They enjoy the longest span of life.

ajāḍyanidrā अजाङ्चनिद्रा (MBU V 8), yoganidrā turyāvasthā (the fourth state).

ajña अज्ञ (BG IV 40), having no knowledge (of oneself).

ajñānaja अज्ञानज (BG X 11 XIV 8), illusory knowledge born of non-discrimination.

ajñānasambhūta अज्ञानसम्भूत (BG IV 42), same as ajñānaja. añjanatā अञ्जनता (B I 41), quality of assuming the form of the object. Owing to the withering out of the modifications, the citta becomes purified like a clean crystal and it becomes capable of assuming the form of the object leading to the complete merger of grahītr, grahana, and grāhya.

animā अणिमा (G 65; YS III 45; ATU 11; SS IV 109), ability to the shrink to the minutest - even to a microscopic size. It is one of the eight wellknown extraordinary achivements. According to G, besides acquiring the ability to raise the retas the $yog\bar{i}$ whose body is amrtāpūrna अमृतापूर्ण (filled with nectar) attains the eight well-known abilities like animā etc. Neither Goraksa, nor Patañjali, nor Īśvarakrsna nor Vyāsa, uses the word siddhi for this set of eight achievements. Īśvarakrsna's eight siddhis2 are quite different and Patañjali's siddhis are much larger in number. Animā is acquired (1) by bhūtajaya भतजय (conquest of material nature, YS III 45); (2) by getting the body saturated by amrta² (G 45); (3) by seeing a light above the root of the upper palate (ATU 11, DU I (3) 4); (4) by recitation of mantras³ (VB IV 1); by clenching the teeth, raising the tongue so as to touch the upper palate and inhaling slowly (SS III 94); (6) by practising **śakticālana** (SS IV 109); (7) by performing kumbhaka by closing both nostrils with fingers (SS V 58); (8) by meditating on svādhisthāna (SS

V 107); (9) by merging of the manas² in the brahmarandhra even for a split second (SS V 183); (10) by meditating on brahman (SS V 211); (11) by practising mahāmudrā, mahābandha and mahāvedha (HP III 30); or (12) by practising the other mudrās (HP III 130).

According to ATU, success in the **anusandhāna**³ on the big ray of light localised in front of the uppermost part of the roof of the mouth brings these achievements to the $yog\bar{i}$. When a $yog\bar{i}$ succeeds in $p\bar{u}rvat\bar{a}raka\ yoga^1$, he sees a ray of light above and acquires the eight **siddhis**².

aṇu-1 अण्-१ (YS I 40; VB I 36), extremely small. According to *Patañjali*, the minutest of all things can be the object of **dhyāna** as well as the biggest of all. aṇu-2 अण्-२ (VB I 43, 45), atom. The object like a cow, a pot, a book etc. are different assemblage of atoms. The **tanmātrās** are said to be the constituents of atoms and hence they are subatomic reality.

aṇḍapiṇḍa अण्डपिण्ड (SSP I 2), macrocosm and microcosm, whole and part. Here aṇḍa refers to brahman, the root cause of the animate and inanimate world whereas piṇḍa refers to the individual body or one part of the whole creation.

atandrita अतिन्द्रत (HP I 64), alert, unsluggish. Through alert practice, success in yoga-sādhanā is achieved even by young, old, very old, diseased and weak persons.

- atapaska अतपस्क (BG XVIII 67), one who is devoid of tapas.
- atikrāntabhāvanīya अतिक्रान्तभावनीय (VB III 51), a yogī at the last of the four stages of yoga¹-one who has nothing more to achieve and whose only objective is to bring about pratiprasava.
- atijāgara अतिजागर (ANU 27), undersleeping (= not sleeping enough), which is one of the seven things that a *yogī* has to avoid, the other six being *bhaya* भय (fear), **krodha**, **ālasya**, atisvapna, atyāhāra and anāhāra.
- atipramāṇa अतिप्रमाण (BY XII 4), infallible authority. Sāṅkhya, Yoga, Pāñcarātra, Vedas and Pāśupata doctrines are considered to be infallible authorities.
- atiprasanga अतिप्रसंग (YS IV 21), infinite regress. Patañjali here points out a fallacy in accepting the ksanikavādin's contention, namely, that "Purusa need not be accepted as self-illuminating seer-principle over and above the citta; instead, citta itself can be accepted as both illuminating itself and the object in the same moment and further if it is conceded that there cannot be a cognition of both at the same time then it should be accepted that one citta is illumined by another citta." But according to Patañjali if it is accepted that one citta is illuminated by another citta then we will have to posit the third citta for the sake of illumination of the second citta and again for the third the

- fourth **citta** and thus leading one to infinite regress (cf. **smrtisankara**).
- atimātrā अतिमात्रा(BY VIII 13,14), the particular time unit. Prāṇāyāma should be practised for the time unit known as atimātrā. Time taken for milking the cow or cooking the food or shooting an arrow or resonance of a bell are examples of atimātrā. When prāṇāyāma is practised with this time duration it causes sweat and tremors.
- atiśūnya अतिशून्य (HP IV 73), brahmarandhra. Brahmānanda considers the viśuddha cakra¹ in the throat to be the atiśūnya. When vāyu¹ reaches this spot after piercing the viṣṇugranthi, the yogī hears a very rich sound of a kettle-drum.
- atisvapna সনিবেদ (ANU 27), sleeping too much. This, according to this text, is one of the seven things to be avoided by a $yog\bar{i}$.
- atīta अतीत (YS III 16, IV 12) past. (cf adhvabheda and anāgata).
- atindriya अतीन्द्रिय (BG VI 21) that which transcends the senses; that which is amenable through the **buddhi** (intellect) only.
- atīvabhojana अतीवभोजन (SS III 38), overeating, which is a hindrance in the way of **yoga**¹. See **atyāhāra**.
- atyaśnat अत्यश्नत् (BG VI 16), one who eats beyond one's own capacity. Śaṅkara, quoting Śatapatha-brāhmaṇa, says that "overeating is as detrimental to yoga as eating less than required (cf. anaśnat). So a yogi should eat neither

more nor less than required (cf. mitāhāra)

- atyāhāra अत्याहार (HP I 15, ANU 27), overeating. According to ANU, it is one of the seven things to be avoided by a *yogī*, and according to HP, one of the six disturbing factors.
- atha अथ (VS I 1; VBh I 1; NGB I 1), henceforth, hereafter. This term is used to indicate the commencement of a śāstrīya-grantha (systematic treatise). The occurrance of this term in the beginning of the śāstra has auspicious connota-tions too (cf. anuśāsana.).
- adambhitva अदम्भित्व(BG XIII 7), opposite of dambhitva. Not to talk vaingloriously about one's own duties.
- adinatva अदीनत्व (SS III 53), freedom from depression, one of the characteristics of a true *yogi*. A true *yogi* never feels depressed.
- adṛśyakaraṇa अदृश्यकरण (SS III 64), see antardhāna.
- adṛśyatā अदृश्यता (TBU I 50), Oblivion (absence from the mind altogether). The yogī is advised to relegate all dṛśya to complete oblivion by realising that it is all unreal. The meaning is that the yogī should not see things, but see brahman and brahman alone everywhere.
- adṛṣṭa अবৃষ্ট (SK 30), knowledge other than perception or sensation-representative as opposed to presentative cognition. In such knowledge buddhi², ahaṅkāra², manas² and indriya¹ function only kramaśaḥ ক্লম্য:

- (successively), while in presentative cognition they may work *kramaśaḥ* क्रमशः (one after another) or *yugapat* युगपत् (simultaneously).
- adṛṣṭajanma अदृष्टजन्म (YS II 12), future life. A karmāśaya, according to *Patañjali*, may result in action in the present life or in a future life.
- adṛṣṭvigraha अदृष्टिवग्रह (BY II 61), invisible form. Oṃkāra is considered to be adṛṣṭavigraha since it has no form. adeśakāla अदेशकाल (BY XVII 22), improper place and time. The place is said to be improper when it is unholy and populated by unrighteous persons and time is said to be improper when it is full of inauspicious zodiacs. Adeśakāla is declared to be tāmasika and hence unsuitable for dāna.
- adroha अद्रोह (BY XVI 3), absence of the attitude of injury or violence towards others. One of the twenty-six divine qualities (cf. daivi-sampat).
- advaya अहय (ATU 1, 3), the one and the Reality (= only brahman). Advayatārakopaniṣad अद्वयतारकोपनिषद् is a teaching about advaya, which can only be described negatively by eliminating everything that can be thought of. That which remains after excluding everything and denying reality to everything is the brahman. It cannot be positively defined; because it is neither this, nor that, nor anything else; yet it is and it is the Supreme Reality. Whoever sees that Reality in a light standing out before him, even

when his eyes are closed, becomes that Reality. This is the essence of the teaching of this *upanisad*.

advayatva अद्भयत्व (G 100-1), becoming one with. According to the monistic writers on yoga⁴, when a yogī reaches the highest rung of the ladder in his discipline he becomes one with the supreme Reality-brahman-as milk does when poured in milk, ghee in ghee, and so on.

adveṣṭā अहेष्टा (BG XII 13), one who does not have malice towards anyone, even against those who are harmful to oneself.

advaita अद्वेत (HP IV 4), brahman-the one Ultimate Reality. See advaya.

adhaḥ अव: (SK 44), the lower of the two ends in the scale of living beings, the upper one being **ūrdhva**. At the lowest end of the scale is *stambha*, the upper most is **brahmā** the highest of gods. A life of **adharma** leads one towards the lower end.

adhaḥśakti अधःशक्ति (SSP IV 16), one of the three forms of kuṇḍalini-śakti, the other two being the madhyaśakti and urdhvaśakti. For the attainment of yogic summum bonum all three stages of kuṇḍalini need to be awakened. Adhaḥśakti which is located in mulādhāra, when uncontrolled, i.e. dormant, is responsible for the incessant functioning of senses causing various anxieties and worries to an individual. adhaḥśakha अधःशाख (BG XV 1), (tree

adhaḥśākha अध:शाख (BG XV 1), (tree with) branches below. This is a

metaphorical expression. The world is compared with a tree, of which **brahman** is the root and intellect, ego, five subtle elements are its branches (cf. **ūrdhyamūla**).

adhama अधम (G 48, 49; TSM 104-5; GS V 55-6), one of the three stages of progress made by a $yog\bar{i}$ in the practice of prāṇāyāma2. The duration of adhama prānāyāma² according to G, is said to be 12 mātrās¹. Siddhasiddhāntapaddhati elaborates "dvādaśa mātrās¹" by laying down twelve om² mātrās¹ for pūraka¹, sixteen for kumbhaka¹ and ten for recaka. This would mean a total of thirty-eight omkāra mātrās. According to Vācaspati Miśra, however, mrdu prānāvāma² extends over a total of thirty-six mātrās1. According to Laksmi Nārāyana, the prānāvāma² pandits prescribe twelve mātrās for each pūraka¹, recaka and kumbhaka¹. This also comes to thirtysix mātrās¹ in adhamaprāņāyāma² (Bālaprabodhinī 105). Mārkandeyapurāṇa मार्कण्डेयपुराण prescribes the same measure for laghu prānāyāma² and Lingapurāṇa लिङ्गप्राण for nīca नीच (lower) prāņāyāma2, Adhamaprāṇāyāma² is accompanied by much perspiration (G 49; TSM 104-5).

Practice of **prāṇāyāma**² generates heat, which sometime bring about perspiration. The important characteristic of **prāṇāyāma**² is therefore, producing heat in the body and not perspiration. Perspiration is secondary.

According to TSM, adhama prāṇāyāma² has the merit of protecting the yogī from disease and destroying his sins. According to GS, adhama is one of the three grades of sahita-kumbhaka³, which means the same thing as one of the three grades of prāṇāyāma².

adharma-1 अधर्म-१ (SK 44; VB II 15), vice, one of the eight bhāvas². It is a disposition to perform sins (SK). According to SK, the consequence of dharma is a rise towards a daiva (divine) and of adharma fall towards tiryak (animal) jāti. This latter is gamanamadhastāt adharmeṇa गमनमध्रस्तात् अधर्मेण (living a life of adharma one falls).

According to Patañjali, if a karmāśaya is apuņya its phala would be paritāpa. Obviously, the kṛṣṇa-karmas (unrighteous deeds) would gather apuṇya. According to Vyāsa, parapīḍā परपीडा (causing pain to others) would be a kṛṣṇakarma. He believes that adharma is reaped by causing pain to others.

Patañjali's theory is that in so far as a karmāśaya is a puṇya or an apuṇya it is a karmaphalāśaya as distinguished from karmavipākāśaya. The law of karmavipāka is a scientific psycho-physical law; but that of karmaphala does not seem to be so, if phala is not only the hedonic tone of the vipāka. But it may be that vipāka alone is determined by karma and that

phala is just the natural pleasantness or unpleasantness of the **vipāka**, without being governed by a different law. According to Patañjali, however, the law of **karmaphala** is different. It is a supernatural moral law.

adharma-2 अधर्म-२ (BG IV 7, XVIII 31-2), karmas prohibited by the scriptures; actions antagonistic to varṇa and āśrama and also detrimental to the prosperity and salvation of the beings is adharma.

adhastātkuñcana अधस्तात्कुंचन (HP II 46), mūlabandha¹. It is characterised by a vigorous contraction of the anal region and is one of the three bandhas⁵ by practising which prāṇa⁴ is made to ascend along the susumnānādī².

adhidevatā अधिदेवता (SS V 116; TSB 8), presiding deity. The presiding goddess of the viśuddhacakra¹ is in SS called śākinī शाकिनी. The twelve presiding deities of the twelve aṅgas⁴, according to TSB, are niśākara निशाकर, caturmukha चतुर्मुख, clik दिक्, vāta वात, arka अर्क, varuṇa वरुण, aśvi अश्वि, indra इन्द्र, upendra उपेन्द्र, prajāpati प्रजापित, and yama राम

adhimātra अधिमात्र (YS I 22), (of) highest degree, one of the three degrees of tīvrasaṃvega, the other two being mṛdu and madhya. Adhimātra is thus the highest degree of saṃvega, (intensity) for the achievement of samādhi.

adhimātraka अधिमात्रक (SS V 15, 21), one of the stages at which those who

practice $yoga^1$ are found. The adhimātraka yogī possesses the following characteristics: determination, unwavering perseverance, independence, strength, truthfulness, courage, mature judgement, faith, devotion to $guru^2$ and absorption in the pursuit of $yoga^1$. Such a $yog\bar{i}$ is superior to the mrdu and madhya ones: but inferior to the $adhim\bar{a}tra\ yog\bar{i}s$.

adhimātratamayogi अधिमात्रतमयोगी (SS V 23-27), the most advanced $yog\bar{i}$ who is here said to possess the following characteristics: immense strength, enthusiasm, a pleasing countenance, great courage, knowledge of the sacred texts, perseverance, freedom from attachment and agitation, youthfulness, moderation in eating, selfcontrol, fearlessness, cleanliness, cleverness, charity, dependability, competence, firmness, intelligence, contentment, forgiveness, strength of character, virtue, aversion to ostentation, sweet speech, faith in the holy books, devotion to gods and gurus², love for aloofness, freedom from all chronic constitutional diseases, knowledge of the duties of adhimātra yogīs, and proficiency in every kind of yoga1.

adhivāsa अधिवास (ABU 22), abode, - here that in which everything has its being, - the Ultimate Reality. **Brahman** is in this sense the abode of all beings and can be said to reside in everything.

adhiṣṭhāna-1 अधिछान-१ (SK 17). One of the proofs of the existence of puruṣa¹

given in this kārikā is that every sanghāta must have an adhisthāna and that adhisthana is a purusa1. Gauda-pāda interprets adhisthāna as control-ler, on the analogy of the controller (the driver) of a chariot and by sanghata he seems to understand the living body. However, puruşa1 alone is not the controller of the living body. The cont-roller of the body is the whole entity which transmigrates; while the purusa1 sought to be proved in this kārikā is that kūtasthanitya (everlasting) with which every linga² is in samyoga. Puruşa¹ is one member of that whole, the other member being liṅga¹.

adhiṣṭhāna-2 अधिछान-२ (BG XVIII 14), seat, base, loci and medium. Here the body is considered to be the medium of expression and experiencing the desire, hatred, pain, happiness etc. According to Gītā, adhiṣṭhāna is one of the five means for the successful performance of action.

adhodhāraṇā अधोधारणा = pārthivī-dhāraṇā पाधिनीधारणा = bhuvo-dhāraṇā भूनोधारणा (GS III 70-1; G 69), the dhāraṇā of which the object is prthivī¹. This tattva³ is to be imagined inside the chest, along with the figure of brahma, for two hours and prāṇa⁴ is to be retained there all the while along with citta¹. This dhāraṇā is said to be stambhakarī (that which stabilises) and to lead to the conquest of the earth. adholiṅga अधोलिंग (BVU 80), one of the

three points for having meditation on, other two being **ātmaliṅga** and **jyotir-liṅga** (cf.). **Adholiṅga** is described to be situated in **mūlādhāra**. It is also technically termed as **vairājatattva**.

adhyayana अध्यन (SK 51), study. Īśvarakṛṣṇa reckons it among the eight siddhis³. But from the context, it is clear that siddhi³ in this kārikā does not mean "extraordinary acquisition", but "means of attaining success". Study is as necessary for successful persistent effort in any direction as are reasonableness, listening to the talks of the learned people, finding a true friend, charity and freedom from all the three kinds of pain.

adhyavasāya-1 अध्यवसाय-१ (SK 5), knowledge. *Prativiṣayādhyavasāya* प्रति-विषयाध्यवसाय would, therefore, mean sensory perception which is **dṛṣṭa¹** as explained by Īśvarakṛṣṇa.

adhyavasāya-2 अध्यवसाय-२ (SK 23), deciding, determining by which the antaḥkaraṇa buddhi¹ arrives at truth. Hence the statement: buddhi¹ is adhyavasāya.

adhyātma अध्यात्म (VBh I 47; BG VIII 3), adhi + ātma, that which has being in the ātman. Here, intellect, i.e. intellect has being in ātman. Understanding of the individual self indentical with the Supreme Reality, the brahman, is adhyātma.

adhyātmacetas अध्यात्मचेतस् (BG III 30), consciousness of oneself as the servant of iśvara.

adhyātmaprasāda সংঘান্যমান (YSI47), prakāśāvaraṇakṣaya সকায়ালিয় দাধ্যম (removal of the veil hiding light-cf. YS II 52, III 43). The idea is that by nature one should be able to know everything, but owing to the element of tamas² in our make-up, we remain ignorant of everything except that which our citta¹ vṛttis² reveal to us. This veil of darkness is removed by several yoga⁴ practices. One of which is nirvicārā samāpatti.

adhyātmavidyā अध्यात्मविद्या (BG X 32), knowledge that liberates. The best among the fourteen varieties of vidyā (knowledge) recognised by the Indian tradition.

adhyāropa अध्यारोप (SS I 72), attributing qualities; Attributing qualities to brahman is like attributing "being a snake" to a rope. This is one of the methods used by the *Vedāntins* in discourses on brahman, who is said to be indescribable.

According to this text, this is also one of the methods used by the 'yogīs' for convincing themselves that all is māyā and that the all-pervading brahman is the only Reality.

adhyāsakalpanā अध्यासकल्पना (SS I 42), the commom error of superimposition, which the *yogīs* have to correct by their yoga⁴ (cf. adhyāropa).

adhvabheda अध्वभेद (YS IV 12), difference of time, i.e. between anāgata, vartamāna and atīta dharmas¹. Past dharmas are atīta, potentialities of

dharmas¹ to appear in the future anāgata, and dharmas1 which are actually present vartamana. According to Patañjali, they are all real. This reality, however is metaphysical. From the practical point of view, only the vartamāna is real, as this alone actually exists. According to Vyāsa, the atīta dharmas¹ exist as those experienced before and the anagata ones as those which are to be experienced in future. The vartamana (present) dharmas1 alone are those which are being actually experienced. As atīta, vartamāna and anāgata dharmas¹ do not all exist simultaneously there is no adhvasankara अध्वसंकर (mixing up of dharmas¹ differing in time); though the after-effects (samskaras) of the past, and the potentiality of the future are as real as the present happenings. This is Patañjali's theory.

ananta-1 अनन्त (ABU 9; VB II 47), eternal. One of the qualities by citing which the indescribable **brahman** is inadequately described. According to VB, **āsana¹** facilitates **samāpatti** on eternity or whatever is an eternal reality.

ananta-2 अनन्त-२ (YS II 34, 47), very long time. Long lasting pain and ignorance result from perpetrating hiṃsā etc.. Āsana¹ makes a very long samāpatti possible. Anantasamāpatti therefore means a longlasting samādhi¹.

 Anantasamāpatti, according to this commentator, is samāpatti on ananta³.

ananyacetā अनन्यचेता (BG VIII 14), one whose consciousness is identified with none other than 'that', i.e.,**īśvara** (Lord *Kṛṣṇa*)

ananyayoga अनन्ययोग (BG XIII 10), yoga of absolute surrender, the synonym for 'apṛthak samādhi' as given by Śaṅkara. Ananyayoga consists in unwavering conviction that there is no other being higher than Lord Vāsudeva and He alone is the sole refuge.

anapekṣa अनपेक्ष (BG XII 16), one who is free from desires. Absence of worldly desires related to body, mind and senseorgans.

anabhisneha अनिभस्नेह (BG II 27), nonattachment even towards one's own body. A quality of the sthitaprajña.

anabhiṣvaṅga अनभिष्यंग (BG XIII 9; VB II 40), absence of empathy of (cf. abhi-ṣvaṅga). As a result of the practice of śauca (one of the niyamas), one loses the attachment towards one's body and becomes more and more conscious about one's self only.

anargala अनर्गल (HP II 75), unobstructed.
The suṣumnā becomes quite clean
(free from any obstruction) when
kundalinī¹ is aroused.

anala-1 अनल-१ (YTU 84), fire, - one of the live elements. In the human body, its seat is supposed to be-from the region of the anus to the chest. It is said to be triangular in shape and red in colour. Its symbol is the letter $\overline{\tau}$ "ra" which is its **bījamantra**. Its presiding deity is **rudra** (**Śiva**).

anala-2 अनल-२ (BG III 39), that which is unappeasable. 'na asya alam paryāptiḥ vidyate iti analaḥ: Since passions (kāma) are unappeasable, they are called anala.

anala-3 अनल-३ (BG VII 4), refers to 'anala tanmātrā', a synonym for 'rūpa tanmātrā'.

anala-4 সনল-४ (HP II 52), gastric fire in the body.

anala-5 अनल-५ (HP III 65), heat sensation. As a result of the practice of mūlabandha, apāna reaches the region of fire, i.e. the navel region, and a heat sensation is felt along the back.

analadhāraṇā अनलधारणा = āgneyīdhāraṇā आग्नेयीधारणा = vahnidhāraṇā वहिनधारणा = vaiśvānarīdhāraṇā वेश्वानरीधारणा (GS III 61; G 71; YTU 91-94), one of the five mahābhūtadhāraṇās. It consists in holding anala in its sphere in the body for two hours while meditating on rudra. By the practice of this dhāraṇā the yogī's body becomes fireproof. G prescribes vaiśvānarī dhāraṇā on teja (light) in the tālu and GS that in the nābhi. According to YTU, the sphere of anala extends from the region of anus to the chest.

analaśikhā अनलशिखा (HP III 65), flame of anala, when by means of mūlabandha¹, apāna² is raised to the seat of anala, the flame of this fire is fanned

and gets bigger. The meaning seems to be that heat increases and is felt to be rising upwards.

anavaccheda अनवच्छेद (YS I 26, III 53), not limited by, conditioned by, related to.

anavadhāraṇa अनवधारण (YS IV 20), impossibility of cognising both one's own nature and the nature of other object-in one and the same moment.

anavasthāna अनवस्थान (SK 7), not giving any consciousness to an objectordinarily described as not attending to an object-which is not a psychologically correct description; as one can be conscious of an object without giving attention to it. Attention is more intense consciousness. An object may not be perceived altogether, although it is present to sense if one's consciousness is not directed to it. This happens when one's consciousness is completely absorbed by something else. When consciousness skips over an object in this way that is anavasthana so far as that object is concerned.

anavasthitatva अनवस्थितत्व (YS I 30), instability, - tendency to fall from the stage of development which has been attained. It is one of the nine antarāyas mentioned by *Patañjali*.

anaśnat अनश्नत (BG VI 16), one who does not eat at all. Yoga is possible neither for anaśnat nor for atyaśnat. The yogī is advised to take a moderate diet (cf. mitāhāra). Śaṅkara quotes the following verse with regard to the

quantity and quality of the diet of a yogī- ardhamaśanasya savyañjanasya tṛtīyamudakasya tu/vāyoḥ sañcāraṣṇā-rthaṃ tu caturthamavaśeṣayet // "Half (the stomach) for solid food and condiments, one-quarter of the stomach for water and the fourth quarter be reserved for the free movement of the air."

anākhya अनाख्य (YKU I 60), one of the ten vighnas in the way of yoga¹. Of these seven vighnas are the same as mentioned by Patañjali (cf. antarāya). Nidrā³ here seems to correspond to Patañjali's styāna and anākhya to his anavasthitatva. Viṣaya² is the tenth vighna added by YKU. Why the name anākhya is given to this vighna is not clear. Literally the word may mean that which cannot be described, or that which they call respiration. Reference may be to the accelerated rate of respiration of those who are not calm. anāgata अनागत (YS II 16, IV 12), future,

nāgata अनागत (YS II 16, IV 12), future, Patañjali believed past and future, like the present, to be the qualities of dharmas¹. All dharmas¹ are real according to him and so are their qualities. VB (IV 12) explains the existence of anāgata dharmas¹ as vyaṅgyena svarūpeṇa व्यंपेन स्वरूपेण (in a potential state). Potentialities of dharmas¹ are thus anāgata dharmas¹. Dharmas¹ which were once present but are no longer present, though their effect is seen on the present dharmas¹, are the atīta dharmas¹. Thus dharmas¹ differ

from one another in respect of their being past, present or future just as they differ in other respects. This is their adhvabheda.

anādi-1 अनादि-१ (ABU 9), having no beginning-one of the qualities in terms of which the indescribable **brahman** is often described.

anādi-2 अनादि-२ (VB II 1, 13; SS III 2), coming down from times immemo-rial but not endless. Most of our karmāśayas and vāsanās are anādi in this sense formed early in this life or in some previous life.

anādi-3 अनादि-३ (YS IV 10; VB II 15, 17, 22; SS II 39), original -innate, not formed as the after-effect of behaviour or consciousness; hence beginningless in this sense-not in the sense in which saṃyoga is. Some vāsanās too are anādi in this sense; i.e., not formed in this or a previous life.

anādi-4 अनादि-४ (BG X 3, XIII 19, 31), beginningless, uncaused. **Īśvara** is said to be anādi. Prakṛti and puruṣa -two forms of **īśvara** are beginningless and so they are referred to as anādi, causeless, imperishable.

anādyapiṇḍa अनाद्यपिण्ड (SSP I 20, 21), beginningless substance. Synonym for paramātman. Five qualities of anādyapiṇḍa have been enumerated. It is akṣaya, abhedya, acchedya, adāhya, and avināśī.

anāmaya-1 अनामय-१ (VU I 15), literally absolutely free from unhappiness, here the pain which samyoga and the

consequent cycle of births and deaths imply- hence **brahman**, the very opposite of anything born of the ninty-six **tattvas**³ enumerated in this text.

anāmaya-2 अनामय-२ (BG II 51), free from all turmoils, conditionings, bondages like birth etc.. The state of mokṣa or liberation.

anāmā अनामा (SSP I 4), having no name. Synonym for unmanifested parabrahman.

anārjava अनार्जव (SS III 37), duplicity in behaviour, which a $yog\bar{i}$ is advised to eschew.

anārambha अनारम्भ (BG III 4), without performance. Without performing action one cannot attain actionlessness. The actions referred to here are sacrificial rituals, to be performed in this or next life to destroy (overcome) the deposited demerit and to purify the heart. Smṛṭi declares that it is through action that demerits are destroyed and thereby knowledge is revealed (MB, Śāntiparvan 204.8).

anālasya अनालस्य (SS III 28, V 95), untiring effort. According to this text, if Kumbhaka³ is practised untiringly for three months without a break nāḍiśuddhi is achieved and all siddhis³ come without delay to the yogi who, at the same time, worships śiva inside him everyday without fail.

anāvṛtti अनावृत्ति (BG VIII 23, 26), nonreturning. One who has realised one's self does not return to the cycle of birth and death. The path of knowledge leads towards the non-returning of the soul to the cycle of birth and death.

anāśaya সনায়ৰ (YS IV 6), not carrying any karmāśayas. The dhyānaja cittas¹ are not laden with karmāśayas, because they have had no previous births. Nor do their actions, which are neither śukla nor kṛṣṇa, leave any after effects behind.

anāśin अनाशिन् (BG II 18), indestructible, eternal. Characteristic of ātman.

anāśrita সনাপ্নিন (BG VI 1), disinterested, taking no shelter in or recourse to (the fruits of action).

anāhata-1 अनाहत-१ = anāhatacakra अनाहतचक्र (G 60-61; SS V 114; YKU III 10-11; YSU I 173, V 9) one of the six cakras¹ mentioned by G. It is said to have twelve spokes and to be situated in the chest. It is called purnagiri pītha by YSU. According to G (82, 86), hrtpadma is one of the five cakras¹. Its seat is the hrdava (chest) and it is here that the three-fold-bound mahāsvanah महास्वनः vrsa वृष (roaring bull) laments. The bull in this stable (body) who laments his lot is obviously jīva¹ (G 28) who is bound by the three gunas¹. The anāhatacakra¹ may be the cardiac plexus. SS calls this cakra¹ a pankaja (lotus) and speaks of its twelve petals, named k क्, kh ख्, g ग्, gh घ, \dot{n} ङ, c च, ch छ, j ज, jh झ, \tilde{n} ञ, tਟ੍ਰ, and th ਰ gives it a deep-blood colour. It has the **bijamantra**³ of **vāyu**² on it and is a very pleasant spot to contemplate.

anāhata-2 अनाहत-२ (GS V 76), not produced by one thing striking against another-not produced by a vibrating object. The various kinds of noise (timbre) heard in the state of **bhrāma-rīkumbhaka**³ are those of an **anāhata** sound. HP (IV 70) calls these sounds sweet like the jingling of ornaments. According to this text (IV 100) and GS (V 82), the perfect *yogī* hears an **anāhata śabda**. Blended with this sound he also sees the **jyoti¹** which is **caitanya** and merges his **manas²** in it. That is the final beatitude *viṣṇoḥ* paramaṃ padam.

anāhatakalā अनाहतकला (SSP II 5), (having dhyāna on) suṣumnā (which is in between iḍā and piṅgalā in the kaṇṭha-cakra) is called anāhatakalā. anāhāra अनाहार (ANU 27), fasting. The ṛṣi advises yogīs to avoid frequent fasting.

aniketa अनिकेत (BG XII 19), one who has no fixed residence. A *yogī* is called aniketa, who considers the whole world to be his home (unattached with any particular place).

anitya अनित्य (SK 10; YS II 5), not permanent. As compared to avyakta and puruṣa¹, vyakta is called impermanent by Īśvarakṛṣṇa.

According to *Patañjali*, among other things, **avidyā** consists in believing impermanent objects to have a permanent reality.

aniyatavipāka अनियतिवपाक (VB, VM II 13), having fruition (of karma) over

an indefinite period of time. This indefinite fruition of **karmas** has three courses: (1) the destruction of the action done, (2) merging with major actions, or (3) remaining dormant. Fruition may be either certain, limited by time (**niyata**) or uncertain, not limited by the time (**aniyata**).

anirodha अनिरोध (HP II 9), without (much) suppression of the impulse (of exhalation). One should hold the breath (during prāṇāyāma) without suppressing the impulse (anirodha) to exhale, i.e., one should not hold the breath going beyond one's own capacity.

anila-1 अनिल-१ = vāyu वाय = mārut मारुत = prāna प्राण = pavana पवन (HP) I 48; YTU 92; SS V-160), something which is felt by the $yog\bar{i}s$ as rising up the back and on which they can concentrate whenever they like. It is a matter of tactual sensations only. If these sensations are concentrated in the head, then according to YTU, the state of kumbhaka ensues spontaneously and the $yog\bar{i}$ sees a light in the head. Concentration on that light is called by this text saguna dhyana and infusion of agni¹ into the vāyu¹, which is thus taken on the head, is called paricaya. If a $yog\bar{i}$ succeeds in raising this paricitavāyu along with citta2 this would be the arousal of his kundalini. The mahābhūtadhāraṇā महाभूतधारणा, according to this Upanisad, consists in carrying this vayu1 to five different parts of the body and concentrating on the god there, reciting the mantra³ bija of the tattva (mahābhūta) which is supposed to be located in that part. HP calls this vāyu apānānila. According to SS, practice of ugrāsana excites movement of anila inside the body and destroys dullness. Writers on yoga⁴use the word vāyu¹ and all its synonyms in this sense.

anila-2 अनिल-२ (SS III 43; TSM 97), air. Yogīs are advised to eat when the right nostril is taking in and throwing out air; in other words, when we are breathing through the right nostril.

anila-3 अनिल-३ (SS III 54), the āyurvedic vātadoṣa বানরাঘ. Those who are wellversed in yoga do not suffer from vātadoṣa. Vāta, pitta and kapha are generally translated as humours; though they differ essentially from the humours of the Greeks.

aniṣṭa (karmaphala) अनिष्ट (कर्मफल) (BG XVIII 12), a variety of karmaphala. Action performed with the desire yields three-fold fruits depending on its nature. Aniṣṭa is one of three type of karmaphalas. The other two karmaphalas are iṣṭa and miśra. Śańkara explains aniṣṭa (karmaphala) as befalling into hell and animal species etc.

anīśvaraguṇa अनीश्वरगुण (BY VIII 32), evil tendencies (can be removed through dhyāna).

anugra अनुग्र (SS V 77), without hyperfunction; in other words, functioning normally. The nāḍis through which prāṇa² flows should function normally, i.e. their functioning should be neither excessive nor deficient. Prāṇa² would not flow through them if the nāḍās² get ugra (abnormally stimulated).

anupalabdhi अनुपलिख्य (SK 8), absence of perception. **Pradhāna** is imperceptible because it is too subtle for perception. But from the fact that it is not perceived, it does not follow that it does not exist.

anubhāva अनुभाव = anubhava अनुभाव (ABU 7; SS V 49; GS V 12), experience. The realisation of the asvara brahman, who is not expressed by om² or by any other symbol for that matter, is a true experience. This experience is not that of bhāva, although it is not of a concrete object. The author of ABU emphasises the view that realisation of brahman is not a cognition, because it is not a subject-object relation; all the same, it is real experience.

anumāna अनुमान (YS I 7, 49; SK 4), reasoning. It is a one of the three **pramāṇas**. **Anumāna** and **āgama²** are not *viśeṣārtha* বিशेषार्थ, i.e. they have to do with abstract thought and free ideas (as opposed to percepts, images and tied ideas).

According to SK, the other two **pramā**-**ṇas** are **dṛṣṭa¹** and **āptavacana¹**, and, according to *Patañjali*, **pratyakṣa** and **āgama²**. That which is not perceived is inferred from that which is perceived and an imperceptible object which can not be known by inference either may

be known by **āptavacana** (testimony of a competent authority).

anulomaviloma अनुलोमविलोम (GS V 53), in one way and then in the reverse way and so on in alternate order, here first inhaling with the left nostril and exhaling with the right, then inhaling with right and exhaling with the left, and so on. GS prescribes this order of inhalation and exhalation for his sagarbha sahita¹ prāṇāyāma².

anuśāsana अनुशासन (YS I 1), posterior systematic presentation of a discipline. The word 'anuśāsana' as used here suggests that Patañjali is giving only a systematic presentation of yoga discipline handed over to him by a long tradition. In the later yogic literature, we find Yājñavalkya saying, 'hiraṇyagarbho yogasya vaktā nānyaḥ purātanaḥ' (BY XII 5). This thesis has been accepted by VM, VBh (I 1) in their commentaries (cf. atha).

anuśravika अनुश्रविक (YS I 15; SK 2), that which is not perceived or known by experience but is told by the authorities. The means of warding off pain which are prescribed by the śāstra शास्त्र are also like those based on experience, because they too do not yield perfect, everlasting and unsurpassable freedom from pain (SK). Patañjali speaks of sources of pleasure which are not perceived but are mentioned by the authorities; e.g. svarga स्वर्ग (heaven).

anusandhāna-1 अनुसन्धान-१ = anusandhi अनुसन्धि =antaḥ-padārthavivecana

अन्तःपदार्थविवेचन (ATU 2, 4, 5, 9, 10; YSU II 21; TBU I 40). This is a peculiar psychological phenomenon which resembles the introspection of an image. But the object which is atten-ded to be anusandhāna, is neither a memory image, nor a primary image, nor an after-sensation; nor is it a sensum, or a percept, or a constructive image. While ATU speaks of rupa-nusandhana (attending to the light seen) only, other texts speak of nadanusandhāna³ also. The anusandheva is not a memory-image, because it does not correspond to any sensum or percept which could have left behind the possibility (potentiality) of imagining such an object; and it is not therefore referred to any past experience. It is neither accompanied by what some psychologists call a mark of familiarity, nor with the idea or the feelling that the object was experienced before. In Vyāsa's language, it is not determined by samskāra left behind by a previous experience.

The anusandheyas are not primary memory images, though they may have the vividness of eidetic images. They are neither revivals of former perceptions, nor are they confined to the eidetic children. Although more intense than primary memory images, the objects observed by anusandhāna are obviously not after-

sensations. They last much longer and are not traceable to any previous sensa of which they may be the after-images. These sensa-like objects observed by antardrsti (visual anusandhāna) are not actual sensa or percepts, as they are observed when the eyes are not being stimulated; and they are too simple to deserve the name 'constructive images'. Moreover, constructive imagery is ultimately based on memory-images. Anusandheyas are not memory images in any sense. The objects observed by anusandhana can, however, be localised as images can be. An anusandheya may be localised at a spot inside the body of the person. Such spots are called dhyānasthānas by Goraksa. But these objects lack the "flow and flicker" which is the characteristic of images; and in this respect they are more like sensa than images.

According to TBU, there is no $p\bar{u}j\bar{a}$ पूजा (worship) superior to anusandhāna. The best devotee is the person who is blessed with nādābhivyakti, -divyaśabdasaṃvit दिव्यशब्दसंवित् of Vyāsa - so that he may concentrate on that. Nor is there a mantra superior to nādābhivyakti which is the yogī's own experience. According to Patañjali, anusandhāna would be attending to a viṣayavatī pravṛtti, though he has not used the word anusandhāna. TBU mentions absence of anusandhāna as an obstacle in the path of yoga¹.

anusandhāna-2 अनुसन्धान-२ (TSB 6), the function of citta². It appears that according to this text the function of citta² is to think of carrying out what buddhi³ has decided. This is anusandhāna².

anusandhāna-3 अनुसन्धान-३ (HP IV 81,105), complete concentration. HP attaches the greatest importance to samādhi¹ (= samāpatti in an internally aroused sound) and calls it nādānusandhāna. Svātmārāma considers this to be the fourth and the culminating aṅga of haṭhayoga, which for him is a synonym for yoga.

anusandheva अनसन्धेय (ATU 9), object of anusandhāna - a sensum-like object experienced by a yogi without a sensory stimulation, e.g., a light seen or a sound heard without the eye or the ear being stimulated by an external light or sound. Patañjali would call such an experience as rising of a visayavatī pravrtti. An anusandheya is a psychological object of consciousness like an image, as opposed to a real object of consciousness which exists in the outside world and can be perceived. Psychological objects cannot be perceived. They can only be introspected. They exist in the antarākāśa (inner space) as opposed to bāhyākāśa (outer space) in which real objects exist.

An **anusandheya** can be a **mūrti** (figure). But there are also objects of **anusandhāna**³ which have no form. For observing a **mūrti-anusandheya**, a part of the physiological apparatus of

sensation is availed of, though even a mūrti-anusandheya does not stimulate a sense organ. The indriya4 which is necessary for observing a murtianusandheya is, therefore, the corresponding sensory part of the central nervous system including the sensory centres of the cortex. For observing an anusandheya which is not a mūrti, neither a sense organ, nor any part of the nervous system is to be brought into play. Yet an indriya2 in another sense is used. This is not a material indriva. It is one of those indrivas² which are not destroyed when the body is destroyed. According to the ancient Hindu belief, they go along with the soul. According to Tśvarakṛṣṇa, they constitute that part of the transmigrating individual which is not the puruşa1. Light is an example of murtianusandheya. Amūrtyanusandheya cannot be illustrated. A mūrti anusandheya is the vişaya¹ of Patañjali's vişayavatī pravṛtti and its anusandhāna. If it is a light, it is the same thing as tejodhyāna of Gheranda. According to Patañjali, while images arise and quickly subside, without staying in consciousness for any length of time, the vişaya1 of pravrtti1 stays. anūdakī अनुदकी (BY VI 22, 24), a religious ritual, the 'sandhya' which is referred to is not only without water, but also devoid of smearing and annointing. Its technique consists in meditating on iśvara accompanied with a

sound (nāda) resembling prolonged resonance of the bell (dīrgha ghaṇṭāni-nādavat) arising due to the purification of the soma, sūrya and agni (iḍā, piṅgalā and suṣumnā), ushered in the space of heart by piercing through the granthis (aṇḍa) having the form of the rays of the sun. This sandhyā is said to purify the bhūtas (animate beings) and destroy the worldly existence (for the performer).

anaiśvarya अनेश्वर्य (NGB I 2), inability to fulfil any desire. The rajas and the sattva aspects of citta, when overpowered by tamas, result into the inefficiency of the functioning of citta, making it powerless to fulfil any desire. This is the effect of the mūḍha state of citta.

anta अन्त (HP IV 86), terminal (stage). By attaining samādhi through contemplation on nāda an indescribable joy comes to the yogīs in the form of internally aroused sound in the body. In the final stage, i.e., anta, of this nādānusandhāna practice, sounds resembling these of tinkling of small bells, flute, vīṇā and the hummingsound of bees are heard. This may be equated with the last stage of nādānusandhāna, i.e., niṣpatyavasthā

antaḥkaraṇa अन्तःकरण (SK 33, 35; TSB 6), internal organ. SK and ancient Hindu thinkers in general consider manas², buddhi¹ and ahaṅkāra⁴ to be antaḥkaraṇas, but TSB brackets

ahankāra4 with as many as four other organs, all of which may be taken to be internal-organs. They are: jñātṛtva, manas, buddhi3 and citta2. Antahkarana is in this way one of the five internal organs of which the visaya is jñāna¹. Jñāna¹ here appears to include imagining, remembering, thinking, etc. The English translation of antahkarana as internal-organ is not an accurate rendering, because all the karanas, according to ancient Hindus, are subtle. They do not die with the body. And not being parts of the body, they cannot be appropriately called organs. However, they are organs in the sense that the transmigrating soul makes use of them and the antahkaranas are internal as compared to the ten indriyas1 which are directed towards external objects, including one's own body and its movements.

The antaḥkaraṇas are directed towards the psychological objects presented to them by the indriyas. Those writers, like $Vy\bar{a}sa$, who speak of eleven indriyas and not of thirteen karaṇas obviously take manas¹ to be the only internal organ. Strictly speaking, the antaḥkaraṇas are mental functions and the abilities corresponding to them. They are given substantive names and understood as entities only to facilitate thinking and arguing about them. A concrete name helps understanding.

antaḥkaraṇadharma अन्तःकरणधर्म (NGB

I 24), **kleśa** etc. are said to be attributes (**dharmas**) of **antaḥkaraṇa**. According to $N\bar{a}goj\bar{i}$, **antaḥkaraṇa** stands for **citta**.

antaḥkaraṇapañcaka अन्तःकरणपंचक (SSPI43), manas, buddhi, ahaṅkāra, citta, and caitanya are said to be the five elements that constitute the antaḥkaraṇa (the internal organ). It is interesting to note that citta (cf. antaḥkaraṇadharma) which is on par with antaḥkaraṇa is regarded here as one of the components of antaḥkaraṇa.

antaḥpadārthavivecana अन्तःपदार्थविवेचन (ATU 10), anusandhāna¹.

antaḥprajña अन्तःप्रज्ञ (BY II 23), one of the three components of **triprajña** which is synonym of **oṃkāra** (cf. **triprajña**).

antaḥśuddhi अन्त:शुद्धि(BY VIII 27), internal purification. Through nirodha (prāṇāyāma), vāyu is stimulated; from vāyu agni is generated and from agni ap is generated, as a result of which one is internally purified.

antaraṅga अन्तरंग (YS III 7), subjective, inner. Of the eight yogāṅgas, according to Patañjali, yama, niyama, āsana¹, prāṇāyāma² and pratyāhāra are bahiraṅgas while dhāraṇā, dhyāna and samādhi¹ are antaraṅgas. Bahiraṅgas of yoga¹ are of the nature of regulating overt behaviour. They are directed towards living beings or lifeless objects in the outside world. Dhāraṇā, dhyāna and samādhi¹-the antaraṅgas-are only mental discipline.

The terms antaraṅga and bahiraṅga are, however, relative; since *Patañjali* considers nirbīja samādhi⁵ to be an antaraṅga as compared to dhāraṇā, dhyāna and samādhi¹.

antarākāśa अन्तराकाश (VS IV 3), internal void in the heart region. For the sake of dhāraṇā, concentrate on bāhyā-kāśa combined with internal void (antarākāśa) within one's own heart is suggested.

antarāya-1 अन्तराय-१ (YS I 29, 30), non-conducive factors for or in the yogā-bhyāsa. They are vyādhi (disease), styāna, saṃśaya, pramāda, ālasya, avirati, bhrāntidarśana, alabdha-bhūmikatva and anavasthitatva. These are, called the nine antarāyas by Patañjali. They are so many hindrances which Patañjali considers to be setbacks in the practice of yoga¹. He has prescribed recitation of om² and contemplation of God, for overcoming these obstacles and getting set on the path of yoga¹ again.

antarāya-2 अन्तराय-२ (HP V 24), obstacles (arising out of improper yoga practice). Svātmārāma has said in (HP V 5) that due to the wrong practice (of prāṇāyāma), the vāyu goes astray, (and) not finding its way (forward), accumulates at one spot which in turn causes several types of diseases which create obstacles in the path of yoga. However, in the context of Svātmārāma's HP, the concept of antarāya can be generalised so as to mean any hurdle

or impediment for successful **yoga** practice (cf. HP I 15).

antarjala अन्तर्जल (BY I 26-29), a mode of performing different obligatory sacred duties. It is performed while standing in the water.

antardṛṣṭi अन्तर्वृष्टि = antarikṣaṇa अन्तरीक्षण (ATU 2-10), visual anusandhāna.

antardhāna अन्तर्धान (YS III 21), becoming invisible. Objects are visible to an eye when there is samprayoga (connection) between the eye and the light which is reflected by those objects, i.e., when light reflected by the objects stimulates the eye. If this connection is severed, the objects become invisible. According to Patañjali, if a yogī practises saṃyama on the light which is reflected by his body - kāyarūpa - the connection between this light and the eyes of the percipients (other people) is severed and thus the yogī becomes invisible.

antardhauti अन्तर्धोति (GS I 13-14), one of the four kinds of dhautis. The object of performing dhauti is said to be purification of the body. Antardhauti consists of vātasāra, vārisāra, vahnisāra and bahiṣkṛta. Thus, there are four kinds of antardhauti. One characteristic feature of antardhauti is that, while the other dhautis can be performed by everybody with advantage, antardhauti can be performed only by the person who has learnt these processes from a teacher

and has acquired the necessary skill. It consists in cleaning the lower half of the alimentary canal chiefly the intestines.

antarlakṣya अन्तर्लक्ष्य (HP IV 36; ATU 5, 13; MBU 1 (3) 6, (4) 1, 4, II (1) 1). The object of pūrvatārakayoga, localised somewhere inside the yogī's body which may be the head, the middle of the eyebrows, or the chest is called the antarlakṣya. The antarlakṣya of śāmbhavīmudrā is, however, described (HP) as being of the nature of jvalajjyoti ज्वलज्योति (burning light) seen in the sahasrāra.

Cijiyoti चिज्ज्योति (light of Reality) and turīyacaitanya (Supreme Reality) are also included among the antarlakṣyas by yogīs of some schools. Turīyacaitanya is said to be localised above the head (A. Mahādeva Śastrītranslation of ATU).

In manaskatārakayoga the yogi sees an internally aroused light. This is called by various names: antardrsti, visual anusandhāna or antahpadārthavivecana, antarīkṣaṇa. Seeing this light the $yog\bar{i}$ knows the **brahman** and this unmixed knowledge of brahman is the essence of amanaskayoga. The light which is seen by manaska yoga is also seen as brahman; but seeing that light as brahman is the manaska (mental) knowledge of brahman. The realisation of brahman as brahman without any representation amanaska yoga.

According to MBU antarlakṣya is one of the three kinds of tārakalakṣyas (objects of concentration in tāraka-yoga), the other two being bāhya (external) and madhya (neither inside the yogī nor far from him).

andhatāmisra अन्धतामिस्र (SK 48; VB I 8), one of the five viparyayas which lead to bandha¹. These five viparyayas are identified by VB with the five kleśas of Patañjali, one of whichabhiniveśa-is said to be andhatāmisra.

annamayakośa अत्रमयकोश (TSM 12; SS I 97) one of the five kośas (i.e. aspects of a living being). The annamayakośa, being the strictly material aspect of living beings, is none of their physiological, mental, intellectual or spiritual aspects. It is the purely physical aspect of living beings.

According to *Triśikhibrāhmaṇo-paniṣad*, all the other **kośas** rest on the **annamayakośa** as its **rasas** do in the fruit; and according to SS, the body of a living being is formed out by **annamayakośa** of the father.

anya अन्य (YS, VB, VM, VBh, AP I 18), Vyāsa takes anya to mean asamprajñāta which he considers a variety of samādhi and equates with nirbīja samādhi. This is accepted by VM, VBh and AP. But, Dr. P.V. Karambelkar in his commentary of YS holds that anya should be interpreted not as asamprajñāta but as other than samprajñāta, i.e., totally indescrib-

able. The experience gained in this region falls far short of description. Moreover, according to him, the **samprajñāta** or **anya** should not be considered as varieties of **samādhi**, rather they are regions of inward journey and its experience. (See for details Dr. Karambelkar's Commentary on Yogasūtras, published by Kaivalyadhāma, 1987, pp 40-50).

anyatākhyāti अन्यताख्याति (YS III 49), complete discernment into the difference of (sattva and puruṣa). The realisation of clear distinction of the puruṣa principle from sattva (prestine state of citta) results into complete control over all the states of citta as well as over those of all the living beings and non-living things and ability to have all knowledge. This anyatākhyāti is the result of various saṃyamas referred in YS III 35, 38, 43, 44, 47 and 48.

anyatvakāraṇa अन्यत्वकारण (VB, VM II 28), cause of differentiation, one of the nine causes that are enumerated by *Vyāsa*. The goldsmith, who by making different ornaments from gold introduces separateness in the material cause, i.e. gold, is said to be the cause of the otherness or differentiation.

anyathājñāna अन्यथाज्ञान (G 90), knowledge of the other (upādhi) than 'That'. While explaining dhyāna, Gorakṣa makes a distinction between upādhi and tattva. That knowledge of upādhi is here referred to as anyathājñāna vis-a-vis tattvajñāna (cf.). anyaviṣaya अन्यविषय (YS I 49), having (totally) different object. Here it is said that rtambharā-prajñā is having object totally different from the objects of knowledge arising from scripture and inference. Thus anyaviṣaya refers to puruṣa.

anyasaṃskārapratibandhī अन्यसंस्कार-प्रतिबन्धी (YS I 50), preventer or remover of all other saṃskāras (subliminal impressions or residual potencies). The trance cognition nullifies all the previous knowledge which is based on the saṃskāra collected heretofore.

anvaya-1 अन्वय-१ (YS III 9), being in-here being while nirodha (absence of citta² vṛttis) lasts. Niruddhacitta is called by *Patañjali* nirodhapariṇāma.

anvaya-2 अन्वय-२ (YS III 44), lingamātra, mahat. This guṇaparva (stage of differentiation in guṇas¹) is called anvaya because viśeṣa and aviśeṣa guṇaparvas have their being in it. Grahaṇa³, sthūla², svarūpa², asmitā² and sūkṣma⁴ all take shape and exist in it. Saṃyama on this is therefore prescribed by Patañjali for a conquest of aindriya ऐन्द्रिय (immaterial) as well as of bhautika भौतिक (material) reality. anvaya-3 अन्वय-३ (YS III 47), homogenity

or relatedness. One of the five- fold aspects of each and every element. Other four are sthūla, svarūpa, sūkṣma and arthavattva. Anvaya here refers to the three characteristics, viz. khyāti (sattva), kriyā (rajas), and sthiti (tamas). The saṃyama on anvaya combined with saṃyama on

other four aspects of elements leads to **bhūtajaya** (mastery over elements).

ap

ap अप् = jala जल (TSM 136, 143; TSB 5, 6, 9; VB III 44), water, one of the five mahābhūtas, Śabda, sparśa, rasa, rūpa and gandha are, according to TSB, its aṃśas¹ (cf. Upaniṣadbrah-mayogī) and are said to rest on it. Citta² of which 1/8th part is of each of the other four mahābhūtas and 1/2 is ap, is said to reside in the ap and to exit in the form of ap (cf. Upaniśad-brahmayogī). The five aṃśas¹ of ap are not explained by this rśi. Perhaps he means both the tanmātrās of this name and the corresponding sensua.

Part of the body from the knees to the hips is said to be the seat of ap. This text prescribes dhyāna on ap in this region as it does on the other mahā-bhūtas in the other parts of the body. Ap is described in TSM as being of the form of half moon, white and silvery and the ap region of the body is called ap-sthāna (place).

apakva अपक्च (YSU I 25, 26), one of the two kinds of men. Apakva men are yogahina योगहीन (those who have not practised any yoga), jaḍa (devoid of knowledge) and pārthiva (those who identify themselves with their gross bodies). It is by yoga alone that they become paripakva. Without yoga neither their knowledge of truth nor of duty can bring them mokṣa. Yoga alone can liberate them from the misery consequent upon acquiring a gross form. This is the teaching of YSU.

apathya अपथ्य (HP I 59), unwholesome food. During the practice of yoga one should consider the selection of proper food. Svātmārāma classified two types of food, wholesome (pathya) and unwholesome (apathya). Bitter, sour, pungent, salty or hot, green vegetables, sour gruel, oil, mustard, alcohol, fish, meat, curds, butter-milk, berries, oilcakes, asafoetida, garlic etc. are said to be unwholesome diet. Besides, even wholesome food becomes unwholesome if heated over again, is dry, excessively salty or sour.

aparampara अपरम्पर (SSP I 16), one of the five causes of the manifestation of 'anādyapiṇḍa', refers to the combination of animate and inanimate (jaḍa and caitanya). Other four causes are paramapada, śūnya, nirañjana, and paramātmā.

aparavairāgya अपरवैराग्य (VM, NGB I 5), vairāgya has been classified into two types, aparavairāgya and paravairāgya. Aparavairāgya, has again, been classified into four stages-yatamana, vyatireka, ekendriya, and vaśikāra. Vaśikārasamjñā is the advanced stage of aparavairagya. The first three mediocre vairāgva are of not much significance, for in these stages there is always a fear of getting reinvolved in worldly things. Vaśikāra refers to complete subjugation of all the desires which are to be enjoyed through various senses. This is culmination of aparavairāgya.

aparāntajñāna अपरान्तज्ञान (YS, VB, VM III 21), knowledge of death. The aparāntajñāna is the result of the saṃyama on sopakrama and nirupakrama karma.

aparigraha-1 अपरिग्रह-१ (YS II 30, 39; SS V 68; YSH I 32, 33, II 106-110), not possessing any property of any kind. All worldly possessions have to do with our present life. We neither bring them with us nor carry them to our next life. Hence when we completely detach ourselves from them, we get inquisitive about our past and future existence. Arising of this eschatological inquisitiveness is called janmakathantāsambodhah by Patañjali. It accrues from being firmly established in aparigraha. YSH considers possession of property to cause pain and therefore advises aparigraha. This Jaina text distinguishes between outer and inner aparigraha. An attitude of complete detachment (renunciation) towards the objects of sense- sabda⁴, sparśa, rūpa², rasa¹ and gandha⁴ is called inner aparigraha.

aparigraha-2 अपरिग्रह-२ (BG VI 10), abandoning all the possessions. A yogi should abandon all possessions which work as hindrance in the path of yoga. Aparigrahāḥ = yogapratibandhaka saṅgraharahitāḥ (Śāṅkara-bhāṣya on BG).

apariṇāmitva अपरिणामित्व (YS IV 18), not being subject to change or motion. Puruṣa does not undergo any change whatsoever. Nevertheless, He knows (introspects) the **vṛtti** of his **citta**³, which are always changing, and always knows those **vṛttis** irrespective of their **adhvabheda** (being past, present or future).

aparidṛṣṭa अपरिवृष्ट (VB, VBh III 15), not perceivable (through senses). One of the two abilities of citta. Other one is paridṛṣṭa. Those objects that are not perceivable through senses and hence cognised through inference are called aparidṛṣṭa. Vyāsa enumerates seven such objects. These are: (1) restricted state of mind (nirodha), (2) virtues and vices (dharma), (3) subliminal impressions, (4) change, (5) life, (6) volition and (7) power.

aparinirmitavaśavartinaḥ अपरिनिर्मित-वशर्वितनः (VB III 26), a class of gods residing in the mahendraloka. They enjoy all the eight siddhis³ as do the other denizens of this loka.

aparoksasiddhi अपरोक्षसिद्धि (SAU I (7) 42-3), immediate realisation of the Self. seen as clearly as daylight. The method prescribed for attaining it is as follows: "Place the left heel below the genitals, place the right foot on the left thigh, inhale to the full, let the chin touch the chest, contract the anus, think of your true Self, and do not let it slip out of the focus of consciousness as long as possible". This technique is a combination of āsana, prānāyāma², jālandhamūlabandha1 rbandha, and dhāraṇā.

apavarga-1 अपवर्ग-१ (SK 44), release, liberation. The necessary consequence of jñāna¹ is liberation. The word mokṣa is often used in this sense. Its opposite is bandha⁴.

apavarga-2 अपवर्ग-२ (YS II 18), dṛśya¹ of the citta¹ whose asmitā¹ is not udāra (active). It is a dṛśya¹ towards which the attitude of indifference is adopted by the citta¹ as opposed to dṛśya¹ taken as bhoga, i.e. the dṛśya¹ motivated by asmitā¹. Dṛśya¹ becomes apavarga² when asmitā¹ gets inactive. It remains bhoga so long as the kleśa asmitā¹ remains active.

apavāda अपवाद (BY IV 72), mispronunciation. Not reciting savitṛ according to the prescription of the *Vedas*.

apasthāna अपस्थान (VS IV 6), the region of ap (water) in the body. The human body from the toes to the cerebrum has been divided into five regions, depending on the dominance of each gross elements for the purpose of the practice of dhāraṇā. From knees to anus has been stated as the region of water (acquas spot).

apāna-1 अपान-१ (VB III 39; GS V 60; SS III 4, 7; SAU I (4) 12-13; G 24; TSB 5), one of the ten autonomic reflexes called life-activities. They are said to be samastendriyavṛtti समस्तेन्द्रियवृत्ति (joint function of all the indriyas²) by Vyāsa and sāmānyakaraṇavṛtti सामान्यकरणवृत्ति (joint function of all the karaṇas) by Īśvarakṛṣṇa. The function of apāna¹ is said to be apanayana अपनयन (carrying

downwards) by VB. **Śrapaṇa** (generating heat) is consi-dered to be its function by TSB, digestion by SAU, and elimination by *Yogataraṅgiṇi*.

These autonomic functions are referred to as $v\bar{a}yus^1$ in Ancient Indian texts and are said to be life-activities performed through the $n\bar{a}d\bar{i}s^1$. The sphere of work of $ap\bar{a}na^1$ is said to extend down to the soles by VB, and the anal region by GS and SS. SAU considers the $ap\bar{a}na^1$ region to extend from the navel to the knees.

apāna-2 अपान-२ (HP I 48; G 24-29, 37, 52; GS III 34, 45; YKU I 65; SS IV 38, 65; DBU 69; YCU 40), a series of internally aroused cutaneous sensations which are experienced by *yogīs* as something which they call **vāyu**⁴ or **prāna**, rising up along the back.

It appears that the lower reaches of this rising stream of cutaneous sensations is generally referred to as apana² and the higher reaches (in the upper part of the back) as **prāna**³; and one popular description of yoga4 is the union of these two. According to HP, DBU and YCU, if a yogi dies raising apana² again and again and mixing it with prāna³ he attains the supreme knowledge and gets liberated. The same verse is cited in all the three texts. GS appears to hold that inhalation by kākī mudrā moves the prāna³ and the mock exhalation brings up the apana² so that the two may meet and blend. There is complete cessation of breathing so long as there is no exhalation. This operation is considered by GS to be a part of **yonimudrā** as well as of **śakticālanī-mudrā**.

apāna-3 अपान-३ (VS II 42, 45, 51; III 2, 36; BG IV 29), one among the five prominent vayus. It pervades the penis, anus, thighs, abdomen, waist and the root of navel region. Excretion of waste-matter from the body is main function of apana. This has also been considered noxious to life. According to BG, that which moves downward is called apana. For the sake of conquering vāyu (prāṇa), Vasistha suggests that one should draw apanavayu upward and fix it at the place of fire (vahnimandala or nābhisthāna) and then closing of the ear etc., by both hands. It generates a pure nāda which in turn leads to vāyujaya.

apānakrūratā अपानकूरता (GS I 41), malfunctioning of apāna (due to unclean rectum). Apāna³ is responsible for excretion of waste material from the body. The improper functioning of apāna³ gives rise to many disorders. Thus Gheraṇḍa suggests the cleansing of the rectum (mūlaśodhana) to rectify the improper functioning of apāna.

apānordhvaproccāraṇa अपानोध्वंप्रोच्चा-रण, (protsāraṇa प्रोत्सारण) (HP I 48; YCU 40). According to these texts, first the baddhapadmāsana pose is to be assumed and then a tight jālandharabandha. Then, the yogī is asked to raise the apāna² in all its fullness again and again. Doing so, the *yogī* attains infinite knowledge by dint of **śakti**-the **kuṇḍalinīśakti**-provided that at the same time he tries to meditate on the One Supreme Reality.

apārthakam अपार्थकम् (SK 60), without deriving any benefit for herself.

Prakṛti² is supposed by Īśvarakṛṣṇa to work solely for the benefit of the puruṣa¹ without deriving any benefit for herself.

apunarāvṛtti अपुनरावृत्ति (BG V 17), nonre-embodiment. Those who fix their consciousness in **brahman** and attain the highest knowledge wash out the causes responsible for embodiment and hence there is no re-embodiment.

apuṇya अपुण्य (YS II 14), an ethically bad action. (cf. puṇya).

apaiśuna अपेशुन (BG XVI 2), 'paiśuna' is calumny and apaiśuna is the absence thereof. One of the twenty-six divine virtues (daivī sampat).

apodhāraṇā अपोधारणा = vārunī dhārana वारुणीधारणा = vārinī dhārana वारिणीधारणा = āmbhasī dhāraṇā आम्भसीधारणा (GS III 60; G 70; YTU 88-91), dhāraṇā on ap. G prescribes vārinīdhāranā on this tattva (element) situated in the kantha. According to YTU, however, the region of ap extends from the knees to the reproductive organs, and this text claims for apodhāraṇā freedom from every sin and immunity from injury or death resulting in any form from water. aprakāśa अप्रकाश (BG XIV 13), lack of discrimination due to preponderance of tamas.

apratistha-1 अप्रतिष्ठ-१ (BG XVI 8), unsteady, not governed by laws such as good and evil.

apratiṣṭha-2 সমনিত্ত-২ (VB I 30, III 38), instability. *Vyāsa* says, while explaining the 'anavasthitatva-antarāya, the instability as the incapacity of the mind to continue in the particular state which has been attained. When the stability is acquired, it leads to the state of trance (samādhi).

apratisankrama अप्रतिसंक्रम (VB, VBh I 2; YS, VB, VBh IV 22), immutable, without movement. The consciousnesspotential (citiśakti-puruṣa) is actionless, i.e. without movement, for activity is due to triguṇas which are transcended by puruṣa and that is the reason why it does not move towards objects whereas buddhi (intellect) which is of the nature of guṇas and therefore active, moves towards objects in order to grasp them.

aprabuddha সমন্ত্ৰ (TBU I 11), that which cannot be known. Brahman can be attained by the $yog\bar{i}s$, though it cannot be known in the way all of us know things.

aprameya अप्रमेय (BG II 18; BY XII 40), beyond pramāṇas. The self cannot be determined by any valid source of knowledge, for the self is considered to be aprameya or pramāṇātīta as well as self-determined. Vedas are considered to be aprameya, i.e., unascertainable. aprayojaka अप्रयोजक (YS IV 3), nonstimulator, not causing innate or inherent tendencies to act. The efficient cause or in this context yogī's desire is verily not the stimulating factor responsible for the another birth or birth in other species.

aprāyatya अप्रायत्य (BY VI 30), state of apathy. To subdue this state Sage Yājñavalkya suggests to take bath with mantras or mārjana, i.e., sprinkling of water with the sacred Vedic chants.

aprīti अप्रीति (SK 12), mental agitation-a characteristic of rajas. Peace and agitation seem to be quite irrelevant at the comparatively less differentiated levels of prakṛti. As opposed to aprīti, prīti and viṣāda are the characteristics of sattva² and tamas respectively.

aphalaprepsu अफलप्रेप्सु (BG XVIII 23), not longing for the fruits of action, The person who performs action with this attitude is known to be a sāttvika.

abindu अजिन्दु (YSU VI 66), the all-pervading brahman, also called dhruvatāraka ध्रुवतारक, in this upaniṣad. abhāva-1 अभाव-१ (ABU 4, 7; SK I, 8), disappearance. When a yogī's self disappears in the state of sannirodha सित्ररोध (restraint), he attains the highest state-beatitude. Atmano'bhāva आत्मनो-भाज reminds one of the types of svarūpaśūnyatā स्वरूपशून्यता of YS (III 3), which is the distinguishing feature of samādhi and of tatsthatadañjanatā तत्स्थतदंजनता (YS I 41), i.e., samāpatti. abhāva-2 अभाव-२ (SK 9, 14), impossibi-

lity. Everything from everything is an impossibility. According to SK, as everything cannot come out of everything, **prakṛti¹** cannot come out of **puruṣa¹**. A thing can be produced only from that in which it is potentially already there. This is the theory known as **satkāryavāda**. Neither is everything potentially present in everything else, nor is **prakṛti¹** potentially present in any **puruṣa¹**. This is the **Sāṇkhya** view

abhāva-3 अभाव-३ (YS I 10), non-existence as an object of knowledge in its own right. Abhāva is considered to be one of the seven categories by many Vaiśeṣika philosophers, and this abhāva appears to be the object of Patañjali's nidrā cittavṛtti. According to these thinkers it is something positive, not a mere absence of everything.

abhāvitasmartavya अभावितस्मर्तव्य (VB I 11). In the waking state when we are imagining, we know that we are imagining and it is not perception, but we take our dream images to be percepts. Images of the waking state are called by Vyāsa abhāvitasmartavya as opposed to which dream images are called by him bhāvitasmartavya. This is Vyāsa's psychology of smṛti.

abhikramanāśa अभिक्रमनाश (BG II 40; BY XI 2), efforts futile. Usually the efforts discharged in achieving anything may go waste (abhikramanāśa), but efforts discharged in yoga never go unrewarded. abhiniveśa-1 अभिनिवेश-१ (YS II 3, 9), an innate tendency, common to all men and animals, which prompts life-saving actions. The wise and the intelligent have it just as much as the lowliest of creatures. Only yogīs can escape it. They do not cling to life as all the rest of us do. Abhiniveśa is mentioned by Patañjali as one of the kleśas which reside in the citta¹. All the innate reflex actions are in the last resort prompted by abhiniveśa, as they are self-preservative. Abhiniveśa is the bandhakāraṇa बन्धकारण in YS III 38.

abhiniveśa-2 अभिनिवेश-२ (VB, VM, VBh, II 3, 9), one of the five kleśas. In all beings there is self-benediction that 'would I never cease to live', 'to exist', 'may I live'. According to Vyāsa, such a will helps us in inferring the phenomenon of past life, for he who has not experienced the agony of previous deaths will not have 'will to live' (abhiniveśa). This affliction of 'love of life' is found in every being.

abhibhava अभिभाग (SK 7,12), overpowering, dominating. It is one of the four ways in which the works of sattva, rajas and tamas are related to one another. When the work of one guṇa¹ dominates over that of the other two, or anyone of them, the relation between them would be abhibhava. In this way, abhibhava, āśraya, janana and mithuna would not be of guṇas¹ with one another but of their works: prakāśa, pravṛtti, niyama, prīti, aprīti, viṣāda. When guṇa completely

dominates over another it hides the latter, which then becomes imperceptible.

abhimāna-1 अभिमान-१ (TSB 6; TSM 16; SK 24), self-consciousness-the kārya (function) and the viṣaya (psychological object) of the ahaṅkāra, aṃśa of ākāśa (TSB). It is on account of this that sadāśiva becomes a jīva. Abhimāna is supposed to be the same thing as ahaṅkāra by SK. In human beings it takes the form of idea of the self, in the context of which budhhi³ exercises her choice and voluntary actions are performed. Mc Dougall has called it by the names like self-regarding sentiment and self-respect.

abhimāna-2 अभिमान-२ (BII 6), synonym for asmitā, one of the kleśas.

abhivyaktikāraṇa अभिव्यक्तिकारण (VB, VM II 28), the cause of manifestation. One of the nine varieties of causes enumerated by *Vyāsa*. Manifestation means the placing of an object under certain conditions such as light etc. so that it may help in the act of perception of form, colour, intensity etc. either by means of senses or by the act of the mind itself.

abhiṣvaṅga अभिष्वंग (BG XIII 9), too much attachment. Identifying oneself with the object (cf. anabhiṣvaṅga).

abhyāsa अभ्यास (YS I 12, 13, 32; SK 64; G 90; SS III 44-5, 92, 93), practice Patañjali thinks that success in elimination of cittavṛttis can be achieved by abhyāsa and vairāgya and

defines abhyāsa as the effort directed towards this goal. Abhyāsa in this context seems to mean nothing more than practising cittavrttinirodha again and again with perseverance. Monistic Vedāntists like Gorakṣa distinguish between our ordinary knowledge, which is all wrong on account of avidyā (called upādhi by G), and our realisation of the truth (tattvasamsthiti तत्त्वसंस्थिति). According to them, so long as man remains under the spell of avidyā, he behaves like a jīva1. But when the same person realizes the truth by practising **yoga**¹, which G here calls constant abhyāsa, he ceases to behave like an ordinary man. Īśvarakṛṣṇa, however, does not seem to have used the word abhyāsa for yogābhyāsa. At least he does not say so.

abhyāsayoga-1 अभ्यासयोग-१ = suṣumnāyoga सुषुम्नायोग = kuṇḍalinīyoga कुण्डलिनीयोग (YSU I 125, 126), effortfully taking vāyu up the suṣumnā. This yoga consists first in moving the kuṇḍalinī and then rousing it. It appears that the kuṇḍalīcālana कुण्डली-चालन of this Upaniṣad is the same performance as sarasvatīcālana सरस्वतीचालन of YKU and śakticālana of GS.

The rising **vayu** is reported to be felt as an object rising along the back to the head and is supposed to pierce all the **granthis**.

abhyāsayoga-2 अभ्यासयोग-२ (BG VIII 8, XII 9), yoga of constant practice. This practice consists in withdrawing thoughts from all quarters and fixing the mind again and again on one particular object. **Abhyāsayoga** is therefore, of the nature of steadfastness of mind acquired by constant practice.

amanaska अमनस्क (MBU I (3) 1, 4; III (I) 2, 3, 5; V 8; ATU 8; HP IV 4), disappearance of aindriya activity (cf. indriva). In this state there is an entire destruction of manas1, and if, destroying his manas, the yogi gets merged in the paramātman परमात्मन्, this state is called amanaskayoga. The amanaska state of śambhavimudra is samadhi and brings iñāna (knowledge) and ānanda³. ATU and BVU both divide yoga into tārakayoga and amanaskayoga, and ATU calls its yoga4 to be tārakavoga. Thus the name of the whole is given to one of its parts. HP does not consider the amanaska-to be essentially a state of dhyana in the sense of concentration of mind. It considers the state of jīvanmukti to be amanaska.

amara अमर (VB III 26), the longest lived denizens of the **janaloka**.

amaratva अमरत्व (HP IV 3), freedom from the cycle of birth and death. HP holds that samādhi², which may be called rājayoga, is not necessarily a state of amaratva. If the amaratva state is reached, the yogī gets liberated from the bondage of life and death. How long he may continue to exist in his present human body is immaterial. This state goes by a number of names: sahajāva-

 $sthar{a}$ सहजावस्था, j $ar{i}$ vanmukti, paramapada.

amaravāruṇi अमरवारुणी (HP III 46, 48), secretion from the candra, situated on the left side in the region below the spot between two eye-brows (Brahmā-nanda's commentary). This secretion is said to be drawn out by the heat generated as a result of the tongue entering that cavity as a part of khecarīmudrā.

amarī अमरी (HP III 93), = amaravāruņī अमरुवारीणी = cāndrī चान्द्री. For amarolī one has always to imbibe amarī through the nose inside and at the same time to practise vajrolīmudrā.

amarolī अमरोली (HP III 93). If vajrolī is practised regularly accompanied with imbibing amarī from the inside of the nose, it becomes amarolī.

amātra अमात्र (ANU 31), non-bhautika भौतिक or bhūtātmā. According to SK, the mahābhūtas are made up of the tanmātrās (SK 22). Amātra (literally, without any tanmātrā) should thus mean non-bhautika भौतिक. In Patañjali's language, it would mean non-aindriya, or it may be puruṣa¹, which is neither bhautika nor aindriya. Upaniṣadbrahmayogī takes amātra to mean brahman which is said in this Upaniṣad to be the proper object of cintana चिन्तन (dhyāna).

amādṛṣṭi अमादृष्टि (MBU II (I) 6), one of the three dṛṣṭis¹ adopted for seeing the tārakalakṣya. Seeing the tārakalakṣya with eyes closed is called amādṛṣṭi. amāvāsyā-1 अमावास्या-१ (YKU III 1, 2), meditation with closed eyes. This is prescribed during the day or when the yogī finds it difficult to keep the eyes open without winking. (See pratipat and pūrṇimā, which are the other two positions of the eyes during meditation. Also see amādrsti).

amāvāsyā-2 अमावास्या-२ (DU IV 43), prāna³ reaching the confluence of idā¹ and $pingala^1$. When $yog\bar{i}s$ experience a series of cutaneous sensations in the back, they perceive something rising up, sometimes on the left side and sometimes on the right. When these sensations change their location from the right to the left side, in their own esoteric language the yogis call this phenomenon uttarāvana and when they experience a shift from the left to the right side they call it daksināyana. When, however, the prāna³ (name given to the content of this experience) is felt at the spot where the $id\bar{a}$ and pingalā nādīs meet (at the level of the eyebrows), it is called amāvāsyā.

amūrtanāda अमूर्तनाद (DBU 102), nāda (sound) having no distinct form. This sound is produced out of the middle of the viṇādaṇḍa, i.e., vertebral column, attached to the suṣumnā, resembling the resonance of the conch and the like. Synonym of 'anāhatanāda'².

amūrtitāraka अमूर्तितारक (ATU 10; MBU I (3) 1), one of the two kinds of objects of tārakayoga. Amūrtitāraka is described as bhrūyugātīta भूयगातीत. But

at the same time it is said to be known by manas² aided by cakṣu¹, just as mūrtitāraka is known. The difference between the two is that the eye used for amūrtitāraka is not the physiological eye, neither the retina, nor the visual centre of the brain, but the cakṣurindriya, which is not bhautika in any sense and is a constituent of Patañjali's citta¹, which is aindriya viśesa (= S.K.'s sūksma viśesa).

In addition to the *cakṣurindriya*, the physiological eye is also needed to see externa objects and **mūrti anusandheyas**. The physiological eye is not required for the **anusandhāna** of the **anusandheyas** which cannot be sensed.

amūrtimat अमूर्तिमत् (ATU 11), incorporeal. Uttaratārkayoga involves meditation on a great beam of radiance (imagined to be over the root of the palate) which is said to be incorporeal or formless in nature (cf. uttaratārakayoga).

amṛta अमृत (GS III 33, 62, V 44; G 44, 57, 64, 65, 83), nectar-the liquid which, according to Gorakṣa, flows from the candra¹ in the throat (57, 58). It is because this amṛta is swallowed up by the sūrya in the nābhimūla नाभिमूल (navel) that one dies. Gheraṇḍa places the candra in the tālumūla, though he does not say that amṛta oozes from it, he also speaks of amṛta being swallowed up by the sūrya². According to Gorakṣa, this amṛta should neither

be permitted to go to sūrya² nor to be consumed by candra¹ itself. The yogī should consume it if he or she wants to be immortal (G 56). Gheraṇḍa prescribes māṇḍukī mudrā for absorption of this amṛta by the yogī and considers a contemplation of this flowing amṛta to be effective in what he calls nāḍīśuddhi (cleansing of the nāḍīs). Brahmānanda places candra¹ in the ājñācakra. (cf. amarī amaravāruṇī and cāndrī).

amṛtakalā अमृतकला (SSP II 18), a particular type of secretion oozing from uvula (ghaṇṭikā). This is attained through placing of the upper part of the tonuge on uvula and meditating (dhāraṇā) upon ghaṇṭikādhāra- one of the sixteen ādhāras (cf. śoḍaṣādhāra) which results in secretion of amṛtakalā.

amṛtatva अमृतत्व (ATU 6), immortality.
The person who sees rays of light, shining like burning gold, at a height of twelve inches above his head, attains amṛtatva. (See bahirlakṣya). By amṛtatva the ancient Hindus generally understood freedom from the cycle of birth and death-not death alone. In this context, by life the ṛṣi ऋषि means the mundane mortal life.

amṛtasthāna अमृतस्थान (DBU 40), bhrū-madhya, lalāṭa (forehead) and nāsikāmūla नासिकामूल (root of the nose) are here said to form the amṛtasthāna. It is called the great home of brahman. Probably the reference is to a single

spot-the **bhrūmadhya** of *Gorakṣa*-contemplation on which and the deity residing there are highly esteemed.

ambu अम्बु (G 70), one of the five tattvas¹ (mahābhūtas). Ambu is supposed to reside in the kaṇṭha. It is said to be white and has in it viṣṇu, and pīyūṣa (nectar) and is associated with sound of va (च). It resembles the eighth moon. Dhāraṇā on this tattva³ is called vāruṇīdhāraṇā. It is the element ordinarily known as water (cf. ap).

ayuktābhyāsa अयुक्ताभ्यास (HP II 16), improper practice. Improper practice of prāṇāyāma (specially here of nāḍiśodhana prāṇāyāma) leads to several diseases such as hiccup, asthma, cough and pain in the ear, head and eyes. Improper practice consists in performing pūraka, and recaka hurriedly, without following the alternate breathing pattern as prescribed by Svātmārāma and practising kumbhaka beyond one's own capacity etc. (cf. yukta).

ayugapat अयुगपत् (SK 18), separate (= individual = of each his or her own). The pravṛttis² of each person are his or her and as the pravṛttis² are individual and private, and as nobody shares the pravṛttis² of others, there must be a plurality of puruṣas². This argument appears, however, to be flimsy. The pravṛttis are of the individual who transmigrates (bhāvairadhivāsitalingam भावेरधिवासितिलंगम्) and is said to be mahadādisukṣmaparyanta

महदादिसृक्ष्मपर्यन्त. They are not of the purusas1 and they do not prove a plurality of purusas1, but only of lingas². The same thing applies to janana, marana (death) and karana¹. All these are of the individual who is triguṇātmaka त्रिग्णात्मक (made up of the three gunas). How can these individual differences prove the existence of many purusas¹, who are not gunātmaka ग्णात्मक (having the nature of the gunas)? Perhaps a link is to be supplied to complete the argument. This link is found in SK 55, according to which, along with his linga², the purusa¹ with which it has a samyoga also goes through the painful experiences of death and old age; and as these experiences are different for each individual, there must be as many purusas¹, who experience pain, as there are individuals in the world. These are the avidyāvān अविद्यावान purusas2 who mistakenly consider the pravrttis² of the cittas¹ to be their own pravrttis². ayutasiddhavayavasamuha अयुत्तसिद्धा-वयवसमृह (VB III 44), a combination of which the components do not have a separate existence, e.g. an animal-body or a tree, of which the members do not exist separately as do the individuals who form a social group or the trees which form a forest. The five mahābhūtas - the guṇātmaka गुणात्मक (made up of the gunas) reality at the svarūpa level - are each an ayutasiddhavayava combination of a matter and its form.

e.g. fire and heat, which do not exist separately and independently of each other.

ariṣaṭka अरिषट्क (VU I 10, 11), six enemies, viz., lust (kāma), anger (krodha), greed (lobha), delusion (moha), infatuation (mada), and spite (mātsarya). These are the famous ṣaḍripus.

ariṣṭa সহিছ (YS III 22), evill omen (of death). The knowledge of death (aparāntajñāna) can be got through ariṣṭas, i.e., evil omens. Omens here are known as fore-warnings (of the death of a person).

arundhati अरुन्धती (HP III 1, 15), kuṇḍalini.

arka-1 अर्क-१ (TSB 8), the sun. One of the twelve gods who reside in the twelve nāḍis¹ in the form of prāṇa¹.

arka-2 अर्क-२ (SS III 43), sūrya² (the piṅgalānāḍi).

arci জৰ্ঘি (ANU 37), flame of fire. **Vyāna** is supposed to be of the colour of fire, i.e., bright ochre.

artha-1 अर्थ-२ (YS I 43, 49, III 3, 11, IV 23), content of a cittavṛtti or a samāpatti which may be viśeṣa or sāmānya (concrete or abstract). Since citta's merging in its artha in the state of dhyāna is samāpatti, dhyāna itself becomes samāpatti and assumes the state of samādhi when the citta² loses itself in the object of its consciousness. artha-2 अर्थ-२ (SK 17, 58), in order to =

for facilitating. Men and animals work

automatically as if for getting rid of the

uneasiness caused by a psychological need. Similarly by virtue of the avyakta² becoming vyakta, puruṣa² works automatically for facilitating kaivalya of the puruṣa¹ who is one of his components.

artha-3 अर्थ-३ (YS II 18, 21-2, III 44, 47, IV 32, 34), that which is cognised by a citta² as an object or a whole made up of objects, or is seen by a puruṣa¹. As every puruṣa¹ sees his citta, the citta¹ is said to be his dṛśya³. Whether an artha³ is of the nature of bhoga or apavarga² for citta¹ depends on the absence or presence, respectively, of vivekakhyāti in the citta¹; the former makes it bhoga, the latter apavarga.

artha-4 अर्थ-४ (YS I 28, 42, III 17, 35; SK 73), meaning. Om, to the *yogī* who recites this mantra, means God (YS I 28), and vikalpa is defined by *Patañjali* as knowledge of the meaning of a word which is spoken or in some way perceived or called to memory. In YS I 42 the words śabda, artha and jñāna are significant. They point to the meaning of the word vikalpa used there.

Inability to distinguish between **sattva** and **puruṣa¹** implies **bhoga**, because a wrong meaning (parārtha) is given to these words-**sattva** is taken to be **puruṣa¹** and **puruṣa¹** to be **sattva**. If **saṃyama** is performed on their correct meaning (**svārtha**), then the successful yogī comes to know about the presence of such an entity as **puruṣa¹**, which is

absolutely different from citta1 (YS III 35). Sound (**śabda**), meaning (artha⁴) and knowledge (jñāna) make up a single whole. By performing samyama on them, as distinct from one another, the $yog\bar{i}$ can learn the language of the species to which those living beings belong (YS III 17) who make that sound. As for example, if a yogi can distinguish between (1) the sound which stimulates his ears when he hears a bird chirping, (2) the significance, or meaning, of that sound to other birds, and (3) whatever knowledge he gets, and he performs samvama on themeach as distinct from the others-he learns the language of that species of birds. This is *Patañjali's* idea, and it may be his experience too.

artha-5 अर्थ-५ (SK 13, 63, 65, 68-9), purpose. Kaivalyārtha केवल्यार्थ means 'for the purpose of kaivalya', niyamārtha नियमार्थ 'for the purpose of niyama, and arthataḥ अर्थतः 'purposive'. In kārikās 68 and 69, artha clearly means bhoga and apavarga¹, which Īśvarakṛṣṇa considers to be the purpose of puruṣa¹ served by prakṛṭi. Arthavaśāt means; because the purpose has been achieved i.e. puruṣa² no longer mixes up puruṣa¹ and liṅga¹ (SK 65).

artha-6 সর্থ-६ (SK 72), subject-matter. The entire subject matter of the Sāṅkhya Kārikās is that which was the subject matter of Ṣaṣṭitantra ঘচ্टিনন্র. This is claimed by Īśvarakṛṣṇa.

arthavattva-1 अर्थवत्त्व-१ (YS III 44, 47), ability to developing kramas, the parināmas corresponding to which are the arthas3 of citta. Arthavattva is the matter of anvaya2 and anvaya2 the matter of both aindriya and bhautika forms of reality. These forms which the gunas take (YS III 44 and 47) obviously correspond to the gunaparvāni of YS II 19. If so, anvava² and arthavattva correspond to lingamatra and alinga respectively. Arthavattva is, thus, the potentiality of formation of kramas. It takes the form of anvava², which in its turn, takes the form of aindriya and bhautika viśesas.

arthavattva-2 अर्थवत्व-२ (VB III 44, 47) purposefulness. This is the fifth dimension of the elements. First four are sthūla (gross), svarūpa (the substantive), sūksma (the astral), and anvaya (homogeneity), respectively. The purpose of experience and emancipation is apparent in homogeneity of the qualities. The 'qualities' are to be found in tanmātrās, in the elements and in things evolved thereof, hence all these are full of purpose. Samyama on this gives rise to conquest over elements. In YS III 47, arthavattva refers to indriyas and samyama over it leading to indrivajaya.

arthārthī अর্থার্থা (BG VII 16), the seeker of wealth. Arthārthī is one of the four kinds of worshippers of God. Other three are, (1) seekers of knowledge (jijñāsu), (2) the distressed (ārta), and wisemen (jñānī).

aryamā अर्यमा (BY IX 80, 90), synonym of āditya. Since Āditya is the revered controller of the world, he is called aryamā.

alabdhabhūmikatva अलब्धभूमिकत्व (YS I 30), inability to rise to a higher stage, i.e. to acquire something worthwhile in the way of yoga⁴ or more worth-while than what has already been acquired. It is a plateau in the curve of yogic acquisition and one of Patañjali's antarāyas.

alambuṣā-1 अलम्बुषा-१ (SAU I (4) 9, 11; DU IV 8, 17,37; G 19, 21; YSU V 22; TSM 73). According to SAU, alambuṣā is said to run upwards and downwards from the pāyumūla (the anal region).

According to DU, it stretches from the kanda to the pāyu. The presiding deity of alambuṣā is here said to be varuṇa. According to G, alambuṣā goes to ānana आनन, which may mean the face or the mouth, presumably the latter, as the surface of the face is large and indefinite. According to YSU, alambuṣā goes from the nābhicakra to the right ear, and according to TSM it extends from the anus to the right ear. In all probability, alambuṣā and other nādīs² of this group are nerves.

alambuṣā-2 সলম্ব্রুষা-२ (VS II 23, 34, 40), one of the fourteen important nāḍīs situated below the middle of kanda and extending downwards on the left side upto the anus.

alasa अलस (BG XVIII 28), indolence, inertia. Doing nothing even when

something needs to be done. The quality of **tamas**.

alinga अलिंग (YS I 45, II 19), one of Patañjali's four gunaparvas (stages of differentiation in prakrti¹). Sānkhya synonyms of alinga are avyakta and pradhāna. From YS IV 34 it appears that there is pratiprasava (disintegration) of *Īśvarakṛṣṇa's* linga into alinga when its connection with a purusa¹ ceases. According to Vyāsa, nothing can be said about alinga-not even that it exists, or that it does not exist. Of course, it does not exist in the sense in which concrete objects exist. Of alinga we cannot even say that it is real, or that it is unreal. It may be some kind of māyā of which no description is possible. Alinga is described as the sāmyāvasthā साम्यावस्था (state of equilibrium) of the gunas1, in which state there is no distinction between sattva, rajas and tamas and there is no movement. In *Īśvarakṛṣṇa's* words there is no abhibhava (suppression), (over-riding), āśraya ianana (separation) or mithuna (union), which according to him are the gunavrttis. We get at the aviśesaguna-parva by metaphysically analysing the viśesagunaparva and at lingamātra by thus analysing the aviśesa one. But no further analysis of the gunaparvas is illuminating. If we try to analyse the three guṇas¹ in action (liṅgamātra), we get at something which cannot be described or grasped. It is so vague and

indefinite. Patañjali, however, includes alinga among the sūksmavisayas (subtle contents) of samāpatti. Hence only this much can be said about alinga, that it is a gunaparva and that it can be a sūksmavisaya1 of samāpatti. Thus, the Sānkhya theory escapes the charge of nihilism, though, according to the existentialist philosopher Heidegger, the so-called nihilism is not really nihilism, because all being which is changeable and fluid, mobile and mobilized, come from a "Being in repose". Nothingness, as absence of the state-of-being-present, "negates" without destroying. In this sense, alinga is a reality and according to the Sānkhya theory, everything comes from alinga (pradhana). This theory, however, is nothing like the biological theory of evolution. It is not a development in time. The various states are only the various levels of differentiation seen by metaphysical analysis.

aloluptva স্থলালুদ্ৰ (BG XVI 2), uncovetousness. Unaffectedness of the senses even when in contact with their objects. This is one of the twenty-six divine virtues (daivi-sampat).

alpabuddhi अल्पबुद्धि (BG XVI 9), undeveloped intellect, concerned only with the sense-enjoyments. This is one of the infernal or demonical qualities (cf. āsurī-sampat)

allāma अल्लाम (HPI8), name of a siddhayogī enumerated by Svātmārāma. Yogī Svātmārāma has paid his salutation to his predecessors by enumerating the names of the *siddhayogīs* in his text.

avakāśa अवकाश (TSB 7), one of the five stimuli which stimulates the five tanmātrās in the five sense organs. Avakāśa in ākāśa¹ stimulates the ear. The word literally means room, but in this context it seems to have been used by TSB for what we now call sound waves.

avakāśadāna अवकाशदान (VB III 42, IV 14), essence of the mahābhūta called ākāśa. Vijñānabhikṣu equates it with the essence of the śabdatanmātrā. According to Vyāsa, the ākāśa atoms are made up of the śabda²-tanmātrā. Literally, the word means affording room, and we can therefore roughly explain avakāśadāna in this context as being of the nature of empty space-a general receptacle of things. This seems to be Vyāsa's theory too.

avadhūta अवधूत (MBU V 9), an ascetic who has renounced all worldly connections. This stage is reached when a yogī constantly enjoys union with brahman as a result of long sustained samādhi. avadhūtayogī अवधूतयोगी (SSP VI 3), one who has attained the highest stage in yogasādhanā. Avadhūtayogī is one who, having abstracted one's mind from sensuous objects and absorbed it in the blissful self, has transcended the realm of the evolutes of prakṛti and the worldly distinction of past, present and future.

avadhya अवध्य (BG II 30), indestructible. Atman is indestructible.

avani अविन (GS V 41), ground (place). Tejo'vaniyutam तेजोऽविनयुतम्, therefore means: fire along with the fire place-not only the flame. Contemplation on this while performing pūraka, recaka and kumbhaka and simultaneously repeating the mantra³ bīja and agni is one of the three ways of samanunāḍīśuddhi³. For this purpose, the yogī may also meditate on vāyu or the image of the moon.

avayava अवयव (SK 10, VB IV 14), part. Linga¹ is described as sāvayava सावयव, i.e., it is not a single simple unity like pradhāna or a puruṣa, but a whole made up of parts. Each individual linga¹ is for a puruṣa¹ and each puruṣa² is equipped with a linga¹. The complexity and heterogeneity of lingas¹ distinguish them from puruṣas¹ as well as from pradhāna¹. Vyāsa calls tanmātrās to be the avayava of paramānus.

avasthā-1 अवस्था-१ (YS III 13), one of the three pariṇāmas¹, successful saṃyama on which enables a yogī to know all the past and the future pariṇāmas¹. Each pariṇāma¹ is an ever-changing krama taken to be a stable, more or less permanent object. Each thing that we know is really a succession of lakṣaṇas and each lakṣaṇa, in its turn, a succession of avasthās¹. Avasthās¹ themselves are also of the nature of unceasing change. (Cf. VB II 15) calaṃ hi guṇavṛttam चलं हि गुणवृत्तम्.

avasthā-2 अवस्था-२ (TSM 13; YCU 73; VU IV (1) 6), a state of human existence. Jāgrat, svapna, susuptī and turiya are said to be the four avasthās². These are not considered to be the avasthas of siva but of the kośas, which are vikāras (welldifferentiated aspects), and although śiva appears as jīva (yathā jīvastathā sivah यथा जीवस्तथा शिवः), siva is in essence nirvikāra (not subject to change). The kośas are the vikāras of jīva. Thus, it is śiva as jīva who lives in the four avasthās², not śiva as such. According to YCU, one aspect of human existence is the four purusas³, which every man is, each of these purusas³ being the lord (enjoyer of one of the four avasthas2) of human existence

These puruṣas³ are the forms assumed by brahman and the avasthās² are the forms which the parāśakti (creative energy) of brahman takes. Brahman is the lord of prakṛtī and the various forms of brahman are the lords of the various aspects of prakṛti. This is the Vedāntic theory of the four puruṣas³. In this context, the word puruṣas³ is not used in the sense in which it is used by Sāṅkhya philosophers, including Patañjali.

avasthā-3 স্ত্ৰন্থা-২ (HP IV 38), bodily attitude. Avasthā³ of śāmbhavi and khecari mudrās are said to be different because in the former, eyes are halfopened and eye-brows a little raised,

while in the latter, tongue is introduced into the aperture in the roof of the mouth.

avasthā-4 अवस्था-४ (HP IV 69), stages of progress in yoga⁴. Arambha, ghaṭa, paricaya and niṣpatti are here said to be the four avasthās⁴.

avasthā-5 अवस्था-५ (MBU II (4) 1), stages of mind which are enumerated such as - jāgrat, svapna, suṣupti, turīya and turīyātīta.

avasthātraya अवस्थात्रय (NBU 54), jāgrat, svapna and suṣuptī. The yogī at the highest stage of development never dwells in any of these states. His proper state is turīya.

avasthāviśeṣa अवस्थाविशेष (NGB I 2), synonym for cittabhūmis. Kṣipta, vikṣipta, mūḍha, ekāgra and niruddha are termed avasthāviśeṣas of citta.

avikṛti अविकृति (SK 3), unstructured (= undifferentiated = not formed in anyway whatsoever). Pradhāna (= mūlaprakṛti = Patañjali's aliṅga) is avikṛti. All other things are differentiated forms of that. Avikṛti is not a differentiation in any thing, still more undifferentiated. It is the limit of homogeneity.

avighāta अविधात (SK 45), success in every enterprise. This siddhi² is acquired by virtue of aiśvarya.

avidyā अविद्या (YS II 4, 5, 24; SS I 61), the mother **kleśa** which consists in taking: (1) the ever changing phenomena to be permanent objects; (2) things of the world, which are out and out soiled, to be pure; (3) ever painful existence to be pleasurable; and (4) something quite the opposite of self to be the self. Avidyā is inherent in every citta except that of iśvara. Asmitā¹, rāga, dveṣa and abhiniveśa spring from avidyā, which is responsible for the continuance of samyoga.

From the psychological point of view the chief importance of avidya lies in its being the tendency to perceive objects as real and abiding. Whenever a sense organ is stimulated, we perceive a real lasting object whatever the metaphysical status of the object may be. The kleśa avidyā in us is responsible for this. Samyoga implies avidyā (YS II 24). Since avidya inheres in every citta there can be no samyoga without a citta. Avidyā too is beginningless like samyoga and is destroyed only when the citta in which it resides is destroyed. That it may be laid completely to sleep even before pratiprasava of the citta, is another matter.

According to SS also, the world is seen on account of avidyā being active in the mind. In other words, the world of pariṇāmas¹ in each citta² is there because of avidyā in the citta¹-not the world of kramas, which is independent of any citta¹. This would be in Patañjali's language, what SS says in its own way. According to Patañjali, every citta¹ is a pariṇāma¹ in people's mind like so many other pariṇāmas.

aviparyaya अविषयं (SK 64), freedom from wrong knowledge. Viveka, which consists in clearly distinguishing between prakṛti¹ and puruṣa¹, is considered by Īśvarakṛṣṇa to be pure (viśuddha) because it is the knowledge of truth and truth alone.

aviplavā अविष्तवा (YS, VB, VM, II 26), uninterrupted (flow of knowledge), continuous (awareness). When false knowledge has its seed burnt up and is made incapable of fruition, then the uninterrupted discriminative knowledge is established. This is essential for the absolute removal of the pain arising out of false knowledge.

avirati अविरत्ति (YS I 30), one of the nine antarāyas. It is a lapse in vairāgya, which is one of the two disciplines prescribed by *Patañjali* for cittavṛtti-nirodha. Avirati is attachment, which is the opposite of vairāgya and hence an antarāya.

avivekī अविवेकी (SK 11, 14), one allpervading substance which has no separable members or ingredients. Vyakta as well as pradhāna¹, is said to be such, none of them has members, each enjoying a separate and independent existence. Neither vyakta nor pradhāna¹ can be split into sattva, rajas and tamas, though they are guṇātmaka (of the nature of guṇas). Puruṣa¹, on the other hand, do not mix with one another to form one substance. Each of them has a separate existence independent of the others.

aviśuddhi अविशृद्धि (SK 2) impurity. The means prescribed by the Vedas for warding off pain of all kinds are also impure (aviśuddha) in so far as they aim at the satisfaction of ambitions which are aklista. The Kārikās do not throw any light on the meaning of the words śuddhi, viśuddhi, aśuddhi and aviśuddhi; but Patañjali has clearly used the word śuddhi for purity, which results from the practice of the yogāngas, particularly tapas. Obviously, by śuddhi he means practically complete inactivity of rajas and tamas due to superabundance of sattva. May be *Īśvarakṛṣṇa* had in his mind performance of an animal sacrifices for attaining svarga स्वर्ग (paradise) and thus gaining freedom from pain.

aviśesa-1 अविशेष-१ (YS II 19; SK 38), one of Patañjali's four gunaparvas. From YS III 44 and 47, it appears that **sthūla**, svarūpa and sūksma are the bhautika viśeṣāviśeṣaguṇaparvas and grahana svarūpa and asmitā² the aindriya ones. Which of them are viśesa and which aviśesa according to Patañjali, is not quite clear. It, however, appears that viśesa and aviśesa are relative terms and that bhautika and aindriya svarūpa, i.e. the five mahābhūtas and the eleven indrivas1 of which the cittas are made up, can be looked at as viśesas as compared to tanmātrā and asmitā² respectively (VB II 19). But they are aviśesas as compared to sthula and grahana respectively. No wonder that

the five mahābhūtas are generally known as viśeṣas (SK 38); though according to SK they are not śānta, ghora and mūḍha viśeṣas. Thus, while the mahābhūtas and the indriyas¹ can be called aviśeṣas¹ only when compared to the material objects and cittavṛttis respectively; asmitā² and tanmātrās are aviśeṣa¹ proper. By sūkṣma, Patañjali in III 44 probably means the tanmātrās. Īśvarakṛṣṇa also considers tanmātrās to be aviśeṣa.

aviśesa-2 अविशेष-२ (SK 34), qualities of objects known through sense organs, e.g. redness, hardness, fragrance. It appears that, according to \bar{I} svarakrsna, the buddhindriyas1 are the organs of perception as well as sensation. By using them we perceive concrete objects like paper, pen, book and also sense their qualities. The former, *Īśvara*kṛṣṇa calls viśeṣa viṣayas and the latter aviśesa². Sensing is the function of buddhi indriyas1. But sense (sense data) are never experienced as such. We always perceive objects. Manas1 working as an indriva¹ immediately raises a perception whenever a sense organ is stimulated. Our knowledge of the sensa (sense data) is only an abstraction which is the function of manas¹ as an indriya¹ (VB III 47).

avyakta-1 अव्यक्त-१ (SK 2, 10, 14, 16, 58; TSB 3), literally inarticulate, unnoticeable. It is one of the three realities, a deep insight into which is

said to be the one means of getting rid of pain which is superior to all other means. **Avyakta** is described as the one everlasting, all-pervading, self-supporting, formless independent first cause which is one. Though it can neither be perceived nor introspected, its reality is proved by inference from the following: (1) every thing has a material cause in which its essence must be present; (2) the differentiations (effect) are limited; (3) there is unity of nature; and (4) effects emerge from and disappear in their material cause.

Avyakta operates through the three guṇas¹ mixing with one another and assuming different shapes in accordance with the degree of preponderance of each guṇa¹. As if to satisfy an inner urge of its own, avyakta provides all the vyakta means required by any puruṣa² for the attainment of kaivalya by its puruṣa¹ member.

According to TSB, it is the first form which **brahman** assumes. **Avyakta**¹ in its turn assumes the form of **mahat**, and so on. This is how creation proceeds according to this *Upaniṣad*. *Īśvara-kṛṣṇa* does not believe that **avyakta** comes out of **brahman**. According to him, it exists separately in its own right, but is perfectly indeterminate. cf. **aliṅga**.

avyakta-2 अव्यक्त-२ (MBU II (1) 2), not perceptible to all and sundry, but seen only by the *yogis* at a very advanced stage of **yoga**¹.

avyaktā अव्यक्ता (VS II 26), synonym for susumnā.

avyaya अव्यय (TBU I 2, 8), imperishable. It is one of the words used to refer to the indescribable **brahman**.

avyāpi अव्यापि (SK 10), not omnipresent.

Vyakta (the manifested) is described as avyāpi as there can be avyakta² even when there is no vyakta.

Avyakta² alone can be said to be vyāpi व्यापि (omnipresent) in the sense that nothing guṇātmaka (of the nature of guṇa) can exist outside avyakta².

aśakti अशक्ति (SK 46-9), of the fifty components of the pratyayasarga twenty-eight are aśaktis. They are the eleven indriyavadha इन्द्रियवध (destruction of the power of the indrivas) and the seventeen buddhivadha बद्धिवध (destruction of the power of intellect). These are not physical deficiencies or deformities. They are positively mental. Neither an indriya1 nor buddhi1 is an anatomical structure or a physiological organ. They are abilities of men and animals to perform different functions. Inability to achieve a siddhi³ and the weakness of being easily contented, either for lack of scientific knowledge or faith, are also asaktis.

aśuklākṛṣṇa সম্বলাকৃতা (YS, VB, VM, VBh IV 7), neither white nor black (variety of karma). Karma has been conceived to be quadripostile: white, black, white and black and neither-white-nor-black. The last variety belongs to yogins who are not affected

by white **karmas** since they have renounced the fruition even if good (*phalasannyāsāt*) and also not afflicted with black **karma** since they will have nought of it (*anupādānāt*).

aśuci अश्चि (BG XVIII 27), impure (inside and outside), or devoid of (internal or external) purity. The quality of rajas. aśuddhi-1 अशृद्धि-१ (ABU I), one of the two states of manas1. An asuddha अशुद्ध (impure) manas¹ is that which is attached to objects of desire. The śuddha manas is perfectly unattached. aśuddhi-2 अशुद्धि-२ (YS II 28, 43), impurity. In YS II 28, impurity refers to every activity prompted by the kleśas¹. It is only when the kleśas1 are gradually laid to sleep and thus made inactive by the practice of \mathbf{voga}^1 that a $yog\bar{i}$ proceeds in the direction of realising the truth. The impurity to which Patañjali refers in YS II 43 is a forceful action of the kleśas¹. In YS II 2, tapas, svādhyāya

weakening the **kleśas**¹. In the context of realization of truth it means laying them completely to sleep (VB II 27).

and iśvarapranidhana are said to be

the means of weakening the kleśas¹ and

creating an urge for attaining

samādhi¹. Removing of impurity (YS

II 43) in this context therefore means

aśubha अशुभ (BG IV 16, IX 1), evil.

Synonym for world, because it is full of evil. Śubha is the highest abode of brahman.

aśūnya अशून्य (TBU I 10), literally void-

less. Brahman is sometimes called aśūnya because it is a veritable reality and not a void in this sense. All the same it is a void-void as nothing-as compared to worldly existence. It does not exist as things of the world do. In this sense, it is śūnya and the Vedas could say about this Reality nothing except "it is not this, it is not this". We cannot point to Him as we point to or explain worldly things. Besides, there is nothing beyond brahman. All that is not brahman is unreal. Here we cannot call brahman śūnya. In this sense He is **śūnya**. This is the monistic Vedantic view.

aśvattha अञ्चल्य (BG XV 1), the holy fig tree. (A holy tree according to Indian mythology). The world has been compared with a fig-tree. Literally aśvattha means that which will not last till tomorrow, i.e., transitory. The simile suggests the transitoriness of the world because it undergoes change every moment.

aśvi সফিব (TSB 8), one of the twelve gods who resides in one of the twelve nāḍis in the form of the twelve prāṇas¹.

aśvini अश्विनी (GS I 47, III 3, 64-5), contracting and relaxing the anal muscles alternately and thus closing and opening the mouth of the anus again and again. This is believed to cure the diseases of the anal region, to give it strength and ultimately to ward off premature death and to awaken the kuṇḍalini.

aṣṭakumbhaka অন্তক্তৃম্পক (HP II 44), Svātmārāma considers eight varieties of kumbhakas. They are-sūryabhedana, ujjāyī, sītkārī, śītalī, bhastrikā, bhrāmarī, mūrcchā and plāvinī.

aṣṭadalapadma अष्टलपदा (DBU 93-1), the dhyānasthāna in the hṛdaya which is generally imagined as a lotus of eight petals. The jīvātmā (transmigrating self) is supposed to reside in this as in the centre of a circle. The jīvātmā residing here has complete abhimāna (= ahaṅkāra) in him and thinks that he is the doer, the enjoyer and the sufferer.

aṣṭaprakṛṭi अष्टप्रकृति (VS II 16; BG VII 4), eight primordial causal forms of prakṛṭi. Synonym for kuṇḍalinī. Since there are eight coils in kuṇḍalinī, it is called aṣṭaprakṛṭi. According to Gīṭā, aṣṭaprakṛṭi consists of-(1) prakṛṭi (root-cause), (2) mahaṭ (intellect), (3) ahaṅkāra (I-amness), and (4) the five tanmāṭrās, which are, śabda (sound), sparśa (touch), rūpa (form), rasa (taste), and gandha (smell). Each coil symbolically represents eight-fold prakṛṭi.

aṣṭaiśvarya अष्टेश्वर्य (HP III 7), eight super-normal powers. These are,aṇimā, mahimā, garimā, laghimā, prāpti, prākāmya, īśitva and vaśitva. The practice of mudrās bestows these powers.

asakta असक्त (SK 40), having no limitations on account of being so subtle

that it can reach everywhere. The hard bone of the skull is no obstruction to linga¹, which can pass out of the body, even if all the openings are closed, and can adopt a human or an animal body as determined by vāsanās lurking in it.

asat असन् (SK 9), that which does not exist in any manner whatsoever. The theory is that which does not exist in anyway whatsoever cannot be brought about, i.e., the effect must in someway already exist in the cause; otherwise it would never be brought about. According to this theory, the effect potentially exists in its material cause. When it is brought about, it becomes actual. Hence, everything potentially exists in pradhāna (= avyakta mūlaprakṛti). Nothing that is brought about is absolutely new. This is the Sāṅkhya satkāryavāda.

asamprajñāta असम्प्रज्ञात (VB I 2, 11, 18,20), a state which is neither a vṛtti¹, nor a pravṛtti, nor even samāpatti and in which the citta¹ is reduced to a mere saṃskāra. This condition is natural to prakṛtilayas; but in others it is the endresult of their śraddhā, vīrya, smṛti and samādhi¹.

The word **asamprajñāta** is not used by *Patañjali*, nor is it the desired goal. *Patañjali's* **anya** अन्य (other) **yoga** (YS I 18) is not the desired goal of **yoga** according to him. It is a blind allay from which the *yogī* has to return sooner or later (cf. VM I 18). It is true that there

being no activity of **citta**¹ in that state, there is no **duḥkha** so long as that state lasts; but it is not the way to **kaivalya** so far as *Patañjali's* theory goes.

asampramoṣa असम्प्रमोष (YS I 11), not forgetting, but as used by *Patañjali* in the description of **smṛti**, which is one of five **cittavṛttis**, it obviously means recall, recollection of previously experienced material. "I did not forget to bring my ticket", e.g., means: " I remembered that it was to be brought". Ordinarily, not forgetting is not a **vṛtti** but only a structural component of the mind-a disposition. But in this context, **asampramoṣa** is remembering and is a **cittavṛtti**¹.

asaṃsakti असंसक्ति (VU iv(1) 3, iv(2) 2,7), detachment. Second of the seven stages of attaining knowledge. The other six being respectively,- śubhecchā, vicāraṇā, tanumānasī, sattvāpatti, padārthabhāvanā and turīyā. Wherein passionate attachment to objects of sensual enjoyments is attenuated as a result of virtuous desires, is called asaṃsakti.

asaṃsarga असंसर्ग (YS II 40), shunning of contact with others. This is a part of śauca. This sūtra सूत्र does not endorse the concept of untouchability. It only enjoins the cultivation of the attitude of complete detachment towards one's own, as well as others bodies. They are under no circumstance to be used as sources of pleasure.

asāmānya असामान्य (SK 29), of each its

own. Sensation and perception are the functions of **buddhīndriyas**, impelling action that of **karmendriyas**, **saṅkalpa** that of **manas**, self-consciousness that of **ahaṅkāra**¹ and deliberation that of **buddhi**. Each one of these **karaṇa**³ can perform its own function separately. Such a function is called **asāmānyavṛtti** by SK. But they can also perform a function jointly. This is the *sāmānyakaraṇavṛtti* = *prāṇādivāyvaḥ pañca* (Cf. VB III 39), the various autonomic reflexes.

astatandri अस्ततन्द्री (TBU I 5), wide awake. The **brahman** is not to be known in the state of drowsiness, or sleep, but while one is wide awake.

asteva-1 अस्तेय-१ (SAUI(1)4, 7; DUI6, 11-12; VU V 12; TSM 32; YSH I 22; YS II 30, 37), not stealing either by doing or saying anything or thinking this way (i.e., not stealing by thought, word or deed). This means that a mere wish that what belongs to another person should have been mine is also steya स्तेय and is prohibited to a yogi. Asteya is one of the ten yamas according to SAU and other texts. According to DU, asteya consists in complete indifference towards the property belonging to another, whether it is a straw, money, a jewel, gold, or a pearl. Patañjali mentions asteya as one of the five yamas. For Patañjali asteya appears to be unadulterated honesty, including straightforwardness. Since it covers all forms of honesty in thought, word and deed, no wonder that, if one completely masters **asteya**, one perfectly becomes virtuous. He has all the virtues in him. This seems to be the meaning of **sarvaratnopasthānam**. According to YSH, expecting anything more than one's legitimate claim is also contrary to the sentiment of **asteya**.

asteya-2 अस्तेय-२ (VS I 42), non-stealing, one of the ten yamas. Having no greed for any materialistic things by action, thought, or speech is said to be asteya. asphuraṇa अस्फ्ररण (TSM 121, 124), cessation of throbbing. The cessation of arterial pulsation in places where it is ordinarily felt, is supposed to be a sign for the yogī of the approach of his death. If throbbing ceases at the arm pits and the lateral part of the genitals, the yogī knows that he would live for only one month more.

asmitā-1 अस्पिता-१ (YS II 6), one of the five kleśas (in-born psychological tendencies). It is the very core of avidyā, as it is an inability to distinguish between puruṣa¹ and citta¹, the former being eternal, the latter comparatively transient, although it does not disappear with the death of the bodies it takes. Every citta¹, however does cease to exist when its last body dies.

asmitā-2 अस्मिता-२ (YS III 47, IV 4), the aindriya aviśeṣa guṇaparva in which the eleven indriyas¹ are discerned. As explained by VB II 19, it is the aviśeṣa¹ guṇaparva in which the indriyas¹

develop. The individual **cittas**¹ are, made up of the **indriyas**¹, **Asmitā**² is thus the matter which takes the innumerable forms called **cittas**¹. Hence *Patañjali* believes that the **cittas**¹ come from *asmitāmātra*, i.e., the one *anidriya* (of the nature of **indriya**) stuff in which no differentiations are seen. If we metaphysically analyse a **citta**¹ we see that it is made up of **indriyas**¹, which are nothing but complexities in **asmitā**². If we look deeper, ignoring the complexities, we get to *asmitāmātra*.

asmitā-3 अस्मिता-३ (YS I 17), Since Patañjali has clearly said that savitarkā, nirvitarkā, savicārā and nirvicārā are the sabīja samādhi1 (samāpattis) and no others, the samādhi¹ which has for its prajñā, ānanda³ and asmitā³ must be nirbīja samādhi. The samādhi¹ prajñā of this kind of samādhi1 seems to be some kind of higher consciousness and the asmitā³ rūpānugama रूपान्गम of citta³ to be the cit, of citisakti corresponding to cit of cidananda (consciousnessbliss) of monistic-Vedantists. The state of Patañiali's nirbiia samādhi1 seems to be the Vedantic saccidananda state, often described as the nijāvasthā निजावस्था (state of pure consciousness of ātmā). What exactly this state is, only the person who has attained nirbija samādhi¹, really knows. This state lasts for a longer or shorter time-only so long as the $yog\bar{i}$ is in that state of **samādhi**¹. It is a state of samāpatti like the other four states of samāpatti which Patañjali calls sabīja samādhi¹. It is positively akin to kaivalya, though it is not asamprajñāta, which resembles kaivalya only in the absence of duḥkha in that state. The phrase asmitā rūpānugama रूपानुगम (assuming the form of) distinguishes nirbīja samādhi¹ from nidrā also. This state is the opposite of nidrā, of which the ālambana is abhāva, as well as of the state in which there is no samādhiprajñā whatsoever, generally supposed to be the sate of asamprajñāta-samādhi.

asmitā-4 अस्मिता-४ (VBh I 8), sense of 'svatva', i.e. ownership is asmitā. Idea of self in not-self. Considering aṇimā etc. the eight siddhis as self which are not-self.

asvara अस्वर (ABU 7), pure brahman as opposed to svara brahman (= aum^1). While yoga is practised with the aid of aum (svara) the asvara is to be experienced. From this it appears that the Upanisatkāra does not consider realization of the asvara brahman to be a practice of voga¹. It is an experience which comes of its own accord at the end-result of the practice of voga1; and being an experience which is real, the asvara anubhava (experience) cannot be taken to be the absence of everything (a non-existent). It is a veritable reality. ahankāra-1 अहंकार-१ (VB I 45, III 47; SK 22, 25; TSB 3), a stage of differentiation in the gunas1 introduced by

TSB, SK and VB between *Patañjali's* aviśeṣa and liṅgamātra. According to SK and TSB, from prakṛti (avyakta) ensues mahat and from that ahaṅkāra, which in its turn develops into the five tanmātrās. According to SK, the eleven indriyas¹ also are a differentiation in ahaṅkāra.

ahaṅkāra-2 अहंकार-२ (SS III 2, 37; VB II 15; GS I 4; TSM 7), self-consciousness, pride-a typical rāga. GS considers it to be the greatest enemy of man. Yoga⁴ is in this text said to be man's greatest strength. Ahaṅkāra is an obstacle in the path of yoga⁴. According to SS, ahaṅkāra resides in prāṇa¹ (= jīva).

ahankāra-3 अहंकार-३ (SK 24; TSB 5, 6, 9), according to TSB, one of the five amśas1 of ākāśa1. This ahankāra is considered in these texts to be an antahkarana and in TSB is said to be one of the kāryas of ākāśa and visaya4 of antahkarana. According to this Upanisad, the function of ahankāra² is implied in the function of **buddhi**. The entire creation is here said to be from the mahābhūtas. This text does not speak of asmita2 of the gunas1 and while for Patañjali sattva2 predominates in the aindriva (pertaining to indriya) creation. According to this text, ākāśa1 predominates in it. Ahankara is one of the many things which are impediments in the path of yoga4 and should be avoided by every aspirant. The function of ahankara is self-consciousness, meaning: 'the idea of oneself as different from other selves', not pride, though its function is called **abhimāna**, generally understood as pride.

Īśvarakṛṣṇa does not consider **ahaṅkāra** to be **rāga**, which according to him, is one of the **bhāvas²**. He also describes it as **abhimāna**.

ahaṅkāra-4 अहंकार-४ (BG XVI 18; SSP I 46), egotism, the source of all perversities (doṣas). It consists in estimating oneself very highly for qualities which one really possesses and also for those qualities which one falsely attributes to oneself. SSP explains ahaṅkāra as having five characteristics: (1) abhimāna, the pride for those qualities which are not possessed, (2) madīya, sense of mine, (3) mama-sukham, sense of 'my pleasure', (4) mama-duḥkham, sense of 'my pain', and (5) mamaitam, sense of 'this is mine'.

ahaṅkṛti अहंकृति (YTU 10; YSU I 8), the urge which rises like a wave in water in the paramātmā (the one Supreme Being). It is called sphūrti. It makes a jīva (living being) of the Supreme Reality.

ahita अहित (HP I 60), harmful, unwholesome (food). That food is unwholesome which is heated over again, dry, excessively salty or sour, bad food and food with excess of vegetables.

ahiṃsā-1 अहिंसा-१ (YS II 30, 35; VB II 30; DU I 6-8; SAU I (1) 4-5; YTU 29; YSH I 19), one of the yamas¹, It

consists in avoiding hiṃsā in action, speech and mind. According to some followers of the *Vedānta* philosophy, the belief that ātman is all-pervading, that it cannot be pierced or cut and that it cannot be grasped, is the best form of ahiṃsā. But ahiṃsā, as others understand it, is prescribed as a yama¹ even by the Vedāntists. According to YSH, the following five forms of hiṃsā are caused by krodha (anger) or lobha (greed).

- 1. tying of men and animals;
- 2. causing a cut on their skin;
- 3. overloading them;
- 4. striking them; and
- 5. depriving them of food, etc. (cf. himsā).

YSH emphasises the importance of mental ahimsā. According to VB, satya, asteya, brahmacarya and aparigraha complete the ahimsā.

ahiṃṣā-2 अहंसा-२ (VS I 39, 40), non-injury, one of the ten yamas. Non-injury to all being at all times under all circumstances by deed, thought or speech is ahiṃṣā. This concept of ahiṃṣā conforms well with the concept of ahiṃṣā given by Vyāsa in his commentary on YS II 30. Vasiṣṭha further adds; if an action prescribed by the scriptures causes no affliction to any living being can be called ahiṃṣā but an act like sorcery, even if it is prescribed by the scriptures is liable to be considered hiṃṣā (violence).

ā - आ

ākāra-1 आकार-१ (VB I 11), aspect.

Cognition of object has two aspects the content of cognition and the process
of cognition and it generates memory
of both. Hence we say: "I remember to
have seen that object before".

ākāra-2 आकार-२ (VB II 32), facial expression. In reply to a question remaining silent but showing the inner feeling by facial expression are also language.

ākāra-3 आकार-३ (G 87, 92; VB IV 10), form, shape. G considers ātmā¹ to be shapeless. He describes it as gaganā-kāra गगनाकार in G 87. Laxminārāyaṇa comments that, for the purpose of dhyāna, ātmā² should be taken to be sky-blue. This, however, does not seem to be the meaning of gaganākāra. Gaganākāra may be no ākāra. Some thinkers believe that citta¹ assumes the shape of the body which it takes.

ākāramauna आकारमोन (VM, VBh II 32), a form of austerity (tapas) which consists in observing silence. This has been distinguished from kāsthamauna.

ākārāpatti आকাষোদি (YS IV 22), saṃyoga in an indescribable relation between puruṣa¹ and prakṛti¹, in which the former somehow comes in contact with the latter. Hence while speaking of buddhi, which the puruṣa knows when he is in saṃyoga with it, Patañjali uses the word ākārāpatti. Speaking of vṛtti-less citta¹ (i.e. citta¹ svarūpa), he uses the word avasthānam (YS I 4); while speaking

of citttavṛttis¹, the word sārupyam (YS I 4) is used by him. The word saṃyoga is used when Patañjali speaks of dṛśya¹ (YS II 17). It appears that puruṣa¹ has saṃyoga with citta¹, whether the latter exists in the form of cittavṛttis or is vṛtti-less, i.e. in its svarūpa.

ākāśa-1 आकाश-१ (VB I 45, II 19, III 44; ABU 13; ATU 7, 9; MBU I (2) 13; G 73; TSB 5, 6, 9; ANU 31; YTU 84, 98, 99), one of the five mahābhūtas, called the viśesas of the tanmātrās which are their avises as. $\overline{A}k\overline{a}sa^1$ is dimensionless empty space. Hence its avakāśadānatva (yielding place characteristics) and sarvatogati सर्वतोगति (all-pervadingness). Infinitude and indivisibility are also mentioned by VB as its properties. The various sounds which we hear are said to be the forms which ākāśa¹ takes. They cannot be touched, seen, tasted or smelt, but only can be heard (VB III 41). Akāśa however, is not empty space. It is a form of reality. The ancient Indian theory is that all sounds are in akasa. The śabdatanmātrā in ākāśa is therefore said to stimulate the *jaiva* tanmātrā in the ear.

ABU compares $j\bar{i}va^1$ to $\bar{a}k\bar{a}\dot{s}a$ enclosed by a pitcher. When the pitcher is broken the $\bar{a}k\bar{a}\dot{s}a$ is not broken. $\bar{A}k\bar{a}\dot{s}a$ remains just $\bar{a}k\bar{a}\dot{s}a$. It is all one, though it assumes different forms in different containers. The truth is that there are not many $\bar{a}k\bar{a}\dot{s}as$ of different

forms and shapes. Similarly, the Ultimate Supreme Reality is one and only one. The many forms in which it appears are not of the nature of ultimate reality. Their reality is only apparent.

Ākāśa is one of the five tattvas³ on which dhāraṇā is prescribed. Its seat in the body is supposed by YTU to extend from the middle of the eyebrows to the top of the head.

Gorakṣa places ākāśa in the brahmarandhra. He considers it to be bright and compares it to pure water. Brahmarandhra is said to be decorated with the bījamantra 'ha' and the presiding deity of ākāśa śańkara (śiva) is supposed to reside there.

According to TSB, the ākāśa element in living beings is responsible for the fivefold antaḥkaraṇa (antaḥkaraṇa, manas¹, buddhi¹, citta² and ahaṅ-kāra²). Since ākāśa is inside the body as well as outside, it can be part of the bahirlakṣya as well as of the madhyalakṣya. In the latter case it is called bāhyābhyantaravyoma.

ākāśa-2 সাকাগ-২ (ANU 11), atmosphere. Recaka, according to this *Upaniṣad*, consists in throwing out air into the atmosphere and thus bringing about a state of emptiness, obviously in the lungs.

ākāśa-3 সাকাগ-২ (YTU 99, 102), the topmost part of head inside (i.e. the top of the brain). In ākāśadhāraṇā, as well as in dhyāna, anila¹ (vāyu¹) is to be taken to this spot and maintained there for a definite length of time.

ākāśa-4 আনাগ-৮ (MBU IV 1-4), one of the five ākāśas of the vyomapañcaka. The names of the five ākāśas in the IVth Brāhmaṇa of this Upaniṣad do not tally with those mentioned in the Brāhmaṇa I. The latter list tallies with the one given in Advayatārakopaniṣad. ākāśa-5 আনাগ-५ (SSP I 42), one of the five mahābhūtas. According to SSP, rāga (attachment), dveṣa (aversion), bhaya (fear), lajjā (bashfulness) and moha (infatuation) found in human beings are due to ākāśamahābhūta.

ākāśacakra আকায়ান্তর (SSP II 9), the last cakra in the series of nine cakras enumerated by SSP. A spot to be meditated upon. This cakra has sixteen petals and is known as pūrṇagiripiṭha located in the upper part of the brahmarandhra.

ākāśa (sthāna) आकाश (स्थान) (VS IV 4, 7, 9, 14), region of ether in the body. Etherial spot. From the toes (angustha) to the top of the head (mūrdhāntam) the human body has been divided into five regions for the practice of dhāranās. From the middle of the eyebrows to the top of the head is said to be the region of ākāśa. The technique of this dharana lies in imposing the prāṇa at the ākāśa region together with its letter 'ha' ह and unmanifested deity, and retaining it for five ghatikas (two hours). This facilitates the attainment of samādhi and thereby liberation.

ākāśadhāraṇā आकाशधारणा = nabho-dhāraṇā नभोधारणा (YTU 102; GS III 63; G 73), dhāraṇā on ākāśa¹. It consists in taking the vāyu² to ākāśa³ and contemplating the image of Śaṅkara. By practising this dhāraṇā, the yogī is said soon to acquire the extraordinary power to move about in space quite unsupported. This is one of the five well-known mahābhūta-dhāranās.

ākūta আকুন (SK 31), prompting. Some vṛttis¹ of the karaṇas² may be promoted by other karaṇa vṛttis¹ and one karaṇavṛtti may in this way bring about other karaṇavṛttis¹. This is parasparākūta परस्पराकृत.

But the karaṇas², according to SK, have no aims of their own to fulfill. The only end towards which all their activities are directed by prakṛti¹ is, according to Īśvarakṛṣṇa, bhoga and apavarga of puruṣa².

āgama-1 आगम- (ANU 16), the *Vedas* (śruti). Ūhana ক্ৰন্থন (deliberation) which does not contradict what is laid down in the *Vedas* is said to be **tarka**.

āgama-2 आगम-२ (YS I 7; SK 6), any idea entertained on the strength of testimony. It is one of the three pramāṇas. If pramāṇa is correct knowledge and viparyaya incorrect knowledge, then obviously pratyakṣa, anumāna and āgama can all be either pramāṇa or viparyaya; because error is possible in all the three of them. Patañjali has said nothing to the contrary. Vyāsa's con-

tention, however, is that the testimony of a $m\bar{u}lavakt\bar{a}$ দুলেবলা is infallible seems to be wrong if $m\bar{u}lavakt\bar{a}$ is a person who has a first-hand knowledge of what he says, because it has been found that even the testimony of an eyewitness is sometimes unreliable.

In YS I 49, *Patañjali* uses the word *śruta* স্থান for **āgama**. *Īśvarakṛṣṇa's* word is āptāgama आप्तागम (knowledge gained from a reliable person).

The other two **pramāṇas**, according to *Patañjali*, are **pratyakṣa** and **anumāna**; and **dṛṣṭa** and **anumāna**, according to *Īśvarakṛṣṇa*, who believes that all the other **pramāṇas** mentioned by others fall under one or the other of these three. For a knowledge of that which can neither be directly experienced nor inferred one has to depend on **āgama** alone.

āgamajāla आगमजाल (HP IV 40), conflicting views found in āgamas, i.e. the *Vedas*. Those who are misguided by the views expressed in the *Vedas* etc., never become capable of knowing the **unmanīmudrā** which liberates.

āgneyī आग्नेयी (NBU 6), one of the four mātrās¹ of oṃkāra. It is the first mātrā¹ i.e. A.

ācārya आचार्य (ATU 13-18), guru². Competent teacher of yoga⁴. Without an ācārya the sahasrārāntarlakṣya cannot be seen. The ācārya must be wellversed in the Vedas; he should be a devotee of God viṣṇu, unenvious, conversant with yoga⁴, engaged in yoga⁴

and filled with **yoga**⁴. The **ācārya** in his turn, must be devoted to his own **guru**² and should have realised the true self.

Literally **guru**² means dispeller of darkness. One's **guru**² is said to be **brahman** Himself. **Guru**² is the end all and be all, the highest wisdom and the last resort for the disciple. There is nothing for him above his **guru**², which is the richest treasure for him. **Guru**² is certainly higher than the disciple, because he is the teacher of the disciple, though a disciple may even acquire more than what his **guru**² did.

ājñā आज्ञा = ājñācakra आज्ञाचक्र (YSU I 175, V 11; YKU III 10-11), one of the six cakras². It has only two spokes, it is situated inside between the eyebrows and is described as being like the orb of the moon, as well as being nādarūpa. YKU identifies it with mastaka ম্বকে (forehead) and says nothing more about it.

G places **parameśvara** (G 86) between the eyebrows and describes this deity as resplendent like a pearl.

ātmakhyāti आत्मख्याति (YS II 5), identifying oneself with non-self. One of the aspects of avidyā, according to *Patañjali*, is the belief that our body, and many other things for that matter, are parts of ourselves. This is anātmasu अनात्मस् ātmakhyāti.

ātmatā आत्मता (TBU I 34), selfhood. **Pratyāhāra**, according to this text, is that state of a $yog\overline{i}$ in which he does not see the objects as anything different from **brahman**, the Supreme Self. He sees **brahman** in himself as well as in everything else. This is a blissful state for him.

ātmatīrtha आत्मतीर्थ (DU IV 50, 53; BY VII 167), sacred place in one's own body. It is suggested that instead of visiting sacred places with a view to attain liberation, one should meditate on the sacred places on one's own body. According to DU, śrīparvata is at the crest (i.e., śirasthāna), kedāra in the forehead (lalāṭaka), vārāṇasī at the junction of the brows and the nose (bhruvorghrānasyamadhyame),

Kurukṣetra in the region of the breasts (kucasthāna), prayāga in the middle of the heart (hṛnmadhya) and kamalālaya in mūlādhāra. One who resorts to the external tīrthas goes for pieces of glass abandoning the precious gems in the hand.

ātmadarśana आत्मदर्शन (YS II 41), vivekakhyāti.

ātmadhyāna आत्मध्यान (TBU I 16), the state of not having any object before consciousness other than one's true self which is the Supreme Self. For this Upaniṣad, as for Gorakṣa (G 76), dhyāna is always ātmadhyāna-dhyāna of the paramātman.

According to the monistic view adopted by this text every individual self is in essence the Supreme Self-the one allpervading reality. ātmadhyāyī आत्मध्यायी (HP I 40), one who contemplates on ātman, one of the essential conditions for attaining niṣpatti stage. The practice of siddhāsana with moderate diet and contemplation on ātman leads one to the attainment of niṣpatti stage of yoga.

ātmapratyakṣa आत्मप्रत्यक्ष (GS VI 15, VII 7), seeing the ātmā¹. Ātmapratyakṣa and looking for ātmārāma are considered by Gheraṇḍa to be the characteristic features of śāmbhavīmudrā. Nothing more of this mudrā, which is often supposed to be the final achievement of a yogī, is said in this text except that he has to look inside between the eyebrows and see the ātmā¹.

In I 11 pratyakṣamātmanaḥ (= ātmapratyakṣa) is said to result from dhyāna, in VI 15 from tejodhyāna, and from VII 5 it is clear that, according to GS, The dhyāna aspect of rājayoga is śāmbhayimudrā.

ātmabhāvabhāvanā-1 आत्मभावभावना-१ (YS IV 25), the self-regarding sentiments, including body consciousness. On attaining viveka, identification of oneself with one's body and one's possession, is effaced.

ātmabhāvabhāvanā-2 आत्मभावभावना-२ (VB IV 25), problems in the yogī's mind: how I got into this wretched existence and how can I get rid of it. According to Vyāsa, these problems do not disturb the yogī after the attainment of viveka. Vyāsa's interpretation of this

term, however does not seem to be correct in this context. See $\bar{a}tmabh\bar{a}vabh\bar{a}van\bar{a}^1$.

ātmarati आत्मरित (BG III 17), rejoicing in the self. One who finds joy only in the self and not in the sensuous objects. ātmavinigraha आत्मविनिग्रह (BG XIII 7, XVII 16), control over the body-mind aggregate. Ātmavinigraha consists in withdrawing this complex from flowing towards its objects and applying to righteous path, i.e. to Self. The term ātman here refers to the causal aggregate of body and mind. In XVII 16, ātmavinigraha refers to a general control over mind as a part of mental austerity.

ātmaviśuddhi आत्मविशुद्धि (BG VI 12), here ātman refers to antaḥkaraṇa, i.e. internal organ. In order to purify it one should resort to the practice of yogaby drawing senses from their objects and concentrating upon one object.

ātmaśakti आत्मशक्ति (GS III 40), kuṇḍalī. ātmā-1 आत्मा-१ (GS IV 2-5, VII 2; ATU 10; ANU 5; ABU 16; YS IV 25), self, just self without any philosophical significance, e.g. pratyāhāra is self-control (GS IV 2), ātmapratīti आत्मप्रतीति self-confidence, ātmaśakti one's own power and ātmabhāva self-consciousness. Pratyāhāra, according to ANU, consists in seeing manas¹ as well as all the objects as parts of the self, and not as external objects.

Whether an object actually exists in the outside world or not, the cooperation

of **ātmā**¹, **manas**¹ and *cakṣurindriya* is necessary for its visual perception or apprehension.

ātma-2 आत्मा-२ (G 1, 2, 87, 89, 91, 97; GS I 11, III 49, V 83, VI 22, VII 3, 8, 12, 16-20; TSM 9, 100, 129, 144, 147, 152, 161; DBU 6, 8; ABU 11-12), brahman. It is described as caitanya, advaita, śāśvata and para. Although it is all-pervading and therefore, present in the body also, yet the body is not the ātman¹.

Atman¹ is saccidananda. The ultimate object of yoga⁴, according to these texts, is the realization that the $yog\bar{i}$ is brahman. Yonimudrā and śāmbhavimudra help him in attaining this realization. Unity of manas1 and ātman² is brought about in the state of samādhi¹ and jyotirdhyāna is said to be the dhyana of the tejomayabrahman तेजोमयब्रह्मन्. Sthuladhyana is not explicitly described as the dhyana of mūrtimaya मूर्तिमय brahman; but this seems to be the implied meaning, as guru² is described as the brahman himself. According to Gorakşa, the characteristic feature of dhyana, as opposed to dhāranā, is that ātman² is the object of meditation in it.

TSM describes **ātmā**² as **brahmā**, **viṣṇu** and **śiva** as **cinmātra** and **caitanya** as **paramātmā** and **parātmā**. It is the ultimate reality which is said to be *pratyagānandarūpa* प्रत्यगानन्दरूप and *anantaśaktisaṃyukta* अनन्तशक्तिसंयुक्त, but which still appears

in the form of jagat जगत (universe). It appears as the kośas of the living body, though it itself is nirvikāra. The vikārāḥ विकाराः (transformations) are of iiva, but it appears as if they are of siva who is sadāśiva. It is on account of ahankāra² that sadāsiva becomes jīva. It is believed that sadāśiva is deluded on account of its sangati (samyoga) with avivekaprakṛti अविवेक-प्रकृति. The $vog\bar{i}$ sees **śiva** in the **vikāras** but does not see the vikāras in siva. Brahman is said to be turyatita and to reside in the brahmarandhra. DBU describes atma1 as subtle and compares it to an infinitesimal part of the point of a hair. As smell is in the plant, butter in the milk, oil in the seed and as gold is in the ore, so everything is in brahman as if it were a thread running through all these beads. He who knows brahman lives in brahman. According to ABU, as the **ātmā** of different individuals, brahman exists differently in different individuals, but in reality it is one and only one, just as $\bar{a}k\bar{a}\hat{s}a^{1}$ is one and still it assumes different forms in different containers. Even in a single individual the one ātmā¹ appears to be different in the states of jagrat, svapna and susupti. In fact it is one and the same **bhūtātmā** (reality behind things).

Another analogy used to illustrate the one reality appearing differently in different things, is that of the one moon which is reflected at innumerable spots.

If one looks at the reflections below one sees many moons, if one looks at the sky above one sees only one moon. *Gorakṣa* claims that the object of writing the śataka शतक is to lead the aspirant to ātmabodha आत्मबोध (self-realization), the supreme realization.

ātmā-3 आत्मा-३ (KU 4), essence inside the body. The entire ātman³ is to be made saturated with om², which is to be slowly repeated in all its twelve mātrās¹.

ātmā-4 आत्मा-४ (YS II 21), essence. The very essence of dṛśya¹ consists in being an artha³ for the puruṣa¹, i.e. that which the puruṣa² sees.

ātmā-5 आत्मा-५ (ABU 4), subject in the subject-object relation of cognition. In the state of manasaḥ hṛdi sannirodhaḥ मनसः हदि सन्निरोधः (merging of mind in the self) this subject disappears.

ātmā-6 आत्मा-६ (VS V 2-5; BY IX 9), true self, other than jīva. Ātman is called jīva when it is enjoined with body and it is this jīva which is subject to birth and death and not the ātmā. According to BY, ātmā is the principle of life and sensation, situated in the form of bindu in the dormant serpant (kundalinī).

ātmārāma आत्माराम (GS III 64), the bliss of self-realization. In two different contexts, Gheraṇḍa uses two phrases ātmārāmaṃ nirīkṣyeta आत्मरामं निरीक्ष्येत and ātmapratyakṣamānayet आत्मप्रत्यक्षमानयेत्. While ātmapratyakṣa is to be brought about, according to him, ātmā-

rāma is to be looked for and enjoyed. cf. ātmapratyakṣa.

ātmāśī आत्माशी (VB II 9), abhiniveśa.

ādarśa आदर्श (YS III 36), vision (intuitions, higher). In the normal course our sensuous cognitions take place through the instrumentality of the sense-organs and therefore, we are limited by the limitations inherent in the sense-organs. But when knowledge of puruṣa has been obtained by performing saṃyama as indicated in YS III 35, these limitations fall away and it is possible for the yogī to perceive everything without being influenced by such limitations of sense-organs and this is called intuitional or higher vision.

ādāna आदान (SK 28; TSB 6), vrtti of the karmendriya known as pāni. It is difficult exactly to define pāņi or ādāna. The best English translation for the latter would be manipulation. For manipulation it is not always necessary to use the hands or to use hands and hands alone. A football stroke, e.g., can be manipulated with head, or foot, or a push with any part of the body. All this is **ādāna** and the **indriva**¹, of which it is the vrtti, is pāni. Adāna would include all behaviour which is not sexual, excretory, locomotive, or expressive (i.e. of the nature of language, whether symbolic or traditional). According to TSB, ādāna is the kārya¹ and the vişaya4 of pṛthivī which is obviously the pāṇi amśa¹ of it.

ādi आदि (HP IV 85, 86), in the beginning. Svātmārāma classifies the practice of nādānusandhāna into three stages. The ādi stage brings about particular type of internal sound resembling ocean, thunder, big drum etc. This stage may be equated with ārambhāvasthā and ghaṭāvasthā, the first two stages in the sequence of four stages of nādānusandhāna.

āditya-1 आदित्य-१ (G 46, 80), sūrya (the sun). G compares the maṇipūraka-cakra¹ to the rising sun.

Adityamaṇḍala is the fire described in this text as prajvalajjvalanajvālā-puñja মুজ্ঞলেজ্জ্জ্ললাজ্জ্জ্লালাড়্জ (a mass of flames of burning fire) which is supposed to be in the nābhi. while performing prāṇāyāma² the yogī is advised to medicate on it.

āditya-2 आदित्य-२ (BY IX 90), name of the Sun God. Since it gives life to all beings, it is called āditya.

ādinātha आदिनाथ (HP I 1; SSP I 1), the first teacher of the Nātha cult. It is found to be synonym of Lord Śiva, thus Lord Śiva is called ādiyogācārya. Svātmārāma has offered his salutations to ādinātha in the beginning of the text.

ādeśa आदेश (SSP VI 96-97), a technical term indicating identity of the three principles, viz., ātmā, paramātmā and jīvātmā.

ādyantavanta आद्यन्तवन्त (BG V 22), having a beginning and end. The worldly pleasures have a beginning and an end. The contact of senses with the objects mark the beginning of a pleasure and their separation is an end of the pleasure.

ādyapiṇḍa आद्यपिण्ड (SSP I 28), the primordial piṇḍa. It consists of five principles: paramānanda, prabodha, cidudaya, prakāśa, and so'haṃ-bhāva. Each principle further contains five characteristics. (cf. SSP 23-27).

ādhāra-1 आधार-१ = mūlādhāra मूलाधार (G 10, 11, 78; YSU I 168, V 5, VI 22-33; YCU 4, 6; YKU III 9, 10; DBU 43-4), the lowest cakra¹ in the body. G places this four-petalled lotus in the gudā, which is called ādhāra; and in that, according to him, is said to reside the yogī (G 11). In G 10, however, yonisthāna is said to be between ādhāra and svādhisthāna.

According to Kuvalayānanda and Shukla, the **ādhāracakra**¹ is said to be in **gudā**, because it is nearer to the anus than the sexual organ. G describes this **cakra**¹ as bright burning gold.

Concentration on this is prescribed by Gorakṣa and it is enjoined by him that, while imagining this bright burning centre, the yogī should think of ātmā¹. This cakra¹ is thus one of the nine dhyānasthānas of Gorakṣa, who considers it to be the seat of vahni. According to YSU, mūlādhāra is the triangular region between gudā (anus) and meḍhra (penis). There resides śiva¹ in the form of jīva.

The kuṇḍalinī śakti, vāyu4 and vahni

also are there, and bindu and nada, hamśa and manas¹, according to this text, all rise from this region. It is called the kāmarūpapītha and is said to bring to the $yog\bar{i}$ all that he desires. The universe is said to arise from the ādhāraśakti and again to resolve into it. In this sense, the entire universe sleeps when the ādhāraśakti (kundalini¹) sleeps, and wakes when she wakes. He who knows ādhāra¹ gets freedom from the fruits of his evil deeds and sees light. The three Vedas are in ādhāra. The susumnā, idā1 and pingala meet in the hind portion of ādhāra¹. Paścimalinga पश्चिमलिंग is in ādhāra¹. Candra and sūrya² are also in the hind portion of **ādhāra**¹. **Ādhāra** is thus one of the most important cakras¹. Taking it do be lotus-like, YCU considers ādhāra to be fourpetalled. YKU, considers mūlādhāra to be one of the six cakras¹ and equates it with guda. From the point of view of modern physiology, ādhāra may be taken to be the coccygeal plexus.

ādhāra-2 সাঘাৰ-২ (GS III 12; HP III 72).

The sixteen ādhāras referred to in this text may be the sixteen paths, which are supposed to run from the throat to the upper parts of the head. Brahmānanda, the commentator of HP, mentions the following as the 16 ādhāras: toes, ankles, knees, thighs, perineum, penis, navel, chest, neck region of the throat, tongue, nose, the spot between the eyebrows, forehead (lower part), upper-

most part of the forehead, and top of the head. But this does not seem to be relevant.

ādhāravāta आधारवात (YSU VI 27-8), the prāṇa⁴, which is to be raised from ādhāra¹ and sent up to the head along suṣumnā. Ādhāravātarodha is said to be the very essence of yoga⁴. It consists in restraining this prāṇa⁴ from going up the iḍā¹ or piṅgalā way and sending it up through the susumnā.

ādhārākuñcana आधाराकुंचन (HP II 27),

contraction of the (ādhāra). This is practised in such a manner as to suck the water into the colon. This is the specific technique of vasti (colon lavage). ādhidaivika आधिदैविक (TSB 8; YKU I 77; VB I 31), divine. TSB speaks of an ādhidaivika aspect of the organs of the body and names the twelve presiding deities of the twelve principal organs. YKU speaks of the ādhidaivika body which Upanisadbrahmayogi paraphrases as pratyagabhinnaparabrahman प्रत्यगभिन्नपरब्रह्मन् (the one Supreme Reality); and VB (I 31) speaks of ādhidaivika pain which VM explains as pain caused by an evil star, a yaksa यक्ष, a rākṣasa राक्षस (demon) etc.

ādhibhautika आधिभौतिक (TSB 8; YKU I 77; VB I 31). The twelve nāḍis² mentioned seem to be the ādhibhautika aspect of the twelve aṅgas¹ according to TSB. VB speaks of ādhibhautika pain, which VM explains as pain caused by a living being, e.g., snake, tiger; and YKU advises the yogi to

merge his **ādhibhautika** body in his **ādhidaivika** body.

ādhyātmika आध्यात्मिक (TSB 8; VB I 31), pertaining to the self. It appears that TSB considers the ten indriyas¹⁻², manas¹ and buddhi¹ to be the adhyātmika organs, or the ādhyātmika aspect of the body. According to VM, bodily as well as mental pain is ādhyātmika (cf. commentary on SK). ānanda-1 आनन्द-१ (SK 28; TSB 6), the

ānanda-1 आनन्द-१ (SK 28; TSB 6), the vṛtti¹ of the indriya¹-² known as upastha (sexual behaviour). cf. vacana. TSB considers it to be kārya¹ and a visaya of prthivī.

ānanda-2 आनन्द-२ (GS III 31, 41, V 57, 83, VII 8, 11, 13, 15; G 84, 99), a kind of experience which everyone can have, though it is not the same as sense pleasure, or aesthetic enjoyment. As a $vog\bar{i}$ practises khecarī mudrā he feels happier and happier day by day. This is the beginning of ananda2. while aesthetic enjoyment and sense-pleasure are felt for the time being, ananda is the true yogi's constant companion. He is always in the state of ananda2. The $yog\bar{i}$ who practises $pr\bar{a}n\bar{a}y\bar{a}ma^2$ also gets this experience; and the essence of bhakti भक्ति (devotion) too is ānanda². Ananda² of a bhakta भक्त (devotee) is often expressed by his shedding tears and getting gooseflesh. Thus **ānanda**² is the happiness of peace and is not what Patañjali calls hlāda (YS I 14). While jāti, āyu and bhoga are the vipākas of karmāśayas, hlāda

and paritāpa are their phala. Ānanda² is experienced in the state of complete detachment, not hlāda.

ānanda-3 आनन्द-३ (YS I 17; GS V 57), a peculiar kind of bliss which only the $yog\bar{i}$ gets, as the result of his $yoga^4$, in the state of samādhi¹. Others do not know it. This ananda is also said to be experienced as a result of the union of manas¹ and ātmā² which Gheranda calls samādhi1. The presence of ānanda³ clearly shows that such samādhi1 is samprajñāta Patañjali's terminology, ānanda³ being one of the four kinds of contents of samāpatti, which make cittavrttinirodha samprajñāta. This ānanda3 is said to be experienced in kumbhaka of the murccha variety (cf. GS V 83), because that too involves the union of manas¹ and ātmā¹. To distinguish it from the other types of ananda we can call it sahajānanda सहजानन्द.

ānanda-4 आनन्द-४ (MBU II (1) 7; TBU VI 1, 3), the Supreme Reality which, according to the Vedānta philosophy, is sat सत् - cit-ānanda. What exactly this ānanda⁴ is, only the person who has realised the Supreme Self, knows. It is obviously not an experience as we understand this word; and this is what distinguishes it from ānanda³ which is the samādhiprajñā of nirbīja-samādhi⁵ - an experience of advanced vogīs.

ānandabhairava आनन्दभैरव (HP I 5), name of a siddhayogi. One of the thirty-three **siddhayogīs** enumerated by Svātmārāma (to pay his salutation to all those **siddhayogīs**).

ānandānugata आनन्दानुगत (VBh I 17), the third of the four yoga regions of samprajñāta, the others being: (1) vitarka, (2) vicāra and (4) asmitā. Those modes of consciousness are in ascending order and different in their contents. Thus the anandanugata level or mode of citta has bliss (ananda) as its content and is of the form 'I am happy'. The object-ananda cannot be grasped through senses, rather it transcends the sensuous sphere and hence it cannot be said that just there is a distinction between vitarka and nirvitarka, or between vicāra and nirvicāra, there can be a similar distinction between **ānanda** and *nirānanda*. Again the contrary/opposite/negative of ānanda is not nirānanda but pain or duhkha. Further, in this mode of experience there is absence of pain which is due to predominance of sattva in the citta.

anuśravika आনুপ্রবিক (VM, VBh I 15), heard (mentioned in the scriptures). This includes all such things which cannot be seen but which may be supposed to exist, e.g., heaven, the state without body, the state of absorption in prakṛti etc. Yogi has to master all the five jñānendriyas to such an extent that he derives no pleasure either through the seen objects or learnt through hearsay (ānuśravika).

āpa সাম (SSP I 39), one of the five gross elements, working in the human body in five forms: saliva, urine, semen, blood, and sweat-these five are due to āpa.

āptavacana आप्तावचन (SK 4, 5). cf. vacana and āgama.

ābhāsvara আমাৰে (VB III 26), gods who reside in the second loka, i.e. the tapoloka along with mahābhāsvaras and satyamahābhāsvaras. They all have the entire prakṛti under their control.

ābhoga-1 आभोग-१ (VB I 17), dwelling upon. Vyāsa's idea seems to be that a viṣaya, object of consciousness always has a concrete as well as subtle aspect. In vitarkānugata samāpatti the citta dwells on the concrete aspect like an image. But every object has a subtle aspect also, e.g. every earthen pot is, if analysed metaphysically found to be made up of tanmātrās. In the savitarkā and nirvitarkā samāpattis the citta² ignores this subtle constitution of the object of consciousness and concentrates on its concrete aspects only.

ābhoga-2 आभोग-२ (VB I 15), bhoga. ābhyantara-1 आध्यन्तर-१ (VB II 50), preceded by complete inhalation. Cessation of respiration after complete-inhalation, is ābhyantarakumbhaka (prāṇāyāma).

ābhyantara-2 (karma) आध्यन्तर-२ (कर्म) (VS I 22, 24), variety of nirvitarka-karma enjoined by the *Vedas* as a means for liberation Abhyantaranir-

vitarkakarma consists in observing the duties within self with the means of intelligence.

ābhyantara-3 (yoga) आभ्यन्तर-३ (योग) (VS II 57), internal yoga consisting of pratyāhāra, dhāraṇā, dhyāna and samādhi.

ābhyantara-4 (śauca) आभ्यन्तर-४ (शौच) (VS I 51), refers to internal śauca visa-vis external śauca, which consists in purification of mind through right deeds and spiritual knowledge.

ābhyantarakaraṇa आभ्यन्तरकरण (SK 33), antahkarana.

ābhyantaravṛttiprāṇāyāma आभ्यन्तर-वृत्तिप्राणायाम (YS II 50), one of Patañjali's first three prāṇāyāmas². It is that kumbhaka¹ in which the chest is expanded to the full. Hence it is always preceded by complete inhalation. In this context the word vṛtti¹ is used in YS for the state of the chest, and ābhyantaravṛtti for the state in which the lungs are full to capacity.

āmbhasīdhāraṇā आम्भसीधारणा (GS III 60, 73), one of the five dhāraṇā mudrās. It consists in taking the prāṇa⁴ and the citta² to the spot in the throat which is the seat of the ambutattva and retaining them there for two hours. Gorakṣa calls it vārunīdhāraṇā. (cf. ap.) Ambu is white and pretty like the conchshell, the moon, and the jasmine flower. GS calls it kilāla किलाल (nectar). It is to be imagined along with viṣṇu and the letter va which is the bījamantra of viṣṇu

and therefore, the mystic sign for the god viṣṇu.

Ambhasidhāraṇā is said to ward off unbearable sorrow and sin. cf. vāruṇi (= vāriṇi) dhāraṇā.

āyataprāṇa आयतप्राण (ANU 10), a person accustomed to prolonged phases of respiration. Upanişadbrahmayogī applies the lengthening only to rucira kumbhaka¹, but there is nothing in the text to show that the meaning should be so restricted. It appears that the complete mantra (gāyatrī) is to be mentally repeated twice not only in the state of kumbhaka1 but also while exhaling and inhaling. ANU 10 can also be interpreted as referring to three units of time devoted to rucira, three to recaka and three to puraka. In this way **prāṇāyāma**² should mean that (1) there should be kumbhaka¹, (2) recaka, pūraka and kumbhaka1 should all be long and (3) they should be equal in duration.

āyāma आयाम (YKU I 19), synonym for kumbhaka.

āyu आयु (YS II 13), length of life-one of Patañjali's three karmavipākas. According to him, one's āyu is determined by one's own ways of the present and previous lives. If one succeeds in acquiring the way of life in which one's actions are not motivated by the kleśas, then there is no vipāka of the actions which he performs-neither jāti¹, nor āyu, nor bhoga. Such a person will neither have any pleasant or unpleasant experiences, nor a long life, nor will he be born again after death. Actions bear fruit only when they are rooted in the kleśas. This is Patañjali's theory.

ārambha आरम्भ (VU V 71; YTU 20; HP IV 69), one of the four bhūmikās भूमिका (stages of progress) in yoga⁴, the other three being ghata, paricaya and nispatti. For these stages HP uses the word avasthās. Arambhāvasthā, according to this text, begins when one gives up bāhyakarma बाह्यकर्म and resorts to antahkarma. Upanisadbrahmayogi comments that thinking, speaking and acting are all bāhyakarma. The three groups of organs referred to in the VU, as the organs of $b\bar{a}hyakarma$, are (1) action organs, (2) sense organs, and (3) the internal organs antahkarana consisting of manas1, buddhi and ahankāra1. Bāhyakarma is in this way not action as we understand this word ordinarily. According to YTU, the signs of arambhavastha are light body, bright face and good appetite. It appears that while paricaya and nispatti states may be attained even without very great success in hathayoga, arambha and ghata are the first two stages of comparatively advanced hathayoga in the sense of yoga performed mainly with the body.

ārjava-1 आर्जव (VU V 12; SAU I (1) 4, 10; TSM 32; DU I 6, 16), straightforwardness (absence of cunningness). It is one of the ten yamas¹, The following definition given in SAU is

more difficult than the term defined: adopting the same attitude towards persons who perform and those who do not perform-by word, deed or thoughtthe acts which are enjoined and eschew or do not avoid those which are prohibited. According to TSM, arjava is moral uprightness and according to DU, it consists in behaving and feeling in exactly the same way towards one's enemy, friend, wife, son and one's own self, i.e., making no difference between friend and foe, between self and notself

ārjava-2 आर्जव-२ (VS I 49; BG XIII 7, XVII 14), straightforwardness, one of the ten yamas. Leaning towards actions prescribed by the scriptures and desisting from other than the prescribed (forbidden) actions, and while following them maintaining an equanimity in mind, speech and action is called arjava. According to Gita, ārjava lies in straightforwardness of body and senses both. It is one of the essential qualities of physical austerities (śārīrika-tapa).

ārta आर्त (BG VII 16), distressed. Ārta is one among the four classes of devotees. Others are (2) seeker of knowledge, (3) seeker of wealth, and (4) wise man.

ārurukşu आरुरुक्ष (BG VI 3), desirous of taking to yoga. Specially one who has not taken to yoga (dhyānayoga) due to unsteady mind, but is desirous of practising it.

ālambana-1 आलम्बन-१ (YS I 10, 38, IV 11), object of consciousness. According to Patañjali, it is easier to dwell on certain' objects of consciousness than on others. One class of such objects are those of which one has had a vivid and pleasant dream. Knowledge of such objects Patañjali calls svapnanidrājñāna स्वप्ननिद्राज्ञान (knowledge gained in sleep in the shape of a dream). The statement that every vāsanā is directed towards an object of consciousness (cognised object) shows his keen insight into psychology.

ālambana-2 आलम्बन-२ (BY II 60), support, used for omkāra. Since omkāra works as a great helping principle, to reach the highest abode of brahman, it is called **ālambana**.

ālasya-1 आलस्य-१ (YS I 30; HP II 55; ANU 27; YKU I 59; TBU I 40). According to Patañjali, **ālasya** is one of the nine antarāyas. Brahmānanda in his jyotsnā ज्योत्स्ना describes ālasva as disinclination to exertion on account of a feeling of heaviness of the body and the mind (*jyotsnā* HP II 34).

According to YTU, alasva is one of the six vighnas, none of which is described or defined in this text. According to ANU, it is one of the seven things that a $yog\bar{i}$ should avoid; according to YKU, it is one of the ten obstacles in the path of voga⁴, and according to TBU, one of the nine impediments in the way of samādhi.

ālasya-2 आलस्य-२ (VB, VM, VBh I 30),

one of the obstacles (antaraya) in the practice of voga. Alasva has been explained by Vyāsa as inactivity of the body and mind due to heaviness. According to Vācaspati, heaviness of the body is caused by phlegm whereas the heaviness of mind is caused by inertia Vijñānabhiksu further adds that lack of activity (alasya) causes the lack of the practice of the means of yoga (tābhyāmhetubhyāmapravṛttiḥ samādhisādhanānuṣṭhānam ताभ्यां हेत्-

भ्यामप्रवृत्तिः समाधि-साधनानुष्ठानम).

āloka आलोक (YS III 5, 25), seeing Pravrttyāloka प्रवृत्त्यालोक is therefore the rising of a visayavatī (concrete) jyotișmatī (light) pravṛtti as a result of a practising āsana¹ and prānāyāma² in the light of which the $yog\bar{i}$ sees imperceptibly small, hidden and distant objects. Prajñāloka is thus the rising of a samādhi-praj $\tilde{\mathbf{n}}$ ā. When a $yog\bar{i}$ tries to go into the state of samādhi1 with the object of knowing about an imperceptibly small or a hidden or a distant object he does not imagine anything but waits for a clear picture of the object spontaneously standing out before him. This would be his samādhi¹prajñā⁴ and seeing it would be prajñāloka.

ālocana आलोचन (SK 28), vrtti of a sense organ which includes both sensation and perception. SK's statement that ālocanāmātravṛtti आलोचनामात्रवृत्ति is directed towards $r\bar{u}pa^1$ etc. gives the reader an impression that alocana is only sensation. But rūpa¹ here covers both light and forms of objects as seen. āvaraṇa आवरण (YS II 52, III 43, IV 31), covering screen. Patañjali believed that by practising prāṇāyāma², yogīs begin to experience internally aroused sensations. Most of the yogīs report that they see a circumscribed patch of blue light. This light is said to be seen only when a built-in screen is removed by the practice of prāṇāyāma².

Patañjali speaks of another screen, inherent in every citta¹- the screen which hides universal knowledge. This curtain, according to Patañjali, is lifted when, as a result of very long and arduous practice of yoga¹, the highly advanced yogī succeeds in taking his citta¹ out of his body; and also when all the kleśas get prasupta and prompt no behaviour. (cf. bahirakalpitāvṛtti¹).

āvṛtti आवृत्ति (BG VIII 23), subject to birth and rebirth. Opposite of anāvṛtti.

āśaya आश्च (VB, VM I 24, II 12), storehouse, vehicle, residue. Since in the theory of the law of karma, it has to be assumed that different karmas take different time for the process of maturation and fructification, it becomes necessary to assume that these karmas remain somewhere in some subtle form. Thus the storehouse of these karmas is called karmāśaya. They are called vehicles because by their means the residue, which show themselves as fruitions are embedded as potencies in the citta.

āśiş आशिष् (YS IV 10; VB II 9; IV 10). In this context the word is used for the innate unconscious wish to live, called abhiniveśa. VB has called it a vāsanā. Patañjali's argument is that since this disposition is beginningless, it is obviously wrong to think that all dispositions called vāsanās are the aftereffects of experience of the present or any past life. Abhiniveśa, according to Patañjali, is not a memory of painful previous deaths as Vyāsa thinks. Vāsanās may be conscious or unconscious, formed in this life or a previous one, or absolutely beginningless and inherent in every citta1.

aśraya-1 সাস্ত্ৰ- (SK 12), facilitation, reinforcement. One of the **vṛttis¹** of the three **guṇas¹**, according to this text, is reinforcing the activity of another. This is the opposite of their **vṛtti¹** which in SK is called **abhibhava**.

āśraya-2 आश्रय-२ (SK 41, 62), that without which something cannot exist. The śānta, ghora and mūdha viśesas are called the āśrayas of lingas1; because if prakrti had not provided these viśesas there would have been neither lingas nor mātāpitrjas, nor prabhūtas, which are called by Īśvarakṛṣṇa śānta, ghora and mūḍha viśesas respectively. Since every material must exist in some form or the other, prakrti2 must also have one or many forms. It is found to have many and *Īśvarakṛṣṇa* therefore, speaks of nānāśraya नानाश्रय prakṛti² and bahutva बहुत्व multiplicity of prakrti2.

āśraya-3 সাপ্স্য-২ (VB IV 11), ground, that in which something inheres as vāsanās in manas² (ciita¹). Without a citta¹, of course, vāsanās would not exist.

āśraya-4 आश्रय-४ (SK 16), overpowering, dominance. Different forms and shapes of avvakta are seen because of the dominance of one guna over the others in different ways and in different degrees, of which the number is legion. āsana-1 आसन-१ (YS II 29, 46; DU I 4; TSM 34, 52-3; VU V 11; KU 2; SAU I (1) 2-3, I (3) 1-14; HP I 17; G 4-7, 54, 67; YCU 2, 109; GS I 10, II 6, V 45; DBU 41; YTU 24), posture. It is one of the eight angas1 of the astāngayoga1 अष्टांग-योग.Patañjali describes it as long lasting comfort without the least inclination to move any part of the body, now known as stability. $\overline{\mathbf{A}}\mathbf{sana}^1$ is thus a state of undisturbed homeostasis. an undistur-bed maintenance of tonic rhythm. It lasts so long as no discomfort is felt. Thus, according to Patañjali, **āsana**¹ is essentially a meditative posture and not an exercise performed for physical culture. Like Patañjali, KU also restricts the denotation of the term **āsana**¹ to meditative pose. By *āsana*mavasthita आसनमवस्थित the author only means remaining steady in any pose. Only eight asanas1 are enumerated and described in SAU. Nine asanas are described in DU and it is claimed here that through **āsana**² one conquers the three worlds. $\overline{A}sanajaya$ is also said to purify the $n\overline{a}d\overline{i}s^2$.

For G **āsana**¹ is one of the six **yogā ṅgas** and there are as many **āsanas**¹ as there are species (or types) of animals. If the number of such classes be 84 lakhs, one representing each lakh will give the number 84.

However, according to G, of these 84 only two are the typical $\bar{\mathbf{a}} \mathbf{s} \mathbf{a} \mathbf{n} \mathbf{a} \mathbf{s}^1$ siddh $\bar{\mathbf{a}} \mathbf{s} \mathbf{a} \mathbf{n} \mathbf{a}$ and $\mathbf{k} \mathbf{a} \mathbf{m} \mathbf{a} \bar{\mathbf{l}} \bar{\mathbf{a}} \mathbf{s} \mathbf{a} \mathbf{n} \mathbf{a}$. According to HP also, the number of $\bar{\mathbf{a}} \mathbf{s} \mathbf{a} \mathbf{n} \mathbf{a} \mathbf{s}^1$ declared by Lord $\mathbf{S} \mathbf{i} \mathbf{v} \mathbf{a}$ is 84, of which the most important ones are: (1) siddha, (2) padma, (3) simha, and (4) bhadra. Practice of $\bar{\mathbf{a}} \mathbf{s} \mathbf{a} \mathbf{n} \mathbf{a}^1$ is also said in G to cure diseases; and dh $\bar{\mathbf{a}} \mathbf{r} \mathbf{a} \mathbf{n} \bar{\mathbf{a}}$ is advised to be practised after $\bar{\mathbf{a}} \mathbf{s} \mathbf{a} \mathbf{n} \mathbf{a}^1$, $\mathbf{p} \mathbf{r} \bar{\mathbf{a}} \mathbf{n} \bar{\mathbf{a}} \mathbf{v} \bar{\mathbf{a}} \mathbf{m} \mathbf{a}^2$ and $\mathbf{p} \mathbf{r} \mathbf{a} \mathbf{v} \bar{\mathbf{a}} \bar{\mathbf{h}} \bar{\mathbf{a}} \mathbf{r} \mathbf{a}$ have been mastered.

According to GS, **āsana**¹ is one of the seven constituents of **ghaṭasthayoga**. No definition of the term is given, but thirtytwo **āsanas**¹ are described in detail. The only thing said about **āsana** in general is that, it leads to toughness (**drdhatā**) of the body.

According to YTU, **āsana**¹ is one of the twenty members of **haṭhayoga**. Only four **āsanas** are prescribed in this text as in HP viz., **siddha**, **padma**, **siṃha** and **bhadra**, but are not described.

āsana-2 आसन-२ (GS II 44, V 38; TSM 90-91), seat (the carpet etc. on which the *yogī* sits for performing **yoga**⁴). It may be made of wool (like a blanket) or grass, or it may be a deerskin, or a

tiger-skin. According to TSM **āsana**² should be a wooden seat covered by grass, black deer-skin, etc. twice as long as it is broad.

āsana-3 आसन-३ (MBU II (2) 5), niścayajñāna निश्चयज्ञान. For a yogī who is successful in amanaskayoga the eight yogāṅgas are not prescribed. Hence he is not to practise āsana¹ niyama⁴. Niścayajñāna (True knowledge) is his āsana³.

āsana-4 आसन-४ (TBU I 15, 25), that state

in which there is uninterrupted brahma-

cintana (meditation on brahman). That is a sukha (= pleasure = bliss) in itself and drives away all the other pleasures, that is, worldly pleasures from the mind. Asana⁴ is one of the fifteen angas of yoga⁴, according to this text, but it is not posture. It is a state of mind. asana-5 आसन-५ (YKUI2, 4), one of the three means of bringing about samirajaya. The other two means are said to be mitāhāra and śakticālana. Only two āsanas⁵ are recommended, viz. padma and vajra. Asana⁵ thus seems to mean pose which stimulates the spinal cord to arouse cutaneous

āsana-6 आसन-६ (TSM 29), uttama उत्तम āsana⁶ is here said to be sarvavastunyudās īnabhāva सर्ववस्तुन्युदासीनभाव (vairāgya). In some Yogopaniṣads, yoga⁴ terms are described in a manner other than that in which they are described in texts ordinarily known as yoga⁴ texts.

sensations internally.

āsana-7 आसन-७ (BG VI 11), seat.

āsana-8 आसन-८ (VB, VM, VBh II 46; VS I 33, 35, 67; SSP II 34), steady and comfortable sitting posture. Vyāsa, while commenting on YS II 46, enumerates eleven asanas and suggests many more which may secure steadiness and ease. The name of eleven asanas mentioned by Vyāsa are-padmāsana, vīrāsana, bhadrāsana, svastika, dandāsana, sopāśraya, paryanka, kroñcanisadana, hastinisadana, uṣṭraniṣadana, and samasaṃsthāna. Vyāsa has tried to define **āsana** by enumerating them but he has not described the technique. VM gives the technique thereof. VBh also gives the technique of these asanas but by quoting from vasistha and Yogapradipa and others. Apart from these eleven asanas, he recognises mayūrāsana also. In fact, for him there are as many asanas as there are living beings. Vasistha enumerates ten āsanas, which to him are more important and further he says that out of these only four, which he does not specify, are most important for the attainment of liberation. While quoting Vasistha in the vārtika of YS II 46, Vijñānabhiksu gives the names and technique of asanacatustaya, which seem to be the four most important āsanas referred to by Vasistha in VS, viz., padmāsana, vīrāsana, bhadrāsana, and svastikāsana.

SSP describes **āsana** as being steady in one's own form. One should be steady by adopting any one of such

postures as svastikāsana, samāsana, padmāsana, siddhāsana etc.

āstikya-1 आस्तिक्य-१ (VU V 13; TSM 33; SAU I (2) 1, 4; DU II 1, 6), belief in the *Vedas*. According to these texts, it is one of the ten **niyamas**¹. TSM, however, considers belief in God to be a part of āstikya. For SAU, āstikya is faith and trust in the various duties enjoined or prohibited by the *Vedas* and DU includes in it faith in the *smṛtis* too.

āstikya-2 आस्तिक्य-२ (VS I 56; BG XVIII 42), one of the ten **niyamas**. Belief in and understanding of actions to be done and not to be done. Discrimination between good and bad action only can lead to right path. According to *Gitā*, faith in the teachings of the scriptures is āstikya.

āsurakabhāva आसुरकभाव (BY XII 17), the condition of mind in which everything is performed without any hitch, i.e., one never minds the ought and nought. One who resorts to it, perishes.

āsurīsampat आसुरीसम्पत् (BG XVI 4-6), demoniacal qualities. Ostentation (dambha दम्भ), arrogance (darpa), selfconceit (abhimāna), anger (krodha), insolance (pāruṣya), and ignorance (ajñāna अज्ञान) are the demoniac characteristics.

āsvāda आस्वाद (VB, VM III 36), cognition of divine taste. One of the five divine qualities that is attained through the saṃyama on sattva puruṣa. Vācaspati clearly indicates that

śravaṇa etc. refers to divinecognition: *śrotrādīnāṃ pañcānāṃ divyaśabdā-dyupalambhakānāṃ tāntrikyāḥ saṃjñāḥ śravaṇādayaḥ* श्लोत्रादीनां पंचानां दिव्यशब्दाद्यपलम्भकानां तान्त्रिक्याः संज्ञाः श्लवणादयः.

āharaṇa आहरण (SK 32), one of the three broad divisions of the vṛttis¹ of the karaṇas, the other two divisions being dhāraṇā and prakāśakaraṇa. While dhāraṇa is a joint vṛtti¹ of all the karaṇas (cf. sāmānyakaraṇavṛtti) and prakāśakaraṇa of all the buddh-indriyas and the antaḥkaraṇa, āharaṇa is the vṛtti¹ of the karmendriyas alone. It is the five-fold behaviour: vacana, ādāna, viharaṇa, utsarga and ānanda.

āhavanīya आहवनीय (BVU 6), one of the three sacred fires. It is placed on the eastern part of the sacrificial pandal. Its pit is square in shape. Makāra or om is here described as one of the many other sacred things as if it were āhavanīya itself.

āhārya आहार्य (SK 32), that which is the object of āharaṇa. It is here called the kārya of karmendriyas. Kārya¹, however, does not mean effect or action (vṛtti¹) but object (viṣaya). Āhārya is therefore, behaviour. While āharaṇa is the act of behaving, āhārya is that which is to be done. In English the gerundial form is used for both; e.g., we can say: he was shouting and also his shouting was in bad taste.

āhlāda आह्लाद (GS VII 14) = hlāda. āhitāgni आहिताग्नि (BY IX 125), knower of the five agnis is called the āhitāgni. During ātmayajña one should contemplate on all five agnis situated in the five different regions of the body. These five agnis and their regions are, (1) vaiśvānara in the lotus of heart, (2) gārhapatya agni in the stomach, (3) dakṣiṇāgni in the back. (4) āhavanīya agni in the mouth, and (5) śūnya agni in the head.

i-इ

icchā-1 इच्छा-१ (BG XIII 7), desire, the property of inner-sense (antaḥkaraṇa) and it is matter (prakṛti) because it is knowable. When experience of a pleasurable thing gives stimulation to see the same thing again and again, that is called icchā.

icchā-2 ইন্ডা-২ (SSP I 56), SSP describes as having five guṇas (modes), - (1) passion (unmāda), (2) impression (vāsanā), (3) wish (vāñcchā), (4) anxiety (cintā), and (5) endeavour (ceṣta).

iḍā-1 इडा-१ (G 18, 20, 23; YCU 16, 18, 21, 98; VU V 26; KU 16; TSM 70; DBU 52, 55; YSU I 93, V 18, 19, VI 6, 9; DU IV 3, 7, 9; SAU I (4) 9, 11), one of the components of the nāḍimayacakra² नाडीमयचक्र (the autonomic nervous system or perhaps only a part of it).

ida 1 runs on the left side. Soma (literally the moon) is its presiding deity. Along with pingala and susumna, it is a path for nervous impulses to travel. According to VU, it is one of the twelve

nāḍīs and is said to be situated on the left side of **suṣumnā**.

KU mentions **idā** among one of the three **nādīs** chosen by this text out of a total of 72,000. The other two mentioned by name are **suṣumnā** and **piṇgalā**.

According to TSM, this $n\bar{a}\dot{q}\bar{i}^2$ runs from **kanda** to the left $n\bar{a}s\bar{a}puta$ नासापुट (nostril). For SAU, $i\bar{q}\bar{a}^1$ is one of the fourteen selected $n\bar{a}\dot{q}\bar{i}s^2$ and according to DBU, one of the ten picked up by this text.

Sixteen nādīs are enumerated in YSU in the 5th chapter, of which $id\bar{a}^1$ is one. In the 6th chapter, however, $101 \text{ n}\bar{\text{a}}\bar{\text{d}}\bar{\text{i}}\text{s}^2$ are mentioned without being enumerated. Here also ida1 is said to be situated to the left of susumnā and is described as hemarūpa हेमरूप (golden). DU also mentions $id\bar{a}^1$ as one of the fourteen principal nādīs². It is, in this text, said to extend to the top of the left nostril and candramā चन्द्रमा (moon) is said to operate through it. In YSU, ida1 is mentioned as one of the sixteen nādīs2 which constitute the nādīcakra². It is said to terminate at the tip of the big toe, presumably the left. This is an unusual description of ida1.

iḍā-2 इडा-२ (YSU I 93; TSM 96; GS I 56, V 43, 49, 52, 66; HP II 10), left nostril. iḍā-3 इडा-३ (VS II 27, 39; BY IX 96), one of the fourteen important nāḍis, situated on the left side of suṣumnā, in the kanda and stretched up to the left nostril. According to BY, idā and suṣumnā both nāḍis have been conceived in the form of raśmi (rays). indra-1 इन्द्र-१ (TSB 8), one of the gods who reside in the twelve nāḍis in the shape of twelve prāṇas¹.

indra-2 इन्द्र-२(YCU 72), he who enjoys, in this context, brahman as the enjoyer. The four purusas who are said to be the lords of the four avasthas are the four aspects of indra² who, in its turn, is an aspect of brahman the enjoyer. The different gods mentioned here are also the different forms, or aspects, of brahman. As such, they are said to be the lords of the different aspects of **prakrti**¹. They are the subjective side of reality, prakrti being the objective side. This however is not the sense in which the word indra is used in the purānas पुराण. Brahman being saccidānanda ānanda³ is his nature and whether we can speak of an aspect of brahman as enjoyer of ānanda³ is an unsolved problem.

indravajra इन्द्रवज्र (KU 13), dhāraṇā that pierces through the marmajaṅgha मर्मजंघ, the knee joint, rather the innermost part of the knee joint which is probably a nervous structure-may be a complex synapse. It is to be unhesitatingly cut by dhāraṇā before the nāḍīs in the throat are so cut, because it is one of the cords by which we are bound to the body. The dhāraṇā by which the yogi cuts the marmajaṅgha is here called indravajra.

indriya-1 इन्द्रिय-१ (SK 6, 26, 34; VB II

19; TSB 6; YS II 43, III13), five senses, five action-organs and manas. While explaining the viśesa level of differentiation in the gunas¹, VB also mentions these eleven. Though Vyāsa does not use the word it is implied, because he does not mention manas at the aviśesa level either by this name or as an antahkarana. TSB, however, speaks of the five sense-organs and the five action organs only as indrivas. According to this text, manas² is one of the five amśas1 of ākāśa1, while the five senses are the five amśas¹ of vahni and the five action-organs those of **prthivi**. Whether we should consider the total number of karanas to be 15 or 11 or 13 is not clear. They, however, do not regard the indrivas or the antahkaranas to be bodily organs. For these thinkers, they are made up of a subtle stuff and do not die with the body; and for this reason we can call them the constituents of the soul which transmigrates.

indriya-2 इन्द्रिय-२ (YS, VB II 18, III 47), According to Patañjali, dṛśya has two aspects one of which is called bhūta or bhautika and the other indriya² or aindriya. The latter aspect, according to VB, is indriya¹ at the viśeṣa level, asmitā¹ at the aviśeṣa level and vyavasāyātmaka व्यवसायात्मक liṅgamātra at the liṅgamātra level. In YS II 43 and YS III 13 Patañjali and in the 7th verse ANU have used the word indriya for aindriya viśeṣa i.e. indriya¹, which is the immaterial and active part of every living being. In this part of the living being **rajas** is active, sattva predominates and tamas is practically dormant.

indriya-3 इन्द्रिय-३ (YS II 41, 54, 55; TSM 147), the innate tendency to press indriya¹ into service for gaining pleasure. The innate disposition to use an indriya³ in this way is also given the name of that indriya¹. They speak of cakṣurindriya also when they mean a strong impulse to see beautiful things which bring pleasure. A yogī's control over this impulse is called pratyāhāra by Patañjali. It follows upon a complete cessation of citta²-vrttis¹.

indriya-4 इन्द्रिय-४ (ATU 9,10), the nervous sensory apparatus. Here the peripheral sense-organ eye is not meant; most probably the visual centre of the cerebrum is meant (cf. anusandhāna). The peripheral sense-organ, here the eye-is not the instrument of anusandhāna. In mūrtitāraka-yoga, they use indriya in this sense. In amūrtitāraka-yoga they do not. Cooperation of manas¹ is necessary for every activity of indriya for the anusandhāna of mūrtitāraka as well as that of amūrtitāraka.

indriya-5 इन्द्रिय-५ (VB I 7), the physical sense-organ through which the citta² obtains perceptual knowledge. Indriya⁵ in this sense is a part of the body which is destroyed with death and does not transmigrate, while indriyas¹

transmigrate with the transmigrating soul. According to *Patañjali*, the transmigrating soul seems to be made up of **indriyas**¹.

indriya-6 इन्द्रिय-६ (VS V 8), sense-organs. For the understanding of universe, Vasistha classifies universe into five categories. Indriya is one of these categories. The other categories are -(1) enjoyer (bhoktā), (2) object enjoyable (bhogya), (3) enjoyment (bhukti), and (4) the place of enjoyment, i.e. the body (bhogāyatana).

indriyajaya इन्द्रिजय (VB, VBh II 55), control of sense-organs, nonattachment to the objects of senses. Vyāsa enumerates different understandings of indriyajaya by quoting four views. They are as follows: (1) indriyajaya consists in enjoyment of sense-objects not prohibited by śāstras; (2) enjoyment of sense-objects without being slave to them; (3) enjoyment of sense-objects without feeling pain or pleasure; and (4) indriyajaya consisting of the senses due to one-pointedness of the mind. Vyāsa takes indriyajaya in the fourth sense.

indriyasiddhi इन्द्रियसिद्ध (YS, VB, VM II 43), perfection of the sense-organs leading to clairaudience, etc. This is achieved as a result of austerity (tapas). indriyāghāta इन्द्रियाघात (SK 7, 49), indriyavadha, inability of an organ to produce activity. The cause of the inability may be of an anatomical or physiological nature; but the inability itself is

sūkṣma as it pertains to the indriya¹, which itself is sūksma. SK, therefore, places indrivavadhas under his pratyayasarga. Indriyayadhas are eleven of the 28 āsaktis, the other 17 being denial of the 9 tustis and the 8 siddhis (SK 49). In fact, human and animal experiences of inability are so various and so peculiar that it is impossible to classify them. The author's intention seems to be only to illustrate what he calls the pratyayasarga. The abilities and the dispositions alone do not make up the bhāvairadhivāsitalinga भावैरधिवासितलिंग (linga endowed with dispositions, SK 40). Inabilities also are its integral parts. Anaiśvarya अनैश्वर्य (the want of divine faculties) is as important a bhāva as is aiśvarya.

iṣṭa হৃত (BG XVIII 12), desirable, agreeable, a variety of karmaphala. Action performed with the desire yields three-fold fruits depending on its nature. Iṣṭa is one of the karmaphalas. The other two are aniṣṭa and miśra. Iṣṭa is such karmaphala which bestows happiness.

iṣṭadevatā इष्टदेवता(YS II 44), an orthodox Hindu's tutelary god. By virtue of svādhyāya the yogī is said to meet his iṣṭadevatā.

ī - ई

iśvara-1 ईश्वर-१ (YS I 23-24), a puruṣa¹ who is not contaminated by any kleśa or karmavipākāśaya. Probably Patañjali means that while other puruṣas¹ have a beginningless saṃyoga with prakṛti, iśvara has no such connection. Besides, other puruṣas¹ may become like īśvara for a certain length of time, there is no time limit for the aiśvarya of īśvara. Thus īśvara excels every other puruṣa¹, even brahmā, viṣṇu and śiva. Hence there is only one īśvara who is not just a puruṣa¹ among other puruṣas¹. All the same, Patañjali's īśvara¹ is not a creator of the universe.

iśvara-2 ईश्वर-२ (YKU III 22), one among the group of three gods, the other two being *Hiranyagarbha* हिरण्यगर्भ and virāṭ. All these merge into the pratyagātmā प्रत्यगात्मा when brahmajñāna is attained.

iśvara-3 ईश्वर-३ (G 72; GS III 62), the presiding deity of the vāyutattva. According to YCU, however, vāyu² is one of the five mahābhūtas that spring from the parāśakti and iśvara is brahman as the lord of the vāyu² from of prakṛti¹.

iśvara-4 ईश्वर-४ (YSH II 4), an inferior divinity who is omniscient, who has conquered rāga etc., and who is worshipped in all the three worlds.

iśvara-5 ईश्वर-५ (BG XIII 28; BY II 43, IX 61, 62), puruṣa, unaffected by the kleśa and karma and vāsanās. It almost conforms to the definition of iśvara¹ given by Patañjali (YS I 24). The only difference found is that BY does not denote it by the term puruṣa-viśeṣa.

iśvarapūjana-1 ईश्वरपूजन-१ (SAU I (2) 1,6; VUV 13; DU II 1,8), worshipping viṣṇu, śiva or another god with a tranquil mind to the best of one's capacity.

According to SAU, VU and DU, it is one of the ten **niyamas**. According to DU, it consists in three things: there should not be (1) **rāga** etc. in the mind, (2) bitterness, falsehood etc. in speech, and (3) **hiṃsā** etc. in action. (cf. **iśvarapraṇidhāna**).

iśvarapūjana-2 ইংবংদুজন-২ (VS I 58, 59), one among the ten niyamas. It is of two types,-worshipping viṣṇu in accordance with strict scriptural injunctions with devotion and pleasant mood and the another consists in being detached from passions, truthful in speech and devoid of violence.

īśvarapranidhāna ईश्वरप्रणिधान (YSI23, II 32, 45), one of Patañjali's five niyamas and a part of his kriyāyoga. Niyama being a yogānga, īśvarapraṇidhāna is an upāṅga उपांग of yoga¹ and brings success to a $vog\bar{i}$ in his effort to attain samādhi¹. VB calls it devotion par excellence and describes it as detachment. Patañjali (YS II 2) himself speaks of its efficiency in reinforcing the impulse to samādhi1 and weakening the kleśas1. Niyama being a bahiranga of voga, isvarapranidhana should mean acts of devotion with which in all probability Patañjali's pupils were quite familiar. It appears that Patañjali brings in iśvara only because of the inestimable value of iśvarapranidhāna for yoga1; otherwise there is no place for God in Patañjali's philosophy, since his God is not a creator. Nor can his God have a place among common **purusas**¹.

iśvari ईश्वरी (HP III 5), synonym for kundalini.

u - उ

ukāra-1 उकार-१ (GS V 50), monoletter symbol of hari (viṣṇu), a part of the well-known mantra om (cf. 'a'). In GS III 72, however, Gheraṇḍa mentions the letter 'va' व as the mantra of viṣṇu. Perhaps la ल, va च and ha ह are the principal letters of the mantras of brahmā, viṣṇu and śiva, respectively, while a अ, u उ and ma म are the three gods themselves: brahmā is described as akāra अकार, viṣṇu as ukāra, and śiva as makāra varṇaka वर्णक (syllable).

ukāra-2 उकार-१ (DBU 10-13), second syallable of aum, representative of the intermediate region, having *Yajurveda*, viṣṇu and *janārdana* as its deity, of sattvaguna and white in colour.

ugrāsana उग्रासन (SS III 113), paścimatāna with knees kept part.

uccaiḥjapa उच्चै:जप (DU II 15-16), one of the two kinds of vācika वाचिक (of the nature of speech) japa, the other being upāṃśu japa. It is reciting aloud as opposed to low muttering.

ucchvāsa उच्छ्वास (TSB 6), breathing (cf English translation by T.R.S. Iyengar), the function of **prāṇavāyu**. Ordinarily the word **ucchvāsa** is used for exhalation.

ujjāyi उज्जायी (HP II 51-3; YKU I 21, 29;

GS V 46, 67), according to HP and YKU, ujjāyīkumbhaka consists in closing the mouth and slowly inhaling through both nostrils, so that the inspired air touches the lining membrane from the throat down to the chest and a low sound is thus produced, then holding the breath; and in the end, exhalation through the left nostril. This can be done even while the $yog\bar{i}$ is moving or walking and it is said to be a cure for all diseases, particularly throat disease, cough, dropsy and the diseases pertaining to any of the seven dhatus of the body. It increases the heat necessary for the body to live. Swāmī Kuvalayānanda (Prāṇāyāma p. 54) recommends inhalation as well as exhalation through both nostrils without closing any for performing ujjāyī. GS prescribes drawing in air by both nostrils upto the level of the mouth, taking it into the lungs with an action of the throat and the respiratory apparatus below and thereafter moving the air in the mouth and bending the neck for adopting jalandharabandha (locking), stopping respiration so long as one can do it with ease-and then exhaling without constricting the throat. This seems to be the meaning of the two relevant verses. So far a more correct variation in reading has not been found. The text of these verses published in the Adyar edition does not seem to be correct.

uddanakumbhaka उड्डानकुम्भक (GS III

18), uḍḍiyāna during kumbhaka. Performance of uḍḍiyāna during antaḥkumbhaka after assuming the position of mahābandha. This is the technique of mahāvedha.

uddiyāna-1 उड्डियान-१ (YSU I 106-8, V 38, 43; G 32, 35; HP III 6, 55-59; SS IV 72-3; GS III 1, 8, 9; YTU 26, 120; YKU I 41; VU V 6-7), according to G and YSU V 38, uddiyānabandha is performed above the sex organ and below the navel, i.e. between the pubes and the navel. Nothing more is said about it in G except that it conquers death. Conquest of death means possibility of the extension of the span of life. According to HP, SS, YSU (I 108) and GS, however, for uddivana pressure is to be exerted both above and below the navel. If performed with zest, these texts claim for this practice, a rejuvenating effect.

According to YKU, in **uḍḍiyāna**, pressure is exerted right up to the chest and the throat and as the **prāṇa**¹⁻² slowly rises, all the abdominal diseases are cured.

Uḍḍiyāna is a stretching pose. It brings about a locking in the abdominal muscles which Swāmī Kuvalayānanda (Āsana, p.46) prescribes after complete exhalation. Practice of uḍḍiyāna, in its full intensity, after ābhyantara-kumbhaka¹ whets appetite by generating heat in the stomach. It should never be performed empty stomach; and those who want to do it regularly

and successfully should eat small quantities of any kinds of nourishing food.

Uḍḍiyāna should not be performed by those who find it difficult to retain urine or faeces.

uḍḍiyāna-2 उद्दियान-२ (YSU I 175), one of the pīṭhas³ called the mahāpīṭha महापीठ. It is said to be above the ājñācakra.

uddiyāna-3 उड्डियान-३ (YSU V 12), the dhyānasthāna above the ājñācakra. uddiyānaka उड्डिनायक (HP II 45; GS V 49; YKU I 47), pressing in the lower part of the abdomen. According to HP and YKU, it is prescribed at the end of kumbhaka as recaka begins and is obviously to be retained during exhalation and thereafter. Some yogis report that as a result of constant practice this part of the abdomen remains permanently depressed a little and helps prānāyāma and the rising of prana. GS prescribes doing uddivānaka at the end of inhalation as kumbhaka1 begins. Obviously this is to be continued during the cessation of breath.

utkaṭa उत्कट (GS II 4, 27), one of the thirty-two āsanas¹ mentioned by Gheraṇḍa. It consists in sitting on one's heels, which are raised, with the body supported on the toes.

utkrānti उत्क्रान्ति (YS, VB, VM, NGB III 39), levitation, death at will. *Patañjali* refers to utkrānti as a result of mastery over udāna (one of the five important

prāna vāyus). Vyāsa indicates two meanings of Utkrānti - unnayana and utkrāntih prayāņakāle. Since the function of udānavāyu is unnayana or levitation, utkrānti also means levitation. The second meaning as has been explained by Vācaspati, is arcirādi-mārgena bhavati prayānakāle अर्चिरादि-मार्गेण भवति प्रयाणकाले, i.e., during death ascension takes place by the path which has its beginning in the flame (arcimārga अधिमार्ग). Arcimārga has been further explained by Nāgoji as brahmalokagamanāya brahmarandhram bhitvā lingadehasya bahirnihsāranam svecchayā bhavati ब्रह्मलोक-गमनाय ब्रह्मरन्ध्रं भित्वा लिंगदेहस्य बहिर्निःसारणं स्वेच्छया भवति.

This clearly states that after mastery over $\mathbf{ud\bar{a}na}$, the $yog\bar{i}$ who wooes the death can leave the $\mathbf{linga\acute{s}ar\bar{i}ra}$ at his will through the $\mathbf{brahmarandhra}$ to reach the abode of $\mathbf{brahman}$.

uttama उत्तम (BY VIII 9-11), best form of prāṇāyāma on the basis of mātrās. They are: uttama, madhyama and kanīya. The best form of prāṇāyāma consists of thirty-two mātrās.

uttamaprāṇāyāma उत्तमप्राणायाम (TSM 105, 106; HP II 12; GS V 55-6; SAU I (7) 3; G 48-9). For GS it is one of the three grades of sahitakumbhaka¹. Kumbhaka¹ is the technical name given to prāṇāyāma² by many writers on yoga⁴. In the uttama type of prāṇāyāma², according to this text, pūraka¹ is of twenty mātrās¹, kum-

bhaka¹ of eighty and recaka of forty mātrās¹. Superiority in prāṇāyāma² is guaged by three experiences, viz., feeling of warmth, trembling and levitation. According to G, uttamaprāṇāyāma² is characterised by a long duration of cessation of respiration, which is three times that of the adhamaprāṇāyāma². It is said to be of thirty-six mātrās¹. HP and SAU claim for this type of prāṇāyāma the attainment of a condition in which it is easy for prāṇa to rise to the brahmarandhra.

According to TSM, the $yog\bar{i}$ who succeeds in **uttamaprāṇāyāma**² feels as if his body were floating in air. He excretes urine and faeces in small quantities. His senses become acute and his intellect keen. He knows the past, present and future and possesses perfect self-control.

uttamavid उत्तमविद् (BG XIV 14), knower of the best (highest) - mahadādi tattvavidāṃ महदादि तत्त्वविदां - knower of the mahat (the great germ or intellect) and the like principles.

uttara उत्तर = uttaratārakayoga उत्तरतारक्योग (ATU 8, 11), amanaskatārakayoga. In this yoga images are raised by the mind for concentration on them. (cf. pūrva).

uttarāyaṇa उत्तरायण (DU IV 41), transfer of the passage of vāyu⁴ from piṅgalā to iḍā¹ is technically known as uttarā-yaṇa in yogic language. By vāyu⁴ is here meant the prāṇa⁴ which the yogīs raise to their heads.

uttānakūrma उत्तानकूर्म (GS II 5, 33; HP I 24; TSM 42), one of the thirty-two āsanas¹ enumerated by GS. It consists in assuming the kukkuṭa posture, without balancing the body on the arms, but by lying on the back instead, and throwing the arms round the neck.

According to HP, uttānakūrma is one of the fifteen and for TSM one of the sixteen principal āsanas¹ which are also said to be aṅgas by TSM. In these texts, lying on the back is compared with the tortoise.

uttānamaṇḍūka उत्तानमण्डूक (GS II 5, 35), one of the thirty-two āsanas¹ mentioned by GS. It consists in adopting the maṇḍūka pose and holding the head between the elbows.

utthāna उत्थान (VS III 22; TSM 105; DU VI 44), elevation (feeling of). The practice of the uttama (highest kind) prāṇāyāma begets feeling of elevation. In this stage of prāṇāyāma, the sādhaka attains the state of kevalakumbhaka which gives a feeling of elevation of the body.

utpatti-1 उत्पत्ति-१ (SK 69), appearance, coming into existence in some form. It is one of the three things which are to be understood about everything that exists in this sense, the other two being sthiti¹ and pralaya. Things appear, they last for some time and then disappear. By the word bhūta, in this context, Īśvarakṛṣṇa seems to mean the sūkṣma, mātāpitṛja and prabhūta viśeṣas, which in Patañjali's language appear as dharmapariṇāmas, stay as

such for a longer or shorter time and disappear. To be more correct, they should be called **guṇapariṇāma-viśeṣas**. They are not the **mahābhūtas** which VB calls **viśeṣas**.

utpatti-2 उत्पत्ति-२ (ABU 10), creation. In reality, according to this text, there is neither absolute creation nor absolute destruction.

utpattikāraņa उत्पत्तिकारण (VB II 28), generating cause, as citta² is of *vijñānas*. It is mentioned here as one of the nine kinds of causes.

utsarga उत्सर्ग (SK 28), excretion which is the vṛtti of the karmendriya pāyu.

utsāha उत्साह (HP I 16), enthusiasm. One of the six important requisites for the attainment of success in yoga.

udara-1 उदर-१ (GS I 15, 17, 20, 22, V 21), stomach, which is filled with water and air respectively in vārisāra and vātasāra.

udara-2 उदर-२ (GS III 8), abdomen, which is pushed inwards in uḍḍiyāna-bandha.

udara-3 उदर-३ (GS V 70), the inside the chest. This includes the lungs, which can be filled with inspired air.

udāna-1 उदान -1 (ANU 34, 37; DU IV 23, 29, 32; GS V 60; DBU 56, 96; YS III 39; SAU I (4) 12, 13; TSM 77, 81, 85; YCU 22, 24; G 24), one of the five prāṇādi vāyus⁴, the other four being prāṇa¹, apāna¹, vyāna and samāna. According to Suśruta, udāna is concerned with articulation and singing. According to Hindu medical

physiology, it has something to do with maintaining the erect posture of the body.

It appears that the **vāyus**⁴ impel reflex actions, which may also be performed voluntarily; and that they are also the names of the autonomic reflexes impelled by them.

According to Gorakṣapaddhati (34-5), the seat of the udānavāyu⁴ is kaṇṭhamadhya, and according to GS kaṇṭha; but for DU udāna is that one of the ten vāyus⁴ which reside in the two feet and the two hands. The function of udāna is here said to be carrying anything upwards. It counteracts gravity. Vyāsa's name for this function is unnayana¹. According to DBU, the colour of udāna is like that of a conch-shell. Patañjali's ascribing levitation to the conquest of udāna clearly shows that by this word he means the elevation-reflex.

SAU also considers **udāna** to be one of the ten **vāyus**⁴, but it is said by this text to reside in all the joints and its function is said to be reflexly raising the body or any part of it, e.g. raising the foot as soon as one steps on anything that causes pain. ANU supposes this **vāyu**⁴ to have a white colour.

TSM calls by this name one of the five amśas¹ of vāyu⁴, Its kārya¹ and viṣaya are here supposed to be unnayana² and it is supposed to reside in all the joints, even of the hands and feet. Udāna thus may also stand for, or include, reflexly

sending upwards all the humours of the body including the blood.

udāna-2 उदान-२ (VB, VM, VBh III 39; VS II 47, 52; BY II 48, IX 141-2), one of the five principal vayus. The other four being prāṇa, samāna, vyāna and apāna. The sphere of action of this vayu, according to all the quoted commentators on YS, is from the fore-part of the nose upto the brahmarandhra. According to VM and VBh, the main function of udana is raising upwards the chyle etc. which is made of food and drinks. According to VS, the sphere of action of udana is all joints of legs and hands. The action of lifting up of the body is the function of udana. According to BY, the rise of the śabdabrahma in inner body is by udana and before taking meals oblations should be offered to udana alongwith prana etc. udārakleśa उदारक्लेश (VB, II 4). According to VB, an udārakleśa is a kleśa in action, e.g. getting angry, running away, hoarding. It is said by Patañjali to be one of the four forms in which the kleśas exist; though, as explained by VB, an udārakleśa would not be just a disposition, but also an act, or a cittavrtti, prompted by a kleśa. Such a kleśakarma² (YS IV 30) would be absent in the state of dharmameghasamādhi⁵. A kleśa, which is always in a state of nascent excitement, would also be an udārakleśa. It appears that by an udārakleśa, Patañjali means a

kleśa which is always nascently excited

and readily prompts a **kliṣṭa** (painful) **vṛtti** as soon as the situation for it arises. It is in no way held in check.

udāvarta उदावर्त (GS I 46), iliac passion, a disease of the bowels characterised by retention of faeces. Jalavasti is said to cure this disease as also prameha प्रमेह (urinary disease) and krūravāyu.

udgāra उद्गार (TSM 86), belching, which is said to be the sphere of action of the nāgavāyu⁴. It is an involuntary act.

Vomitting is considered to be the function of the nāgavāyu⁴ by TSM. It is an important reflex and is enumerated among one of the vital reflexes by Wenger (cf. Physiological Psychology, p 252).

udghāta उद्घान (VB, VBh II 50), a synonym for kumbhaka state of prāṇāyāma. Though Vyāsa uses six adjectives qualifying udghāta, in fact, there are only three groups: prathamamṛdu; dvitīya-madhya; and tṛtīya-tīvra. VBh understands udghāta as obstruction in the natural flow of breath and there is udghāta throughout the process of prāṇāyāma. Swāmī Kuvalayānanda does not agree with the meaning of udghāta given by Vijñānabhikṣu. (For details see Yoga Mimamsa, VI, 1956, December, PP. 225-257).

unnayana-1 उन्नयन-१ (TSB 6), levity, one of the vāyukāryas¹ and viṣayas³, obviously of the udānāṃśa of vāyu⁴.

unnayana-2 उन्नयन-२ (VB III 39). Here unnayana may mean the stretching

reflex of any vertically situated muscle and may thus cover a number of physiological phenomena, including flow of blood and lymph, upwards. It certainly has to do with counteracting gravity by nervous activity reflexly. cf. udāna.

unmani-1 उन्मनी-१ (MBU II (2) 5; GS VII 17), the state of realization that 'I am brahman'. In MBU this attitude of mind is said to be responsible for the amanaska state of śāmbhavīmudrā and samādhi¹. In Patañjali's language, it would be a khyāti (ātmani आत्मिन ātmakhyāti = vivekakhyāti).

unmanī-2 उन्मनी-२ (NBU 40, 53; SAU I (7) 17; HP IV 39), the state achieved after successful termination of nādā-nusandhāna. It is called manonmanī, samādhi¹, as well as unmanī. In this state the yogī becomes like a dead body. He does not think, does not hear, does not feel. The yogī in this state sees nothing, and though his gaze is fixed it is a vacant gaze (cf. Advayatārako-paniṣad, śāmbhavīmudrā). He ceases to breathe without any effort and, though there is no object of consciousness before him, his mind is fully concentrated and does not waver.

upadraṣṭā ব্যরহা (BG XIII 22), disinterested onlooker. The self (puruṣa) is disinterested onlooker, for without taking part in the activities of body and senses, it witnesses their activities.

uparakta उपरक्त (YS, VB IV 23), coloured (by draṣṭā). Citta which is by nature an unconscious object, acquires the

status or form of subjectivity and objectivity, of knower and known by getting coloured, i.e. coming into relationship with draṣṭā, the conscious principle puruṣa.

uparama उपरम (SK 50, 66), detachment (= indifference), Bāhyatuṣṭi is the result of viṣayoparama विषयोपरम (nonattachment to objects). Uparamati उपरमति, therefore, means: is quite content (= does not go about her business any longer). Prakṛṭi¹ does not operate any longer after kevalajñāna केवलज्ञान (self-realization) is attained, as she has nothing more to do after it. Obviously, prakṛṭi in this context means liṅga¹ with which puruṣa has saṃyoga and which transmigrates so long as there is no kevalajñāna.

uparāga उपराग (VB, VM IV 17), colouring, acquiring the form of. An object colours citta in order to be known. Citta is said to perceive certain object by assuming its form or by being coloured by it.

upalabdhi उपलब्धि (SK 8), knowledge.
Avyakta² is not perceived, not because it is not real; but because it is sūkṣma.
If It did not exist at all, then its kārya¹ too would not exist. But the kārya¹ of avyakta exists. Hence it must be real.
The reason of avyakta² not being perceived is that it is too subtle to be perceptible. It is beyond the reach of buddhīndriyas.

upaṣṭambhaka उपष्टम्भक (SK 13), exciter (= stimulator). Rajas goads prakṛti¹

to action. It is the mover. This however, applies only to perceptible movement. All the **guṇas¹** are in motion, except in their **aliṅga** (**avyakta**) state. But movement is not perceptible when it is too fast or too slow. But 'slow' and 'fast' are relative terms. In fact, there is a slow-fast continuum, of which only the medium range is perceptible.

upasarga उपसर्ग (YS, VB, VM III 37), obstruction, hurdle. Saṃyama on sattvapuruṣa leads to the attainment of intuitive knowledge which works as a hurdle or obstruction for the higher purposes like samādhi. According to VM, a man whose citta is still not under his full control thinks highly of these perfections (intuitive knowledge). But a yogī whose citta is concentrated must avoid these perfection even when achieved.

upastha उपस्थ (TSB 5, 9; SK 26), one of the five amśas¹ of pṛthivi¹ (cf. Upaniṣadbrahmayogī). It is ordinarily known as one of the five karmendriyas. SK calls it a jananendriya जननेन्द्रिय (the reproductive indriya). The vṛtti¹ of this indriya is ānanda². Its kārya is a kind of āharaṇa. Vṛtti¹ is the act of behaving. Kārya¹ the behaviour with results.

upāṃśu (japa) उपांज् (जप) (DU II 14), muttering. It is one of the two kinds of vācikajapa, the other being uccaiḥ. upādāna उपादान (SK 9, 50), material cause. The relation between a thing and

its material cause is that the thing is

made of the material cause. But nothing can be produced unless it is there already. Therefore the effect must be present in its material cause before it actually manifests itself in a form. This is the Sānkhya theory of satkāryavāda. This argument does not seem to be different from the previous one, viz. asadakaraṇāt असदकरणात्. Upādānagrahanāt उपादानग्रहणात is another way of expressing the same truth. The same matter takes different forms. One of the tustis is called upādāna probably because it is remaining content with a means (= cause) of getting insight into the pradhanapurusantaram (difference between purusa and prakrti) sūksmam without attaining the jñāna itself. Upādāna here means "means". upādhi उपाधि (G 88-90; TBU I 7), one of the two objects of dhyāna, the other being $tattva^2$. If a $yog\bar{i}$ tries to see the tattva² (ultimate object of knowledge) in any of the nine dhyanasthanas inside his body and continues for some time to think of it there, he gets the animādi powers (= abilities). While tattva² has no form, upādhis are only forms; and the knowledge of the one is quite different from the realisation of the other. The realisation of the tattva² destroys all upādhis. It is state of existence and not mere knowledge. Here Sānkhya, voga⁴ and Vedānta agree. Patañjali's aindriya viśesas, which transmigrate, as well as the mahābhūtas are all upādhis in this sense. **Citiśakti** is different from transmigrating souls as well as from the five **mahābhūtas**.

upāyapratyaya उपायप्रत्यय (VB, VM I 20), means of experience or conditions of obtaining experience (of anya region). They are śraddhā, vīrya, smṛti, samādhi and prajñā.

upekṣaka उपेक्षक (SK 66), indifferent (= detached). According to SK, after the pradhānapuruṣāntara (difference between puruṣa and prakṛti) is seen the puruṣa² becomes contented and detached. His attitude is "I have seen. Now there is nothing more to see".

upekṣā उपेक्षा-१ (YS I 33; YSH IV 121), the attitude of being unconcerned. It is one of the four attitudes towards different actions and feelings of others which Patañjali prescribes for cittaprasādana. This is the attitude to be adopted towards all evil actions. This contributes to the yogī's peace of mind. YSH calls it, mādhyasthyam माध्यस्थ्यम् (=arāgadveṣavṛttibhāva अरागद्वेषवृत्तिभाव= rāgadveṣayorantarālam रागद्वेषव्योरन्तरालम्).

upekṣā-2 उपेक्षा-२ (VB, VM I 33), indifference. It is one of the four mental attitudes (maitrī, karuṇā etc.) for the attainment of cittaprasādana. It suggests one to cultivate an attitude of indifference towards vicious (apuṇya) people. According to VM, upekṣā is taking of the middle path and avoiding the extremes.

uṣṭraniṣadana उष्ट्रनिषदन (VB II 46), one of the examples of āsana¹, given by

Vyāsa. Only ten examples are given by him. No **āsana**² has been described.

uṣṭra (āsana) उष्ट्र (आसन)(GS II 6, 41), one of the thirty-two āsanas mentioned by *Gheraṇḍa*. It consists in lying prone with folded legs placed crosswise towards the back and held with opposite hands. With this body position, one has to contract ones abdomen vigorously, raise head and contract the mouth.

ਹ - ਤ

ūrumadhya ऊरुमध्य (VS III 67), middle of the thigh. A vital point (marmasthāna) nine fingers above the knee.

ūrdhva ক্রম্ল (SK 44, 54), one of the two ends in the scale of living beings, the other being adhaḥ. The ūrdhva (upper) end is brahma, the adhaḥ stamba (cluster). Dharma is the bhāva which leads a sūkṣmaviśeṣa (= liṅga¹) towards the ūrdhva end.

ūrdhvamūla ऊर्ध्वमूल (BG XV 1), having transcendental (reality) as the root cause or having the highest (reality) as the cause. The world is imagined to be a tree having its root above or having the highest reality **brahman** as its cause.

urdhvaretas ऊध्वरेतस् (VB III 26; VS 14, 34, 50), persons who utilise their inner energy for higher, i.e., spiritual cause are called urdhvaretas. According to Vasiṣṭha, urdhvaretas has been used as synonym for Lord Śiva, which means, 'the one who has developed ones inner-energy by conquering kāma'.

ūrdhvākuñcana ऊर्ध्वाकुंचन (YSU I 83-4, 104), one of the three bandhas⁵ mentioned in the *Upaniṣad*. It consists in pressing the rectum with the heel and contracting the anus with force. By repeatedly performing this bandha⁵, prāṇa² rises to the head. Mūlabandha, which is another name for this bandha⁵, brings about the union of prāṇa¹ and apāna¹ and of nāda and bindu which are essential for abhyāsayoga.

uha ক্তর (SK 51), spirit of investigation (research). It is one of the eight extraordinary accomplishments (siddhis³).

r - ऋ

rjukāya ऋज्काय (GS II 13; HP I 19), erect body position. Rju here means erectness without any stiffness and tension. Kava, though generally means body or trunk, here it refers to spine, for the erectness of the body depends upon the relative erectness of spine. However, the spine naturally has two curves and erectness here referred to does not mean removing these curves and thus making the spine straight but it means introducing no further new bends either forward, backward, or lateral (see Asana by Swāmī Kuvalayānanda, pp. 128-30). Though rjukāya is essential for svastikāsana it is equally essential for other meditative postures too.

rtambharaprajña ऋतम्भरप्रज्ञ (VB III 51), a $yog\bar{i}$ at the second of the four stages of progress in yoga is one whose

samādhiprajñā is rtambharā. Rtambharāprajñā is the samādhiprajñā of nirvicārāsamāpatti which shows to the yogī the truth of anything on which he performs saṃyama. Rtambharaprajña yogīs perform saṃyama whenever they seek the truth about anything which cannot be known otherwise.

e - ए

ekacittatantra एकचित्ततन्त्र (YS, VB, VM IV 16), (object) depending (for its existence) upon someone's cognition. Patañjali holds that a thing does not depend for its existence on particular mind's cognition, for when that mind is not perceiving it, then we will have to say that it does not exist. According to Patañjali's metaphysics, both the experiencer and the experienced have independent real existence and the latter does not depend on the former's cognition for its existence.

ekatattvābhyāsa एकतत्त्वाभ्यास (YS I 32), dhyāna. Vācaspati Miśra particularises it as the dhyāna of īśvara. Patañjali has prescribed repetition of the praṇava, which denotes īśvara and meditation on īśvara for getting rid of the antarāyas which are the cittavikṣepas. The meaning is that one need not be disturbed by the antarāyas, but should persist in what one considers to be the right abhyāsa.

ekatānatā एकतानता (YS III 2), singleness, being one and only one. If the content of consciousness is reduced to a single object for any length of time, then the state of mind at that time is called **dhyāna** by *Patañjali*. That one object may, however, be a blend of more than one constituents, e.g., a light and a sound.

ekatra एकच्च (YS III 4), with respect to the same object. Dhāraṇa of an object imperceptibly develops into the dhyāna of that object and the latter into samādhi¹ on it. In saṃyama emphasis is on the sameness of the object. Samādhi¹, as such, is a state of the mind irrespective of what the object is, or whether there is an object or not. Samādhi¹ with reference to its content is called saṃyama on that object. A dhāraṇā imperceptibly develops into the dhyāna.

ekadaṇḍī एकदण्डी (SSP VI 39), one who has subdued or controlled the citta.

ekabhavika एकभविक (VB, VM II 13), unigenital, i.e. causing one birth only. The vehicle of action (karmāśaya) is termed ekabhavika because its manifestation is limited to one birth only. It is one of the attributes of karmāśaya.

ekastha एकस्थ (BG XIII 30), resting in the one. The manifoldness or diversity of beings is rested in the one **brahman**.

ekākṣara एकाक्षर (VS III 9, 45), praṇava (cf. varṇatraya). At time it is also called *praṇavākṣara*.

ekāgra एकाग्र (VB I 1), one of the five cittabhūmis, the other four being kṣipta, mūḍha, vikṣipta and niruddha. It is the state of mind in which

ideas do not go on changing incessantly but one persists for a length of time, either a single simple idea occupying the entire field of consciousness exclusively, or one idea persisting in the centre while others are changing in the margin of the field. According to VB, samādhi¹ in the ekāgra state of mind reveals the truth of everything, attenuates the kleśas¹, lessens the bonds of karma and paves the way to nirodha. Hence it is yoga; while samādhi1 in the kṣipta, vikṣipta and mūdha states is not. Perhaps Vyāsa means that samādhi¹ is an anāgata (in a potential form) dharma of citta¹ in these states and not a vartamana dharma, and hence it is not yoga4.

ekāgratā एकाग्रता (YS III 11), persistence for an appreciable length of time of one single idea in the mind. According to *Patañjali*, singleness of idea characterises dhyāna and its persistence in the mind ekāgratāpariņāma.

ekāgratāpariṇāma एकाग्रतापरिणाम (YS III 12), the avasthāpariṇāma of niruddhacitta. It is the technical name given by Patañjali to the state in which the content of consciousness remains exactly the same at two successive instants. Although saṃyama involves all the three-dhāraṇā, dhyāna and samādhi, in this process we fail to distinguish the one from the other.

ekātmikāsaṃvit एकात्मिकासंवित् (VB I 17), asmitā. It is *Patañjali's* definition of the kleśa¹ asmitā. According to this, the kleśa¹ asmitā is an innate tendency of the citta¹ which prevents it from distinguishing between itself and puruṣa¹. By virtue of this inborn psychological disposition the citta² knows no entity other than (and in anyway superior to) itself.

ekānta एकान्त (GS III 37), unity of principle behind the manifold universe. For yonimudrā the yogī has to realise that there is one and only one Reality and that he and that principle of which kuṇḍalī is the śakti, are one. Obviously, he means brahman (= Ātman). The yogī has to take it that he too is the brahman, since there are no two realities in the world.

ekāhāra एकाहार (GS V 31), eating once a day. Ekāhāra is prohibited for a yoga-sādhaka.

ekāṃśa एকাস (BG X 42), one part. God has pervaded this world by one fragment of himself. 'He' stands firmly sustaining the world by one part, by one limb, with one foot. So says the *Veda:* pādosya viśvā bhūtāni... (Taittirīya Āraṇyaka III 12).

ekendriyasaṃjñā एकेन्द्रियसंज्ञा (VM, VBh I 15), third in the succession of four kinds of vairāgya. The consciousness of a single sense. In this stage of vairāgya the consciousness becomes incapable of turning towards objects and matured taints persist only in manas and that also only for curiosity's sake (autsukya mātrā). According to VBh, even after achieving detachment

from sensuous objects, when the attachment remains only on **manas** level it is called **ekendriya**.

ai - ऐ

aikāgrya ऐकाग्रय (YS, VB, VM II 41), onepointedness, due to absence of distraction. From purification (śauca) come one-pointedness in succession. i.e., after predominance of sattva and thereby saumanasya and which leads to sense-control and thence fitness to perceive the true nature of ātman.

aindri ऐन्द्री (NBU 10), the sixth mātrā of dvādaśamātraka (twelve mātraka) praṇava. One who leaves this mortal body during this sixth mātrā of praṇava, attains oneness with Indra (the king of Gods).

aiśvarya ऐश्वर्य (SK 23), ability (= capability = greatness). It is one of the eight bhāvas², the other seven being dharma, adharma, jñāna, ajñāna (ignorance), rāga, vairāgya and anaiśvarya (inability). Aiśvarya naturally leads to success (SK 45). Hence the relation between aiśvarya and avighāta is called nimittanaimittika relation by Gauḍapāda. The aṇimā etc. eight siddhis³ are called the eight aiśvaryas by Vyāsa (VB III 45), not by Īśvarakrsna.

0 - ओ

om-1 ओम्-१ = oṃkāra ओंकार = aum अउम् (DBU 9, 14, 19-20,; YCU 71, 80; ANU 2, 20), brahman. pṛthivī, agni, Ṣgveda, bhūḥ भू: and pitāmaha पितामह (brahman) are said to be in the akāra अकार of om²; antarikṣa अन्तरिक्ष, Yajurveda, bhūvaḥ भुवः (the earth), viṣṇu, in the u = ukāra and bhuvaḥ, sūrya³, Sāmaveda, svaḥ (heaven) and maheśvara (śiva) in the makāra. This is how the whole universe is in brahman.

Om is often said to be the ekākṣara एकाक्षर (one-lettered) brahman. It is a practice of ancient Hindu writers to call the result obtained by a technique by the name of the technique. Nāda and om² are thus called brahman, obvisiously because brahman is attainable by nādayoga and mantrayoga. For the same reason haṃsa is also a name of brahman.

om-2 ओम्-२ (YS I 27-8), the name of iśvara. For iśvarapraṇidhāna, om² is to be repeated and its inner significance to be dwelt upon, the inner significance being iśvara.

ka - क

kaṇṭha कण्ठ (G 36, 62, 70; KU 11, 15), throat. It extends from the back end of the upper palate (tālumūla) down to the top of the oesophagus. Viśuddha is its lower part. Candra has its seat in its upper part. For adopting jālandharabandha it is the lowest part which is to be contracted. The seat of candra is however said to be tālumūla in G 86. Thus G 56 and 86 do not agree as to the situation of candra. According to KU, after piercing the hṛdaya (heart) the suṣumnānāḍī² reaches the kaṇṭha which is to be filled with prāna¹ rising

upwards. Here $susumn\bar{a}$ and kantha are both called $n\bar{a}d\bar{i}s^2$.

kaṇṭhakūpa-1 কতকুঘ-१ (YS III 30), a part of the body below the throat by performing saṃyama on which the yogī does not feel hungry or thirsty. Kaṇṭhakūpa might be a word for that part of the gullet which is the seat of thirst cells.

kaṇṭhakūpa-2 কতকুप-२ (VS III 63, 70), cavity below the throat (jugular notch). Twelfth among the eighteen marmasthānas (vita points) which is situated six fingers above the middle of the heart.

kaṇṭhacakra কণ্ডবর্ক (SSP II 5), fifth cakra in the series of nine cakras enumerated by SSP. This is of four fingers length. Iḍā and piṅgalā are situated in the right and left sides of the cakra. This has been recognised as viśuddhacakra and located in the throat region.

kanthamudrā कण्डमुद्रा (YTU 26, 116, 119), jālandharabandha. It is one of the twenty members of hathayoga⁴, according to this text. It consists in contraction of the throat by bending the chin and fixing it firmly on the chest. It is here described as a part of mahāvedha.

katthana কম্বন (YTU 30), boasting. It is one of the six **vighnas** which every *yogī* has to overcome before he can make any progress in **yoga**⁴ (cf. **ālasya**). The *yogī* is advised not to talk about his **yoga**⁴ to anybody.

kadaśana कदशन (HP I 31, 60; GS II 30),

unwholesome food. Yoga practitioner should not consume unwholesome food. (cf. pathya and apathya). Even the wholesome food, if heated over again or is dry or excessively salty or sour becomes unwholesome or kadaśana. However, even if unwholesome food is consumed, the adverse effects of it can be counteracted through mayūrāsana. (Cf. HP I 31).

kanthaḍi কন্থান্ত (HP I 6), one of the siddhayogīs having the nomenclature of indefinite identity.

kanda-1 कन्द-१ (G 15, 16, 30), a bulb shaped structure (presumably nervous) situated above the pubes and below the navel. The suṣumnānāḍi² passes through it as a cord passes through a perforated bead. The spot where suṣumnā pierces the kanda is the maṇipūrakacakra¹. Below it is the kandayoni, so called because of its being the matrix from which the nerves are supposed to arise. It is compared in shape to the egg of a bird. Above the kanda resides the kundalinīśakti.

kanda-2 कन्द-२ (VS II 2, 11; HP III 103, 109, 110), resembling bulbous root hence called kanda, originating point of all the seventy-two thousand nāḍīs, oval-shaped, osseous covered by skin and said to be situated in the body nine fingers above the dehamadhya. It is of four fingers height and breadth and whose middle point is known as nābhi. HP also considers it to be merely fleshy or osseous. According to HP, it is white

in colour. Its location seems to be near **nābhi** since it is twelve fingers above **mūlasthāna**.

kandamadhya कन्दमध्य (VS II 19, 25), centre of the kanda. The nāḍī which is at the centre of kanda is identified as suṣumnānāḍī.

kandayoni कन्दयोनि (YCU 14, 15; G 16), place of the origin of the seventy-two thousand nāḍīs.

kandasthāna कन्दस्थान (TSM 58, 68, 70), the middle portion of the body. In human beings it is said to be $6\frac{3}{4} \times 3 \times 3$ inches in dimension. In animals, birds and reptiles it is of the shape of an egg. Nābhi is said to be situated inside the kanda. This does not agree with the description of kanda given by other writers like Gorakṣa. It appears that. kandasthāna of TSM is the nābhikanda. (Most probably they are the nerve plexuses situated at the navel region of the perineum).

kanīya कनीय (BY VIII 9-11), prāṇāyāma of the lowest type. BY recognises three forms of prāṇāyāma on the basis of mātrās; they are, uttama, madhyama and kanīya. Prāṇāyāma of the lowest type consists of twelve mātrās.

kanīyas कनीयस् (HP II 12), of low degree, the primary stage of kumbhaka. Kanīyas stage of kumbhaka causes perspiration (cf. madhyama¹ and uttama¹).

kapālakuhara कपालकुहर (G 34), an aperture in the roof of the mouth near the

root of the tongue. **Khecarī** consists in the turning the tongue backwards, letting its tip enter this centre and fixing the gaze between the eyebrows below them.

kapālabhāti-1 कपालभाति-१ = bhālabhāti भालभाति (GS I 12), one of the six ṣaṭkarmas, the other five being dhauti, vasti, neti, laulikī and trāṭaka. It is of three kinds vātakrama, vyutkrama, and sītkrama. It corrects all abnormalities of kapha.

kapālabhāti-2 कपालभाति-२ (HP II 36), quick exhalation and inhalation in the fashion of the ironsmith's bellows. Thus, air is expelled by a stroke of the abdominal wall backward and then automatically inhaled. This is described as a part of bhastrikā prāṇāyāma² and is said to cure all diseases of kapha.

kapālavaktra कपालवका = kapālarandhra कपालरन्ध्र = bhālarandhra भालरन्ध्र (GS I 25, 33), kapāla is the part of the inside of the head above the level of the mouth. Kapālavaktra is, therefore, the passage (inside) between this part and the mouth. Reaching there the tongue tastes the different tastes from salt to sweet. One of the dantadhautis consists in cleansing this part with the right thumb. It is the kapālarandhra dantadhauti.

kapālavaktrasaṃyoga कपालवक्त्रसंयोग (GS III 26), contact (of the tongue) with the opening of the skull. As a result of the practice of khecarī, the tongue is elongated so as to touch the opening of the skull and this is called kapālavaktrasaṃyoga, Various types of juices are tasted through the tongue as a result of this contact.

kapālaśodhana-1 कपालशोधन-१ (SAUI (7) 13-1), freedom of the head from all impediments to the rising of **prāṇa**⁴ up there. The process described is the same as **nāḍīśuddhi** without which **prāṇa**¹ would not rise.

kapālaśodhana-2 कपालशोधन-२ (HP II 31, 50), cleansing of frontal sinuses. The practice of **netikriyā** as well as the practice of **sūryabhedana kumbhaka** both independently result into cleansing of frontal sinuses.

kapha-1 毒味- (GS I 29, 34, 38, 41, 54, 59, 56, V 66, 69; VB III 29), the humour called phlegm. The three humours of the body, viz., kapha, vāta and pitta, are taken for granted by *Gheraṇḍa* but never defined or described. Most of the saṭkarmas and the ujjāyī and śītalī kumbhakas are said to cure the diseases arising from the malfunctioning of kapha (called kaphadoṣa). Expert Āyurvedic opinion today does not, however identify vāta, pitta or kapha with any of the humours of the Greeks.

kapha-2 कफ-२ (GS I 38), mucus which is thrown out by performing daṇḍa-dhauti.

kaphakoṣṭha कफकोछ (HP V 13), region of kapha (possibly humour) in the body. HP describes the regions of each humour in the human body. The parts of the body above the region of the chest is called **kaphakoṣṭha**. When the **vāyu** accumulates in the **kaphakoṣṭha** it causes imbalance of humour in the human body and also it causes functional diseases like asthma, hiccup and headache. The treatment of such diseases is suggested in HP (V 14, 15). **kaphadoṣaviśoṣaṇī** कफदोषविशोषणी (HP II 36), destroyer of disorders caused by

II 36), destroyer of disorders caused by phlegm. **Kapālabhāti**, one of the six cleansing processes has been described as destroyer of twenty different diseases caused by phlegm (taduktaṃ nidāne-kapharogāśca viṃśati). (cf. Brahmānanda on HP II 36).

kaphādyargala कफाद्यर्गल (HP II 66), impediments in the form of kapha etc. (settled at the mouth of brahmanāḍi).
As a result of the practice of bhastrikā kumbhaka, the obstruction in the form of kapha etc. is removed from the mouth of brahmanāḍi.

kamalāsana कमलासन (HP I 44, 47-9; G 7, 9, 41, 43; GS II 8; YCU 3, 40, 106), baddhapadmāsana-one of the two āsana which, according to G and YCU, excel all the other āsanas¹, the other being siddhāsana. The right foot is placed on the left thigh and the left foot on the right thigh. Both arms are taken round the back and the big toe of the right foot is firmly held by the right hand and that of the left foot by the left hand. (If the toes are not grasped by the hands, which may be placed on the knees or in front of the pubes, the posture is ordinarily called padmā-

sana). Besides, the chin is firmly placed on the chest (jālandharabandha) and nāsāgradṛṣti is adopted.

kampa कम्प (HP II 12; TSM 105; DU VI 43), tremor. The prāṇāyāma of intermediate degree (cf. madhyama) causes kampa in the body. Since the practice of prāṇāyāma generates heat in the body, which is not accustomed to such heat, first starts sweating and then tremor in the body results. But when the body becomes perfectly conditioned in the prāṇāyāmic breathing, the sādhaka attains a blissful condition.

karaṇa-1 करण-१ (SK 9; G 58), behaviour = acting = bringing about. Behaviour of each person is according to his or her own psychophysical makeup and that which is not related to the individual's constitution in this way cannot be brought about under any circumstance.

G uses this word for yogic practice. A $yog\bar{i}$ has to learn that yogic feat by which he may retain and absorb the piyūşa (nectar) which oozes from candra³ and flows down to the sūrya². Obviously, reference is to viparītakarani, mentioned in the next verse in which the āsanas1 known as viparītakarani, sarvānga and śirṣa are prescribed; but perhaps another more important feat is implied, which does not consist only in preventing the pīyūṣa पीयृष (nectar) from down to the sūrya2 by adopting a topsy-turvy pose, but in holding it and carrying it upwards by the currents of prāna² and apāna¹. karaṇa-2 करण-२ (TSM 116), bodily sense-organs. Three of these can be closed by fingers, viz. eyes, ears and nose. karaṇa-3 करण-३ (SK 18, 29, 31, 32, 35, 43, 47), all the organs which have to do with knowing, feeling or willing. Karaṇas are the components of liṅga¹, which is supposed to be made up of them. Karaṇas are not organs of the body, though liṅga¹ lives in and works through them.

Liṅga¹ may in this sense be called **kāraṇa śarīra**. Activity of **karaṇas** is spontaneous as if they were satisfying a natural impulse. *Īśvarakṛṣṇa* is a psychological determinist and not an exponent of freewill.

At the same time his philosophy is teleological, not purely mechanical. According to him, prakṛti¹ works in such a way that puruṣa² may be in a position to bring apavarga to puruṣa¹. According to him, there are thirteen karaṇas, three of which are antaḥ-karaṇas, and ten bāhyakaraṇas. But since besides the three antaḥkaraṇas, there are eleven indriyas, the number of karaṇas should be fourteen; or the manas indriya would be a karaṇa. It would be an antarendriya अन्तरेन्द्रिय (internal indriya).

karaṇa-4 करण-४ (BG XVIII 18), organs.
They are of two types. External organ such as ear etc. and the internal organ such as intellect etc.

karuṇā करुणा (YS I 33; YSH IV 117), sympathy which is one of the four attitudes, adoption of which $Pata \tilde{n} jali$ prescribes for **cittaprasādana**. It is the $yog \tilde{i}$'s attitude towards a suffering creature. In $V\bar{a} caspati$ $Mi \acute{s} ra's$ language, by cultivating **karuņā** the $yog \tilde{i}$ gets rid of all inclination to harm others in anyway.

Karuṇā is described by Hemacandra, a Jain writer, as an unselfish desire to remove the duḥkha of the duḥkḥita दु:चित (suffering living being). Anukampā अनुकम्पा (compassion) towards one's own son, etc. should be selfless. Impartial anukampā would even be experienced towards a tiger.

Patañjali describes karuṇā as an attitude towards those who are in trouble. Obviously it is the same as desire to remove duḥkha. Anukampā consists in causing sukha as well as in removing duḥkha.

karma-1 कर्म-१ (GS V 81; G 75), action. In GS śarīra is said to be karma rūpaka रूपक (that which is seen as working), i.e. the organ of action. Hence the importance of ghaṭa or ghaṭasthayoga which has to do with the body. Since dhāraṇā implies cessation of bodily activities for two hours, karma in G 75 includes only karmendriyavṛtti and not sāmānyakaraṇavṛtti.

karma-2 कर्म-२ (G 98; GS I 6, 7; YS IV 7, 30), dharmādharma (merits and demerits). The dharmameghasamādhistha yogī is not subject to the law of karmaphala laid down by Patañjali (YS II 14). But no one can escape the law of

karmavipāka. According to Samayasāra समयसार (a Jaina book), both good and bad (śubhāśubha श्भाश्भ) karmas bind the $\overline{A}tm\overline{a}$. For GS also karma is action of which man has to reap the fruit. Our past karmas are said to be the cause of our present lot. The kind of body which get is determined by our own karmas. Present karmas give a $yog\bar{i}$ that body after death which suits his karmavipāka. Thus the vicious circle: from good or bad actions body and from body good and bad actions. The cycle of life and death is also governed by one's own karmas. According to Patañjali, karmas may be śukla, krsna or aśuklākrsna.

karma-3 कर्म-३ (KU 23; VU I 12; VB II
1). karmāśaya. The karmavipākāśayas are mostly responsible for lifeactivities while kleśas are responsible
for all the behavior of men and animals.
Yoga¹, however, can make these ineffective. The perfectly ineffective kleśas
are called dagdhabīja (of extinguished
potentialities) by VB.

According to VU, prārabdha प्रारं ह्य (already begun) karmāśayas are those which have already begun their work and are thus responsible for the present vṛttīs. Āgāmī आगामी (inactive) ones are those which will be active in future. They are so deeply buried that they play no part in determining the present vṛttis. Arjita अजित (acquired) once are the karmāśayas acquired recently. They work themselves out first. I 1), bonds of action. The one pointedness of the mind leads to the
slackening of the bonds of action. The
action has been further defined by VBh
as the binding cause of the **budhhi** and **puruṣa** in the form of merit and demerit
(dharma-adharma).

karmayoga-1 कर्मयोग-१ (TSM 23-4, 26). It is the yoga which consists in performing the actions prescribed by the authorities. A karmayogī is, therefore, the person who always does his duty (i.e., a morally good man).

karmayoga-2 कर्मयोग-२ (BG V 2, XIII 24), yoga attained through karma, i.e. performance of action without attachment (towards the fruit) and with faith in Lord.

karmasanga कर्मसंग (BG XIV 7), attachment to the fruits of action. One of the characterisitics of rajoguna. It causes bondage to the embodied soul and produces visible and invisible results as its consequences.

karmasaṃnyāsa कर्मसंन्यास (BG V 2), renunciation of action. Lord kṛṣṇa says that renunciation of action and performance of action both are capable of leading one to the highest goal, i.e. liberation. Yoga through action is esteemed more than the mere renunciation of action unaccompanied by knowledge.

karmāśaya कर्माशय = karmavipākāśaya कर्मविपाकाशय (YS I 24, II 12), the abiding after-effects left behind by every behavior, including consciousness. They remain in the **citta¹** in the form of **saṃskāras** and determine subsequent behavior and consciousness, their specific effects being called their **vipāka**.

karmendriya कर्मेन्द्रिय (TSB 6; SK 26), according to TSB, the five amśas of prthivi. Their visayas4 are vacana, ādāna, gamana, visarjana विसर्जन (evacuation) and **ānanda**. These imply samikarana, unnayana, grahana, śrapana and ucchvāsa, which are prāna-visayas. SK clearly mentions karmendriya as one of the two kinds of indriva, the other being inanendriva (buddhindriva). Both together make up the bahyakarana. The karmendriyas are vāk, pāni, pāda, pāyu and upastha. For SK indrivas are not physiological organs of a living body, nor other anatomical structures. A karmendriva is that indriva in the transmigrating soul which is responsible for movement. It is a part of the essence of the living being. It is a kind of ability, no doubt, but it is much more. It includes the tendency to behave in a particular way under particular circumstances.

kalalādi कललादि (SK 43), that which a liṅga has for its āśraya. It is the mātāpitrja viśeṣa and the active principle of the generative cells, which is not perceptible like a sthūla viśeṣa, but is known to the scientists.

kalā-1 कला-१ (HP IV 1), epithet of **śiva**. Here **śiva** has been ascribed as having the nature of kalā. Kalā has been identified as rich sensation felt all over the body. The experiences of nāda, bindu and kalā in the practitioner are supposed to be the development of the activity of prāṇa and the Almighty being the Lord and source of all activity is said to be of the nature of nāda, bindu and kalā.

kalā-2 कला-२ (HP III 32, 36), tongue. During khecarī, kalā (the tongue) is to be lengthened to such an extent that it could touch the middle of the eyebrows so that it could be inserted into the nasopharyngeal cavity.

kalpitā कल्पिता (YSU I 151), desired (=sought for). There are two kinds of siddhis. Some are desired and sought for. They can be acquired by rasa auśadhi (medicine), kriyā, mantra etc. They are temporary. Others are permanent. They come of their own accord to those who are vāsanārahita (devoid of vāsanā) and practise voga4 for its own sake for a long time. A vāsanārahitayogi is not a yogārūdha (seated on **voga**) of the $G\bar{i}t\bar{a}$. He is still on his way to vivekakhvāti. But he gets the siddhis³ like svātantrya स्वातन्त्र्य (freedom), which are in the language Upanisad *İśvarapriya* this (acceptable to god). They come in the natural course of advancement. These are akalpitā.

kavi কবি (G 64), a sage (wise man). This word means omniscient too, but as the practice of **jihvābandha** and concen-

tration on sarasvati for six months does not obviously bring sarvajñātrtva মর্বরান্ত্র্ল (omniscience). The first meaning is appropriate here. A third meaning of the word, viz. poet, also appears to be inappropriate in this context.

kākacaṇḍīśvara কাক্রব্যন্তরিকাং (HP I 7), one of the **siddhayogīs** having the nomenclature of indefinite identity but enumerated by *Svātmārāma* as a token of Salutation.

kākī काकी (GS I 21; III 3, 66), one of the five animal-shaped mudrās, the other four being aśvinī, māṇḍūkī, mātaṅgī, and bhujaṅginī. It consists in assuming the shape of a crow's beak by appropriately contracting the lips and drawing in air slowly through the mouth. The crow is somehow supposed to be free from all diseases. So the yogī who practises this mudrā remains free from all diseases. For bahiṣkṛtadhauti the yogī is advised to fill the stomach with air by means of kākīmudrā.

When air is inhaled through the mouth it does not go into the stomach but into the lungs. For filling the stomach with air one has to inhale and then swallow.

kānerī कानेरी (HP I 7), name of a siddhayogī of an unidentified nomenclature. Svātmārāma enumerates his name besides many other such yogīs in order to express his salutations for him.

kāpālika-1 कापालिक-१ (HP I 8), one of the siddhayogīs whose identity is indefinite but enumerated by Svātmārāma as a token of salutation.

kāpālika-2 कापालिक-२ (SSP VI 46), a variety of the devotees of śiva. One who considers the knowledge of self and of sacred syllables with the attitude of mind that 'śiva is the Supreme Reality' is called kāpālika.

kāma-1 काम-१ (TBU I 12), desire. The yogī who has realised the brahman has one and only one bhāva; i.e., ahamasmi-brahma अहमस्मि बहा (I am brahman). All the other bhāvas including kāma, are perfectly foreign to him.

kāma-2 काम-२ (MBU I (2) 1), one of the five dehadoṣas, the other four being krodha, niḥśvāsa, bhaya and nidrā. It is an impulse and behaviour brought about by our very constitution, and as a doṣa, it is aggravated or ameliorated by bodily conditions. Though physiological in origin, it can be counteracted by mental treatment. The approach is psychosomatic and the treatment here prescribed niḥṣaṅkalpatā नि:संकल्पता is the absence of desire of all kinds (= detachment). They believed that by the practice of detachment kāma is automatically brought under control.

kāmarūpa कामरूप (G 10, 11; YSU I 171; DBU 44; YCU 7), the spot between the ādhāra and the svādhiṣṭhāna cakras. The pressure of the left heel on this spot occupies an important place in the yoga⁴ taught by Gorakṣa. It is prescribed for mahāmudrā as well as for mūlabandha and also for siddhāsana. Yoni is said to be situated inside the

ādhāra. Perhaps it projects upwards into it and is therefore, sometimes described as situated between ādhāra and svādhiṣṭhāna. According to YSU, it is one of the four pīṭhas; YSU, DBU and YCU call it yonisthāna.

kāmasaṅkalpa कामसंकल्प (ABU 1), entertaining desires. An aśuddha अशुद्ध (impure) manas entertains desires.

kāmākhyāyoni कामाख्यायोनि = kāmayoni कामयोनि (G 11-12), an ovary-like organ situated inside the mūlādhāra (= ādhāra). If the ādhāra is a lotus flower, then the kāmayoni is its ovary. This organ is respected by the yogīs, because they start haṭhayoga by stimulating the yonisthāna by pressing it with the heel of their foot. Inside the kāmayoni is the mahālinga. Yonisthāna is situated between ādhāra and svādhiṣṭhāna.

kāmāvasāyitva कामावसायित्व (VB III 45), determining the things according to desire. One of the eight siddhis enumerated by Vyāsa. However, this siddhi does not bestow the power of being capable of reversal of natural things because it may go against the will of the Maker. VM further adds that a person having this siddhi can change the effect of poison into nectar but he cannot change the moon into sun and so on.

kāyakleśavidhi कायक्लेशविधि (HP I 61), action that cause discomfort to the body. Such vidhis (actions) are to be cautiously avoided by a yoga practitioner.

kāyarūpa कायरूप (YS III 21), rays of light reflected by the body. If a *yogī* performs **saṃyama** on these, they are no longer reflected by his body and the *yogī* becomes invisible.

kāyavyūha कायव्यूह (YS III 29), physiological and anatomical systems of the body, all of which the *yogī* comes to know if he succeeds in **saṃyama** on the **nābhicakra**.

kāyasampat कायसम्पत् (YS III 45-6), charm (= lustre), strength and adamantine build of the body, which are acquired by the conquest of matter by performing saṃyama on the various material forms of prakrti.

kāyasiddhi कायसिद्धि (YS II 43), aṇimā, laghimā (becoming extremely light), mahimā (the power of increasing size at will), prāpti (reaching everywhere), prākāmya, vaśitva (acquiring control over others), and īśitva (acquiring sovereignty) (cf. VB III 45), attained by practising tapas and thus getting rid of all the impurities of mind.

kāraṇa-1 कारण-१ (TSB 4; SK 16), cause. The mahābhūtas, according to TSB, are the kāraṇas of their kāryas; e.g. ākāśa is the kāraṇa of jñāna, saṅkalpa, niścaya, anusandhāna and abhimāna in the forms of antaḥkaraṇa, manas, buddhi, citta and ahaṅkāra respectively. Kāryakāraṇabheda कार्यकारणभेद is the differentiation of variegated creation in the mahābhūtas.

kāraṇa-2 कारण-२ (VUI6: YCU 72), one of the three bodies with which human

beings are endowed, the other two being sthūla and sūkṣma. These three bodies are three of the ninetysix tattvas³ - those forms of nature in which the guṇas¹ are clearly differentiated, obviously the ninetysix broad classes in which all the things of the world are divided by VU.

kāraṇatraya कारणयत्र (VS III 8, VI 39), triad of causes. These are gross (sthūla), subtle (sūkṣma) and unmanifested (avyakta). The three letters of praṇava are the triad of causes. In the process of manifestation, the manifested transforms itself first into subtle, and then into gross.

kāranabhāva कारणभाव (SK 9), being essentially of the nature of cause. The sānkhva view is that effect must potentially exist in its cause. According to this theory, water must have a potential existence in the particles of oxygen and hydrogen, in the sense that if a quantity of water is chemically analysed we shall get these two gases. In another sense, however, water is not of the nature of oxygen or hydrogen. It is not a gas, but a liquid; ant it cannot be used, as it is where the need is for oxygen or hydrogen. Hence, when they speak of kāraṇabhāva they have the former kind of implication in view. The essence of the argument is that effect corresponds to cause and, therefore, must be there in the cause in some form.

kārya-1 कार्य-१ (GS I 6, 50), action. Our own good and bad deeds are said to be

responsible for our getting the bodies which we have. **Dantamūladhauti** is classed among the purifying actions; i.e., what one does to purify oneself, particularly one's body. It is a cleansing process.

kārya-2 कार्य-२ (SK 8, 9, 15; TSB 4, 6), effect. The seven *mahadādayas* (etc.) and the sixteen **vikāras** are all effects of **mūlaprakṛti**, which is their material cause.

kārya-3 कार्य-३ (SK 32, 43), that which is done, not the act of doing but the endresult; e.g., not behaving but the behaviour, not running but race, not sensing but sensa, not adopting but adoption.

kāryāvimukti कार्याविमुक्ति (VB, BM II 27), freedom from the functions. The first four prajñās out of seven. This prajñā leads to the functionlessness of citta. However, this stage has not been conceived as the final emancipation. VM, while explaining the term says that it refers to the completeness or sufficientness of the range of human efforts that are necessary for the sake of the attainment of four prajñās (kāryatayā prayatnavyāpyatā darśitā कार्यत्तया प्रयत्नव्याप्यता दिशिता).

kāla-1 काल-१ (SK 50), one of the ādhyātmika tuṣṭis. The commentators explain it thus; kālatuṣṭa is so called because it is contentment based on the knowledge and belief that everything happens at its own time and, therefore, human exertion is not of much avail. It is an impediment in the practice of yoga⁴.

kāla-2 কাল-২ (G 2, 38, 98; GS III 75), death (= time of death). Prāṇāyāma and samādhi¹ ward it off. Vaiśvānarī dhāraṇa is supposed by GS to ward off the fear of fearful death.

kāla-3 কাল-३ (GS V 2), season. Vasanta and śarad are the seasons recommended for commencing the practice of yoga⁴.

kāla-4 কাল-४ (VB III 52), time. A kṣaṇa is the shortest perceptible duration of time according to VB.

kāla-5 কাল-५ (TBU I 15), practising yoga⁴ for a long time and observing the optimum time for each practice according to one's own ability and the progress made. According to this Upaniṣad, kāla⁵ in this sense is one of the components of yoga⁴.

kāla-6 কাল-६ (GS V 2; SSP I 53), time. It refers to the selection of proper season for the sake of the commencement of yogic practice as described by *Gheraṇḍa* in verse V 8-15. The best suitable season for the commencement of the yogic practice is said to be vasanta and śarad.

One of the five factors of **kulapañcaka**, **kāla** is said to have five characteristics-*kalanā* (grasping), *kalpanā* (imagination), *bhrānti* (illusion), **pramāda** (error), and *anartha* (calamity).

kālamukha কালেমুন্ত (SSP VI 43), a term used by *Gorakṣa* to denote a variety of devotee of Lord Śiva. One who worships liṅga which is in the form of eternal bliss is called kālamukha.

kālāgni-1 कालाग्नि-१ (YSU V 29), one of the five fires of the body, established in the nether part.

kālāgni-2 कालाग्नि-२ (BY IX 53), one of forms taken by ap. Ap existing in all the living beings in the form of jyoti helps digestion and illumines the world and dissolves it by taking the form of kālāgni having seven flames in the form of seven rays.

kāṣṭhamauna काछमोन (VB, VM, VBh, II 32), a form of austerity, consists in observing complete silence, not indicating one's ideas even through gestures (iṅgitenāpi svābhiprāyā-prakāśanam इंगितेनापि स्वाभिप्रायाप्रकाशनम्). This has been distinguished from ākāramauna.

kilbisa किल्बिष (TBU I 12; ANU 8), evil disposition. This **bhāva**² is perfectly foreign to the person who has realised brahman, and is therefore brahman himself. Upanisadbrahmayogi elaborates by using the phrase antahkaranagatakilbişa अन्तःकरणगतकिल्बिष, obviously meaning as opposed to dosas which are indriyakrta (performed by indriya). Thus, kilbişa seems to be the same thing as kleśas, which inhere in citta¹ (cf. Patañjali's qualification of citta¹ as asańkhyeyavāsanābhiścitram असंख्येयवासनाभिश्चित्रम YS IV 24). Patañjali recommends krivāvoga (YS II 1) for the attenuation of kleśas¹. ANU recommends dhāranā for burning away kilbişa.

kukkuṭāsana कुक्कुटासन (VU V 15; GS II 5, 31, 33; HP I 23-4; TSM 41-2; VS I 67, 68), one of the most important eleven **āsanas** of which only the **cakr-āsana** is described in VU.

Gheranda counts it among his thirtytwo asanas. According to him, it consists in first adopting the padmāsana obviously the mukta मुक्त padmāsana-pose and then inserting the hands and the fore-arms between the knees and the thighs, resting the body on the elbows, as it were, and raising the whole body along with the foot-lock. In kukkuṭāsana one does not throw the weight of the body on the elbows but on one's palms (cf. HP). Gheranda has thus used the word $k\bar{u}rpara$ कुर्पर for fore-arm. TSM counts this asana among the sixteen principal asanas and one of the ten important asanas enumerated by Vasistha. While discussing its technique HP, GS, TSM as well as VS seem to have an identical view and all have quoted almost the same verses.

kuṭilāngī कुटिलांगी (HP III 100), having crooked form (nature). One of the seven names of kuṇḍalinī. Other six are kuṇḍalī, bhujaṅgī, śakti, īśvarī, kuṇḍalinī and arundhatī. The meaning of kuṭilāṅgi can be explained with reference to its two stagesdormant and awakened: (1) it is crooked in the form because as long as it is lying dormant it is the cause of bondage, suffering and death etc., (2) when it is awakened it ascends from mūlādhāra through suṣumnā which is curved in nature as it runs along the curved spinal cord.

kuṇḍalākṛtisaṃsthāna कुण्डलाकृतिसंस्थान (BY IX 9), residing in the place of coiled serpent (kuṇḍalī). The ātman in the form of bindu is situated in this place.

kuṇḍalini-1 कुण्डलिनी-१ (kuṇḍali कुण्डली) (DU IV 11, VI 42; G 30; BVU 74; TSM 62; HP II 66, III 1-2, 100-19; GS III 39, 49, 51, 56, V 68, VI 16, 18; YKU I 7-8; YCU 35-6, 39, 44; YSU I 82-3, 85, VI 3, 55; SAU I (4) 8, 9, (7) 36: VU V 22, 51), special ability which, when evoked, starts a series of tactual sensations in the back travelling up to the **brahmarandhra** in the head. This activity is sensed by the *yogi* like a *pipīlikāsparśa* पिपीलिकास्पर्श (creeping of an ant).

According to BVU, kundalini is to be moved by exerting pressure on the tongue which is raised and turned upwards. Upanisadbrahmayogi explains this by commenting that only when kundalini rises above its seat the soul is liberated and that until she has not left her seat mukti is impossible, and the person returns after death. TSM describes kundalini¹ as nāgarūpā नाग-रूपा, astaprakṛtirūpā अष्टप्रकृतिरूपा and mahojvalā महोज्वला. Prakṛti is called astaprakrti because it is the potentiality of mahat, ahankara, indriya and the five bhūtas etc. i.e. the five tanmātrās and the corresponding mahābhūtas.

According to YKU, **kuṇḍalinī**¹ (imagined as a snake) holds her tail in her

mouth and her head is set against the mulakanda which is compared to a kamalakanda कमलकन्द most probably because the ovary of the flower sticks to its stalks. Kundalini blocks the opening of the passage along the suşumnā to the head, which is uncovered if the susumnā is raised up a little by yoga4. According to DU, **kuṇḍalin** \overline{i}^1 is situated $1\frac{1}{2}$ below nābhikanda and lies there surrounding the sides of the kanda as if asleep, covering the lower end of the passage leading to the brahmarandhra by her mouth. The fire kindled by arresting vāyu1 in the middle of the mūlādhāra is blown towards kundali¹ and rouses it. According to this text, kundalini is never completely inactive, as even when asleep it is supposed to be the energy behind the ten vāvus1. GS considers kundalini¹ to be a power which is inherent in everybody, but which only the yogis avail of. It is imagined as a serpent shaped Goddess who sleeps in the muladhara coiling herself 3½ times. So long as this power is not aroused even crores of yogic practices do not produce jñāna and the $vog\bar{i}$ remains a brute. This closed door is to be opened by hathayoga as if by a key. Brahmadvāra is opened only by kundalini being aroused; and this can be achieved by the practice of śakticālinī mudrā.

Thus, $\mathbf{kundalin}^{1}$ is the potentiality of an experience, and for this reason it is

called a śakti. But those who have had the experience do not call it an experience which in only a matter of cutaneous sensations. They say that it is a unique experience. It appears that the uniqueness of the experience lies in its fullness and richness. It has been said that in a fully fledged kuṇḍalinī¹ arousal, along with the vāyu¹ rise agni, life force and all; in fact the whole being of a yogī. Such an experience will no doubt be unique. It is said to bring the Supreme Realization to the yogī.

kuṇḍalinī-2 कुण्डलिनी-२ (ATU 5; MBU I (2) 6), an imperceptibly thin structure inside suṣumnā resembling a fibre of lotus stalk but luminous like 10000000 (a crore) flashes of lightning. According to this text, seeing that fire by manas¹ one gets rid of all one's sins and gets liberation from the cycle of birth and death.

kundalini-3 कुण्डलिनी-३ (SSP IV 13, 14), the power of Siva. This is spoken of as having two aspects - aprabuddha (dormant) and prabuddha (actively intelligent). In its dormant aspect it gets manifested in the human body in the form of consciousness which is by nature beset with anxiety, engaged in various wordly activities, and has mysterious nature and hence called kundalini (cf. kutilangi). The same kundalini, when aroused (prabuddha) through yogic practices, becomes transcendental in the sense that through piercing nine cakras she reaches brahmarandhra and unites with Siva. kuṇḍalī कुण्डली (VS II 16), serpent power. A unique energy which is supposed to remain dormant but for the spiritual advancement sake needs to be awakened. According to Vasiṣṭha, it is coiled eight times representing eight prakṛṭis (cf. aṣṭaprakṛṭi) and is supposed to be the source of all knowledge because it consists of all the devanāgarā scripts right from 'a' अ to 'kṣa' क्ष (akārādikṣa-kārāntā अकारादिक्षकारान्ता).

kuṇḍalīsthāna कुण्डलीस्थान (VS II 15, 16), location of kuṇḍalinī. Traversely above the mūlacakra and below the navel is the place of kuṇḍalinī.

kumbhaka-1 कुम्भक-१ (HP II 44, 52, 67, 71, 72, 75, 77; SAU I (6) 1, (7) 2; YKU I 19, 21, 29, 31, 37, 39, 40, 47, 54-5; YTU 37, 43, 50, 68-9; ANU 9, 13; G 47; MBU I (1) 6, II (2) 2; BVU 21, 55; VU V 18, 59; YCU 101, 103; DBU 21, 31; TSM 101, 139, 142, 148; DU VI 13; GS III 45, V 40, 42, 49, 50, 52-4, 59, 71, 73, 76-8, 87), pause in breathing. It is one of the three phases of prānāyāma², the other two being recaka and pūraka¹. It is of two kinds; (1) along with recaka and pūraka¹, that is sahita, and (2) without them, that is kevala. So long as the second does not come of its own accord, the $yog\bar{i}$ is advised to practise the first.

When **kevalakumbhaka**¹ comes of its own accord the $yog\bar{i}$ is said to have achieved everything and his **kuṇḍa-lin** \bar{i} ¹ is said to have arisen.

Eighty kumbhakas¹ are prescribed

four times a day, i.e. 320 everyday. But there is a strict injunction for raising the number extremely gradually. Kumbhakas¹ are to be performed everyday, even on the first day of starting $pr\bar{a}n\bar{a}y\bar{a}ma^2$. The $yog\bar{i}$ is advised to begin with ten rounds of each on the first day. Five more rounds of each should be performed everyday. No limit is generally prescribed. According to YTU, the duration of kumbhaka¹ is to double that of pūraka1. Thus, 320 rounds of the complete prānāyāma² of 112 mātrās¹ are prescribed in twenty-four hours for perfection in prānāvāma². This will take at least ten hours of the $yog\bar{i}'s$ time out of the twenty-four. If a $yog\bar{i}$ succeeds in kevalakumbhaka, then nothing is impossible for him in the world. When the **ghatāvasthā** is reached the $yog\bar{i}$ is advised to perform kevalakumbhaka only once in twenty-four hours.

Kumbhaka is said by YTU to be an integral part of pratyāhāra, mahāvedha as well as mahābandha. For ANU, kumbhaka¹ is not only stopping of breath, but stopping of all activities of limbs also. Breathing can be stopped while swimming, but that will not be kumbhaka¹. The use of the word cintayet चिन्तयेत् in this text shows that kumbhaka is a state of dhyāna too. MBU prescribes kumbhaka for

MBU prescribes **kumbhaka** for manolaya ਸਜੀलय (cessation of **citta-vṛttis**) which appears to be **samādhi**¹ following upon divyarūpadarśana

বিত্যাহুণদ্বহান (seeing an internally aroused light) and divyaśabdaśravaṇa বিত্যাহুল্জন্ (hearing an internally aroused sound, cf. Vyāsa). Practice of amanaskayoga leads to a spontaneous kumbhaka, according to this Upaniṣad. The time recommended by YCU for pūraka is 12, for kumbhaka 16 and for recaka 10 mātrās.

In DBU 21, visnu is said to be kumbhaka¹, but in 31, contemplation of brahmā is prescribed while holding the breath. In 20, however, contemplation of 'om', which is in the middle of the body and is surrounded by tongues of fire, is prescribed while doing kumbhka¹. TSM considers kumbhaka¹ to be a phase of the four-fold klesana of vāyu, the other three phases being recana in the beginning, pūrana प्रण and recana in the end. Kumbhaka1 comes after the first two and before the fourth phase. In this condition the body is (we would now the lungs are) filled with air like a pitcher full to the brim. If a yogi succeeds in performing eighty kumbhakas1 four times, even for one day, he is said to obtain a condonation for all his sins. Continuance of this practice for more than three years makes a man prāṇāyāmapara प्राणायामपर (adept in prāṇāyāma).

kumbhaka-2 কুম্মক-২ (VU V 57, 61; TBU 33), seeing the brahman (= taking resort to Him = withdrawing into Him). This *Upaniṣad* preaches that pūraka and recaka should be merged in kumbhaka. That will be the 'so' ham' सोऽहम् (I am Brahman) with which the yogī is advised to be saturated. This is a strictly Vedāntic view. TBU thinks that the naiścalya नैश्चल्य vṛtti ("I am Brahman") is the only kumbhaka which a perfect yogī may practise.

kumbhaka-3 কুম্মক-३ (GS V 46, 68, 71, 74, 96, VII 10), **prāṇāyāma** in general including more than one phase.

kumbhikā कुम्भिका (GS III 47), encircled.
As a successful result of the practice of prāṇāyāma, kuṇḍalinī as if gets encircled (kumbhikā) by prāṇa which leads to its arousal and activation.

kumbhīkaraṇa कुम्भीकरण (TSM 108), to perform kumbhaka.

kurukṣetra কুকপ্পন (DU IV 49), the region of breast (kuca) is termed kurukṣetra. This has been recognised as one of the holy places in one's own body (ātmatīrtha).

kulapañcaka কুলাইবক (SSP I 49), the fivefold subject-object totality that constitutes the entire universe and activates it. They are sattva, rajas, tamas, kāla and jīva.

kuśala কুয়াল (VB, VM II 27), adept. The puruṣa who has acquired the seven-fold intuitive insight (saptadhā prajñā) is known as kuśala. It also means 'liberated' since it transcends guṇas. Vyāsa equates this stage of puruṣa wherein involution or pratiprasava has taken place.

kuhū कुहू (G 19, 22; VU V 23; YSU V 26;

DU IV 8, 14, 15, 38; YCU 17, 20; SAU I (4) 9, 11; VS II 31, 34), one of the principal **nāḍīs**. According to SAU, the **nāḍīs** surround the **kuṇḍalinī** and spring from it. **Kuhū** is said to be in front of the **suṣumnā** and to extend up to the genitals.

According to VS, one of the fourteen important $n\bar{a}d\bar{i}s$, situated in front of suṣumnānādā. Its range extends from kanda to the end of the penis. G considers kuhū to be situated in the liṅgadeśa and all the $n\bar{a}d\bar{i}s$ to arise from the kanda. Reading G 16 and 19 together, it appears that kuhū runs from kanda to the liṅgadeśa, and all the nervous impulses running between kanda and liṅgadeśa are said to pass along kuhū.

According to Saṅgītaratnākara, kuhū is the pubic nerve of the sacral plexus to the left of the spinal cord. For YSU kuhū is one of the sixteen principal nāḍīs and one of the three which descend from the nābhi. The function of kuhū is here said to be defecation. Like SAU, DU also speaks of the sixteen principal nāḍīs. Kuhū is here said to be situated on one side of suṣumnā and its presiding diety is said to be kṣuddevatā शुद्देवता (a god).

kūṭa कूट (YKU II 20), last syllable to constitute seven-lettered khecarī-mantra which consists of ka क and sa स along with anusvāra and forming a letter क्षं kṣaṃ. The other six being hṛṃ हं, bhaṃ भं, śaṃ गं, maṃ मं, paṃ पं, saṃ सं.

kūṭasthanitya कूटस्थनित्य (VB IV 33), permanent like a rock-here absolutely permanent, not comparatively permanent as cittas¹ are. The cittas¹ are permanent in so far as they do not die with the death of every body which they take. But in the end each one of them has to undergo pratiprasava and cease to exist as a citta¹. Puruṣa¹ are, on the other hand, eternal. No puruṣa ever ceases to exist or undergo a change. This is their kūṭasthanityatā (immutable eternity).

kūrma कूर्म (VS II 42, 53), one of the five secondary vāyus in comparison with five prāṇas etc. prominent vāyus. It pervades the skin and bones and winking is due to the function of kūrmavāyu.

kūrmanāḍi-1 कूर्मनाडी-१ (YS III 31), an organ in the chest below the kaṇṭha-kūpa (cf. Vyāsa). Sthairya results from saṃyama on this nāḍi. Hṛdaya-puṇḍarika (lotus) is another name for this organ (VB I 36). It is not however clear whether it is what we call today the heart. Vyāsa's illustrations and Patañjali's word sthairya show that reference is to the heart working feebly, not to its function being completely stopped. Perhaps the heart functions in a very feeble manner in hybernating reptiles.

kūrmanāḍī-2 कूर्मनाडी-२ (VBh III 31), a place for saṃyama which brings about stability (of citta). VBh understands it to be a cakra situated in the hṛdaya-

pundarika in the form of kurma because it resides like a kundalita-sarpa (coiled snake). However, the reference of this nādī or cakra is not available in later yogic texts. According to Dr. P.V. Karambelkar (Commentary on Yogasūtras published by Kaivalyadhama, Lonavla, pp. 398-99), kūrmanādī means a hollow structure having a resemblance to the shape of tortoise. In human physiology, the stability of body is regulated by the cochlear structure in the ear. This somewhat resembles the oval shape of the tortoise with its extended four legs. kūrmavāyu कुर्मवाय (G 24; DU IV 24, 34; SAU I (4) 12-13; TSM 77, 86; YCU 23, 25), one of the five nāgādi vāyus. It is supposed to work the automatic movements of the eyelids (cf. B.N.Seal's The positive Sciences of the Ancient Hindus). In DU and SAU its function is said to be winking, etc. For GS it is the nervous activity responsible for opening the eyes-obviously the winking reflex-as it is also responsible for closing the eyes. According to TSM, with the five prānādi vāyus, the five nāgādi vāyus also course along the nādis. The function of the kūrma is here said to be closing of the eyes.

kūrmāsana-1 कूर्मासन-१ (GS II 5, 32; VU V 15), one of the principal āsanas mentioned by *Gheraṇḍa*. It consists in placing the ankles contrarywise under the scrotum and keeping the body (the trunk), the head, and the neck straight.

kūrmāsana-2 कूर्मासन-२ (VS I 67, 80), one of the ten important āsanas enumerated by Vasiṣṭha. It consists in covering the anus with the two ankles and pointing (resting) feet in opposite direction and sitting composed.

kṛkara-1 কৃক্-২ (SAU I (4) 12, 13; DU IV 23, 34; G 24; TSM 77, 87; YCU 23, 25), one of the five nāgādi vāyus. Its function is said to cause hunger. It may be contraction of the stomach muscles which gives the sensation of hunger or the nervous process responsible for hunger and thirst. Kṣut, the word used for hunger, also means sneezing. It may be that kṛkala কৃক্ল (another reading for kṛkara) brings about sneezing as well as hunger and thirst. TSM considers its function to be kṣapaya.

kṛkara-2 কুক্-২ (VS II 42, 50, 53), one of the five secondary vāyus in comparison to five prāṇas etc., the prominent vāyus. It pervades the skin, bones etc.. Sneezing (kṣut) is the function of kṛkara.

kṛtārtha कृतार्थ (YS II 22, IV 32), those for whom there is nothing more to be done or known. Here reference is obviously to cittas¹ of the yogīs who have attained vivekakhyāti and not fallen from it. For them there are no pariṇāmas and hence no dṛśya. If they do not fall from this state up to the time when they cast their body, they undergo pratiprasava i.e. they themselves cease to exist as individual kramas and hence as pariṇāmas in any citta¹.

kṛṣṇa কুজা (VB IV 7), one of the three kinds of actions performed by those who are not yogis. Such actions are performed by the evil-doers. Like śukla and śukla-kṛṣṇa actions, they are of the nature of overt behaviour. They cause injury to others. Actions of the perfect yogis are neither kṛṣṇa nor śukla.

kedāra केदार (HP III 23; DU IV 48), the space between the eyebrows. It has also been conceived as śivasthāna (HP IV 48). DU identifies kedāra with lalāṭa (forehead). This has been recognised as holy place in one's own body (ātmatīrtha).

keval केवल (G 77), absolute, a synonym for nirguṇadhyāna.

kevalakumbhaka-1 केवलकुम्भक-१ = kevalī केवली (YKU I 20; HP II 71; GS V 46, 89-93, 96), one of the two kinds of kumbhakas¹, other being sahita. Kevalakumbhaka, according to YKU it comes of its own accord sooner or later after regularly practising sahitakumbhaka¹. GS includes it among its eight kumbhakas¹.

Kevalakumbhaka¹ of Gheraṇḍa (92) seems to be ābhyantara-kumbhaka¹ preceded by inhalation through both nostrils. On the first day the yogī is advised to repeat kevalakumbhaka until he is able to count up to 64 in the state of "no respiration". According to GS, only recaka does not seem to be a part of kevalakumbhaka¹ which may be performed three, or five, or eight

times everyday. In the beginning the duration of pause may be only as long as to enable the $yog\bar{i}$ to repeat mentally the **ajapāmantra** (**so'ham**) five times; then everyday, the number of repetitions should be increased by one. In the **manonman** \bar{i} state the **mantra**¹ can be repeated aloud 30 times in a minute.

kevalakumbhaka-2 केবলকুম্মক-२ (VS III 26-30; VBh II 51), kumbhaka irrespective of pūraka and recaka. A variety of prāṇāyāma. Vasiṣṭha identifies two types of prāṇāyāmasahitakumbhaka

prāṇāyāma and kevalakumbhaka prāṇāyāma. One has to practise sahita-kumbhaka until the kevalakumbhaka is attained. Vijñānabhikṣu equates the fourth variety of prāṇāyāma given by Patañjali (YS II 51) with that of Vasiṣṭha's kevalakumbhaka (asya ca kevalakumbhaka iti sañjñā vasiṣṭhavākyād vyaktī bhaviṣyatīti अस्य च केवलकुम्भक इति संज्ञा वसिष्ठवाक्याद् व्यक्तीभविष्यतीति).

kevalasiddhi केवलिसिद्धि (HP II 71), attainment of the stage of kevalakumbhaka. kevalī केवली (VB, VM, VBh II 27), the seventh or last prajñā (out of saptadhā-prajñā). The state beyond guṇas (kuśala).

kevalīsankhyā केवलीसंख्या = ajapāsankhyā अजपासंख्या (GS V 90), 15 per minute. We are all supposed to be repeating the ajapā mantra at the rate of fifteen per minute. The yogī however, no longer remains bound to this rate of respiration when he is established in **keyalakumbhaka**.

kaivalya-1 केवल्य-१ (YS II 25, III 50, 55, IV 26, 34; SK 17, 19, 21,68; ANU 29), breaking of samyoga. It is said to consist in pratiprasava of citta¹ and svarūpapratisthā of purusa1. VB (II 18) speaks of the sukha of kaivalya, which may be the absence of the duhkha consequent on samyoga and nothing more. This seems to be the sānkhya theory. According to Patañjali, aviplavā अविप्लवा (established) vivekakhyāti leads to dharmameghasamādhi, that to kleśakarmanivrtti and that to kaivalva. The true significance of the word, according to ANU, is existence as one and only one brahman without māyā which is only an illusion. According to this view, everything is brahman. All else is māyā. But Patañjali and Īśvarakrsna do not understand kaivalya in this way. By kaivalva they understand absence of samyoga; and as samyoga is not physical mixture but some kind of relation, which may better be described as coming together; though strictly speaking this too cannot be said of purusa. Kaivalya is separation in the sense of getting apart of those who had come together in some way and is, therefore, of purusa1 as well as of prakrti¹. Since this coming together is the source of misery, separation is necessary and prakṛti¹ itself (Patañjali would say citta1 itself) brings it about

by vivekakhyāti (seeing the distinction between him and puruṣa¹). We can have some idea of kaivalya on the analogy of physical separation. But what it actually is, only a kevalin केविलन् (liberated puruṣa¹) knows. Īśvara-kṛṣṇa emphasises only its negative aspect; that is, freedom from pain, but the other ancient Indian philosophers emphasise its positive aspect, namely bliss (= ānanda). The meaning seems to be the same.

Ekāntātyanto'bhāva एकान्तात्यन्तोऽभाव (complete and final absence) of duḥkha is ānanda which, according to the ancient Hindus, cannot be had without kaivalya. According to Amṛṭanāda-Upaniṣad, kaivalya can be attained in six months if one practises, in the prescribed order and in the right manner, what is taught in this Upaniṣad.

kaivalya-2 केवल्य-२ (VB III 55, IV 34), isolation, liberation. Saṃyama on kṣaṇa and its krama (sequence) results in removal of impurities and thereby the self becomes free from dirt (amalaḥ) and is isolated.

kaivalyajyoti केवल्यज्योति (MBU II (3)1), rediance of the kaivalya state. When a sādhaka is not conditioned by the triad i.e., contemplation, contemplator and the thing contemplated upon, he experiences non-relational character of brahman and thus becomes himself the radiance of kaivalya.

koraṇṭaka कोरण्टक (HP I 6), name of a siddhayogi enumerated by Svātmā-

 $r\bar{a}ma$ in the text in order to pay salutations to his predecessor- $yog\bar{i}s$.

kollāṭamaṇḍapa कोल्लाटमण्डप (SSP II 27), region above the forehead (lalāṭa) known as kollāṭamaṇḍapa. One of the places for antarlakṣya (which resides in the body to be meditated upon). The description suggests that this place is somewhere in between sahasrāra and ājñā. Most of the haṭhayogic texts recognise two more cakras between the above stated two cakras. Those are binducakra and the nādacakra. It seems that SSP identifies the region of kollāṭamaṇḍapa with nādacakra since a particular type of sound is to be heard while meditating on this point.

kośabheda कोशभेद = kośa कोश (TSB 4; TSM 12, 13), differentiation into annamayakośa अन्नमयकोश (the gross material body), prānamayakośa प्राणमय-कोश (the vesture of prana), manomayakośa मनोमयकोश (the vesture manas), ānandamayakośa आनन्दमयकोश (the vesture of ananda). The nature of jiva corresponds to the nature of these kośas which are in fact bhūta vikāra vibhāgas (modifications in the mahābhūtas) and in this sense they can be said to be the vikāras of jīva1. They can also be said to be the vikāras of **Śiva**, but only in the sense that they have no existence outside that One Supreme Reality.

kauśiki কীशिकी (TSM 74), one of the ten principal nāḍis³. It is here said to run from the kanda (yonikanda) to the toes.

krama-1 क्रम-१ (YS III 15, 52, IV 32, 33), a more or less complex system of gunas¹ in action which are movements in prakṛti¹. While in Patañjali's terminology the word parinama stands for the apparently permanent aspects of things, his word for the underlying shape of changes is krama. Y.S. III 15 clearly points to a close correspondence between parināma and krama. Each complex of movements forming a distinct structure is a krama; and although it is a system of movements, the system as that system lasts for some time. That which is seen as lasting, inspite of unceasing change within, is the parinama corresponding to the everchanging krama. Everything is thus transitory and yet things are seen as permanent. Cittas¹ too are parināmas having kramas corresponding to them; and $s\bar{u}tra$ IV 32, therefore, speaks of the end of the corresponding krama along with the parinama which the krtartha citta¹ is. The krama underlies the parināma and can be known and understood only when the citta1 sheds its pre-occupation with the parinama (YS IV 33). All of us with a few rare exceptions live in the world of parināmas of our own making; but the parināmas are not entirely independent of prākṛtika (natural reality outside). The system of beliefs which any one of us entertains is a system of parināma-a system of kramas within kramas as we understand it. That different cittas2 may understand or perceive the same system of **kramas** in different ways is a different matter.

krama-2 क्रम-२ (VB III 52), continuousness. A moment succeeded by another moment without any interruption is called krama.

kriyā-1 क्रिया-१ (YS II 18), movement, motion, agitation, which is the function of rajas and one of the three characteristics of dṛśya, the other two being prakāśa and sthiti-the functions of sattva² and tamas guṇas¹ respectively. kriyā-2 क्रिया-२ (SSP I 57), activity. Activity has been explained to be five fold. These are memory, effort, action, deter-

mination and performance of action of

one's own family tradition.

kriyāphalāśraya क्रियाफलाश्रय (YS, VB, VM II 36), dependence of fruition of action. Sign of perfection in satya (one of the five yamas). A man in whom truthfulness is established becomes the support for the fruition of action. When be utters the words 'go to heaven,' the person addressed goes to heaven, hence the dependence of the fruition of action on the very utterance of the man perfect in truth.

kriyāyoga-1 क्रियायोग-१ (YS, II 1), tapas, svādhyāya and īśvara-praṇidhāna.

These bring about attenuation of the kleśas¹ and prompt the yogī to make an effort for attaining samādhi.

kriyāyoga-2 क्रियायोग-२ (VBh II 1), yoga (in the form) of action. VM equates the yoga of action with *niṣkāmakarmayoga* of *Gītā*. According to VBh, kriyāyoga

is one of the three **yogas** enumerated by $G\overline{i}t\overline{a}$. The other two are $j\overline{n}\overline{a}nayoga$ and **bhaktiyoga**.

krūravāyu क्रूरवायु (GS I 46), disorders pertaining to gases in the alimentary canal. These can be cured by jalavasti.

krodha क्रोध (YS II 34; TBU I 12; MBU I (2) 1; ANU 27), anger, one of the three causes of the vitarkas like hiṃsā, the other two being lobha and moha.

TBU considers it to be one of the **bhāvas**² which are perfectly foreign to a person who has realised the **brahman** and is, therefore, **brahman** himself. According to MBU, the psychological treatment for anger is **kṣamā**. Anger is of a physiological origin like **kāma**. ANU believes **krodha** to be one of the seven things which a *yogī* should avoid scrupulously, the other six being **bhaya**, **ālasya**, **atisvapna**, **atijāgara**, **atyāhāra** and **anāhāra**.

kleda क्लेद (GS I 37), mucus, the disorder which causes disease. By the practice of daṇḍa dhauti one should throw out kleda along with kapha and pitta through the upper passage. This cures the diseases of the gullet.

kleśa क्लेश (YS I 24, II 2, 3, 12, IV 28, 30). According to *Patañjali*, avidyā, asimtā, rāga, dveṣa and abhiniveśa are the five kleśas-the five inborn psychological dispositions. They may for a longer or shorter period remain *vicchinna* विच्छिन्न (scattered), tanu or prasupta. But when they are udāra they are actually prompting behaviour including

cognitions, affections and conations (cf. VB II 4). The behaviour can be avoided by **dhyāna** (YS II 11), but the **kleśas** themselves go only with **pratiprasava** (final disintegration) of the **citta**¹ which entertains them.

kleśakarmanivṛtti क्लेशकर्मनिवृत्ति (VB, VM IV 30), complete uprooting of kleśa (avidyā etc.) and karma, that is, latent deposits of karma either in the form of kuśala or akuśala, i.e. good or bad. This happens only after the attainment of dharmameghasamādhi.

kleśatanūkaraṇa क्लेशतन्करण (YS II 2), (for the sake of) enfeeblement of kleśa. As a result of the practice of kriyāyoga kleśas are enfeebled.

kleśana क्लेशन (TSM 94), manipulation (cf. *Upaniṣadbrahmayogi*). Four phases of vāyukleśana are mentioned in this *Upaniṣad-recana*, pūraṇa, śodhana and again recana. Reference seems to be to sahitaprānāyāma.

kṣa- क्ष

kṣaṇa-1 क्षण-१ (YS III 9, 52, IV 33), the duration for which a krama continues. According to Patañjali, pariṇāma, krama and kṣaṇa correspond to one another. Every pariṇāma is a krama as we know it, and every krama has a duration. By performing saṃyama on the krama underlying a pariṇāma and the time occupied by the corresponding krama the yogīs can have an intuitive knowledge of everything about the object.

The duration for which a citta¹ remains

vṛtti-less is the nirodha kṣaṇa of that citta¹. For that length of time the citta¹ remains niruddha (vṛtti-less). Every niruddha citta is, for the time being, a nirodha pariṇāma. Kṣaṇa in this sense is any length of time-shorter or longer-for which krama lasts.

kṣaṇa-2 क्षण-२ (VB III 15, 52), the shortest duration of time - a moment. Vyāsa's idea is that time is a succession of moments. Patañjali does not speak of time in these terms. For him there is only adhvabheda (a dharma being past, present or future in relation to another dharma). Thus time is only a relation between dharmas.

kṣaṇa-3 क्षण-३ (VM II 50), moment one quarter of the time required for the act of winking (*nimeṣakriyāvacchinnasya kālasya caturtho bhāgaḥ kṣaṇaḥ* निमेष-क्रियावच्छित्रस्य कालस्य चतर्थो भागः क्षणः).

kṣaṇapratiyogī क्षणप्रतियोगी (YS, VB, VM IV 33), antagonistic to quantum of moment. Krama is antagonistic to the quantum of moment. Kṣaṇa is discreet while krama is absence of discreetness, i.e. uninterrupted sequence of moments.

kṣaṇikavāda প্রাণিকবার (VB IV 20), the theory that there is no abiding reality behind the momentary phenomena. Reference is to Buddhism which propagated this theory.

kṣapaṇaka প্রাণাক (SSP VI 64), variety of a *yogī*, one who has completely subdued one's **cittavṛttis**, not afflicted by attraction or aversion and whose **ātman** has become pure like **ākāśa**.

kṣapaya क्षपय (TSM 87), throwing out (elimination). Kṣapayakaraṇas is said to be the function of kṛkara in this Upaniṣad. According to Gheraṇḍa (GS IV 64), however, the function of kṛkara in sneezing.

kṣamā-1 क्षमा-१ (TSM 32; SAUI(1) 4,11; VU V 13; DU I 6, 16; MBU I (2) 2), forgiveness-one of the ten yamas. For SAU it consists in not minding kind or cruel behaviour of others, whether they are friends or foes, and for DU in absence of all emotions even while one is being injured by an enemy's behaviour, evil thought or nasty speech. Patañjali speaks of only five yamas. But his ahiṃsā may be interpreted in a wide sense and thus include kṣamā.

kṣamā-2 क्षमा-२ (VS I 47), forgiveness, one of the ten yamas. An attitude of equanimity towards friend and foes.

kṣara क्षर (BG XV 16), perishable. Everything except **brahman** is perishable.

kṣitijaya শ্বিনিजय (G 69), conquering of the earth element. As a result of the practice of dhāraṇā on pṛthvītattva the yogī can move without being obstructed by solids. This is known as kṣitijaya (cf. Gorakṣaśataka, published by Kaivalyadhāma, p.39).

kṣipta श्বिप्त (VB I 1), one of the five cittabhūmis. In this state the mind is so distracted that it cannot dwell on anything for any length of time.

kṣira-1 क्षीर-१ (HPI62), milk, recommended as wholesome food for yoga practitioners.

kṣira-2 श्तीर-२ (HP III 83), ambrosia oozing from the (cavity of skull) nasopharyngeal cavity-usually termed as kapālakuhara, a point in ājñācakra. A synonym for bindu referred in the context of khecari.

kṣut शुन् (YS III 30), Pantañjali obviously uses this word for hunger. According to him, a successful saṃyama on kaṇṭhakūpa brings to the yogi a perfect control over hunger and thirst. Kṣut is said to be the function of the vāyu called kṛkara. One meaning of the word kṣut is sneezing. The sensory cells which give us the sensation of hunger and those which are excited when we feel like sneezing may both be governed by kṛkara.

kṣura ফু (KU 1, 18), razor (= that which cuts). Manas¹ and manodhāraṇā are compared to a sharp weapon used for cutting, because it is by means of these that the yogi is advised to cut (1) the bands at the ankle and knee joints (the two marmas) as well as (2) at the nāḍis including the suṣumnā. They all bind the ātmā².

kṣetra क्षेत्र (BG XIII 1; YS II 4), the body.
This has been conceived to be of two types-gross body (sthūla śarīra) and subtle body (sūkṣma śarīra or kāraṇa śarīra). The gross body is called the kṣetra because the fruits of action are reaped therein. According to Yogasūtra, avidyā is the breeding ground for rest of the four kleśas.

kṣetrajña-1 क्षेत्रज्ञ-१ (YSU I 134), the indi-

vidual soul. Layayoga consists in its being merged into brahman. Vyāsa (YS II 17, III 49) however, uses the word kṣetrajña for puruṣa¹ who is neither brahman of Vedānta nor the buddhi or citta of the sāṅkhyaminded thinkers.

kṣetrajña-2 क्षेत्रज्ञ-२ (BG XIII 26; VS 6,7), knower of the body, i.e., the embodied self, the ultimate knower. VS uses this term as an epithet for jīvātmā.

kṣetranāśa क्षेत्रनाश (VS V 12), destruction of the gross body, i.e., death. However, the individual self even after the death of the body is confined to the subtle or causal body which resides in air or also in the fire elements.

kṣetrayoga क्षेत्रयोग (VS V 17), attachment of the gross body by the self, i.e. embodiment. Yoga here means a rare occasion. Thus acquirement of the body is a rare occasion to be wisely made use of for higher purposes.

kṣetrī क्षेत्री (BG XIII 33), the soul, the owner of the body.

kha ख

kha ख (VS III 55; HP IV 55), ether. This ether is outside the body-frame and is the residence of mahāprāṇa. This has also been equated with the Comic Self.

khaṇḍa ব্ৰভন্ত (HP I 8), name of one of the hathayogins enumerated by Svātmā-rāma for paying salutation to his predecessors.

khamadhya অন্থ্য (HP IV 55; VS III 55), establishing (oneself) in the Cosmic Self. According to *Vasistha*, one is advised to merge the **prāṇa** in **mahāprāṇa** if one is desirous of casting off the body during the practice of **Kumbhaka**.

khamaya खमय (HP IV 55), identifying (oneself) with the Cosmic Self.

khyāti ख्याति (VBh I 16), knowledge; here discriminative knowledge which arises due to the realization of the insufficiencies and inadequacies of empirical objects.

khegamana खेगमन (GS III 62), the siddhi acquired by success in vāyavīdhā-raṇā. It consists in the ability to fly in the air, or move in the outer space, without the help of any scientific instrument or an aircraft or a spacecraft.

khecarī-1 खेचरी-१ (GS I 51, III 1, 26-7, VII 5, 9; YKU 4, 15-16. 18, 23, 25, 43; YCU 52-7; G 34; YTU 26, 117-8; DBU 80; YSU V 40; HP III 31-2, 36, 38, 40, 41, 52, 53), one of the most important spiritually oriented mudrās.

According to GS, first the tendon joining the tongue to the lower jaw is cut. Then the tongue is constantly moved, rubbed and pulled first with the hand after applying butter to it, and later with a pair of pincers. In this way the tongue is lengthened. This long tongue is slowly pushed up into the aperture in the upper palate. With the tip turned upwards, the tongue is pushed in until it reaches the **kapālakuhara** between the eyebrows inside. The gaze is also fixed on a point inside between the eyebrows. This is **khecarīmudrā**,

which has much in common with **nabhomudrā**. The *yogī* who succeeds in **khecarī** is free from attacks of swooning and from thirst, lassitude, disease, old age and death. His body becomes divine. It cannot be burnt by fire or dried up by wind. Water can do him no injury, snakes cannot bite him. His limbs acquire handsomeness and he attains **samādhi**¹ soon. All this is claimed for **khecarī**.

By virtue of this link between the mouth and the head, the tongue enjoys various tastes; and this enjoyment increases day by day. First he enjoys salt and acid, then bitter and astringent tastes. Then he tastes butter, ghee, milk, curds, buttermilk, honey, grapejuice and nectar. This achievement is that aspect of rājayoga which GS calls rasānanda. It is claimed by DBU that in the yogi who succeeds in this mudra no karmāśavas are formed. YCU thinks that if a $yog\bar{i}$ succeeds in raising his tongue so as to close the opening into the chest, the nectar from his head does not fall into the agni below, nor does his vāyu¹ escape. Perhaps the meaning is that his pavanadhāranā is not broken. It can also mean that his kumbhaka is not broken.

YKU distinguishes between **khecarī abhyāsa** and **khecarimantrasiddhi** (cf. **melana**). The former alone, according to this text, does not bring complete success in **khecarī**.

Abhyāsa of khecarī, according to this

text, begins with stretching the tongue for seven days. Then the aspirant obtains a sharp-edged weapon resembling the leaf of the milkhedge-plant and, after greasing and cleaning it, cuts the fraenum by a hair's breadth. Then he leaves it alone, treating it with a fine powder of myrobalan and rock-salt. The cut is to be repeated every seven days. If this process is carried on for six months the whole of the *yogī's* fraenum will be cut.

Now the tip of the tongue is covered with a piece of cloth and pulled gently and scrupulously at the right time and in the right way. By pulling for six months in this way the tongue can reach the middle of the eyebrows above, the hollow of the ears obliquely and the root of the chin below. If the pulling is continued for another three years the tongue will easily touch the hair above, the śākhā शाखा obliquely and the throat below. After being pulled for another three years the tongue will be able to cross the forehead and touch the skull on top, the culitala obliquely and the kanthabila below. Kanthabila is probably the lowest part of the neck and śākhā the tip of the ear. Special emphasis is laid on this elongation of the tongue being done by slow steps gradually. Trying to pull out the tongue all at once may prove fatal. All this is khecari abhyāsa.

G, YTU and YSU do not mention any cutting or elongating of the tongue.

khecarī-2 छोचरी-२ (MBU II (1) 8), śāmbhavī. This text does not distinguish between śāmbhavī and khecarī mudrās.

khecarī-3 खेचरी-३ (SAUI(7) 15, 17, 39-42), vaiṣṇavī. This text does not distinguish between the vaiṣṇavī and khecarī mudrās.

khecarī-4 खेचरी-४ (YTU 26), one who can know the past and the future. This ability is acquired by practising vajrolī. khecarī-5 खेचरी-५ (YCU 82; YTU 127), that which moves about in ākāśa (cf. Upaniṣadbrahmayogī). According to this commentator, the jīvātmā is called khecarī. The sakāra सकार of haṃsa, which really is the brahman, is the jīvātmā which is khecarī; while the hakāra is the paramātmā. When the jīvātmā (= jantu जन्तु = sakāra सकार) repeats the so'ham mantra he becomes paramātmā. The sky referred to is obviously the ākāśa in the head-

khecarībīja खेचरीबीज (YKU II 18), hrīṃ (cf. Upaniṣadbrahmayogī). Twelve daily repetitions of this mantra make the yogī shed the illusion caused by his being embodied, according to this upaniṣad. Complete success in khecarī is attained by 5,00,000 repetitions. Then the yogī overcomes all obstacles, pleases the gods, gets free from wrinkles and grey hair. Even after this is accomplished the mantrajapa should not be given up; otherwise the yogī will come to grief. Some yogīs,

not the space outside.

well-versed in yoga, attain success in khecarī by mastering the khecarī-mantra (cf. melana) without resorting to pulling of the tongue. The two together bring speedy success. Elongation of the tongue has to be performed for 12 years, i.e. 144 times, before success is attained in khecarī.

On attaining success the $yog\bar{i}$ forgets himself and sees the entire universe in his body. (In the curved passage right above the front teeth where tongue goes in **khecarīmudrā**, the entire macrocosm is seen).

khyāti ख्याति (YS II 5, 26, 28, IV 29), firmly established belief. *Patañjali* has used this word in his definition of avidyā, which consists in the erroneous beliefs that some objects are everlasting, that there are pure things that there really is sukha in the world and that the citta¹ is the real self. In fact, with the exception of puruṣa¹, there is nothing everlasting, perfectly pure, really blissful, or of the nature of the true self.

Vivekakhyāti is the firm belief that puruṣa¹ and citta¹ are absolutely distinct and different entities.

ga- ग

gagana गगन (G 42, 85-87), one of the nine dhyānasthānas. Verses 86 and 87 mention all the 9 of them, but in 78 to 85 only seven sthānas (spots) are mentioned. Here ghaṇṭikāsthāna and lampikāsthāna above the throat are not separately mentioned, though

viśuddha is said to be in the ghaṇṭikā-madhya. Gagana is the highest of the nine centres, and gaganagati गगनगति (moving) is, therefore, raising of the prāṇavāyu to gagana. The adept does it instantaneously whenever he likes. The quickness of the action is described in the words ekena śvāsamātreṇa एकेन श्वासमात्रेण (instantaneously) which is the alternative reading given in the footnote of the text.

gajakaraṇi गजकरणी (HP II 26). Though this performance resembles Gheranda's vamanadhauti, it is not called a dhauti by HP. According to this text, vomiting the contents of the stomach by raising the apānavāyu to the throat is gajakarani and a regular practice of this action brings the nerve-plexus under the control of the $yog\bar{i}$. It appears that in this context, apānavāyu means nothing more than the effort to bring up and throw out the contents of the stomach. It is considered by some physiologists to be an act of anti-peristalsis. gativiccheda गतिविच्छेद (YS, VB, VM, VBh, II 49) suspension of movement (of inhalation and exhalation). Vyāsa explains it as absence of both (ubhayābhāvaḥ). Vācaspati, basing his commentary on Vyāsa, enumerates three kinds of suspensions. According to VBh, the word or the meaning of the word gati is redundant here. Therefore, the word refers to suspension only. The suspension of the natural inhaling and exhaling is called prānāyāma (svābhāvika śvāsapraśvāsayoḥ pratiṣedhaḥ prāṇāyāmaḥ स्वाभाविकश्वासप्रश्वासयोः प्रतिषेधः प्राणायामः)

gandha-1 गन्ध-१ (TSB 6), the kārya¹ (function) of agni⁴ obviously in the form of ghrāṇa which is one of the aṃśas¹ (components) of agni⁴. It is, therefore, said to be the viṣaya of the ghrāṇendriya (the olfactory organ).

gandha-2 गन्ध-२ (TSB 5, 9), one of the five components of ap (water) that which is connected with ahaṅkāra¹. According to this *Upaniṣad*, gandha² is also the name of the jaivatanmātrā in the ghrāṇa indriya. It corresponds to gandha.

gandha-3 गन्ध-३ (VB I 45, II 19), the aviśeṣa of the viśeṣa pṛthivī. It is one of the five tanmātrās, gandha tanmātrā having the characteristics of all the other tanmātrās.

gandha-4 गन्ध-४ (VB I 35), smell. Sensation of smell is said to be possible because the gandhajaivatanmātrā is there in the nose (TSB and G). When a sensation of smell is centrally aroused it helps dhāraṇā and gives repose to the mind. gandhasamvit गन्धसंवित् (VB, VM, VBh, I 35), consciousness of transcendental smell. This is acquired through the concentration at the tip of the nose. This further leads to the repose of mind (manasāsthitinibandhana). VB enumerates other four types of consciousness rūpasamvit, also-rasasamvit, sparśasamvit and śabdasamvit.

gamana गमन (TSB 6), the kārya¹ (fun-

ction) of **pṛthvī**, obviously in the form of **pāda** which is one of the **aṃśas¹** (components) of **pṛthvī**. It is also said to be the **viṣaya⁴** of the **pādakarmendriya** (action-organ). *Īśvarakṛṣṇa's* word for **gamana** is **viharaṇa**.

garuḍāsana गरुडासन (GS II 5, 37), one of the thirty-two āsanas¹ enumerated by *Gheraṇḍa*. It consists in pressing the ground with legs and thighs, keeping the body steady with the help of the two knees, and placing both hands on the knees.

gāndhārī गान्धारी (VU V 26; YSU V 21; YCU 17, 19; TSM 71; SAU I (4) 9, 11; DU IV 8, 17, 22, 38; G 18, 20 VS II 31, 38), one of the principal nādīs². According to VU, it runs between susumnā and sarasvati, not exactly to the left of susumnā but a little backwards. YSU considers it to be one of the sixteen principal nādīs². It goes from the nābhicakra to one of the eyes, probably the left. The $n\bar{a}d\bar{i}^2$ which goes to the other eye-probably the right, is hastijihvā. TSM supposes gāndhārī to run along the susumnā in front of it. SAU believes it to be one of the fourteen important $n\bar{a}d\bar{i}s^2$ and to extend from behind the $id\bar{a}^1$ to the inside of the left eye.

According to saṅg itaratnākara (144-156) and Yogārṇava, it is one of the fourteen most important nerve ends of the sympathetic chain which is supposed to stretch from the cornea of the left eye to the left leg.

gāyatrī-1 गायत्री-१ (ANU 10), tatsaviturvareṇyaṃ bhargodevasya dhīmahi. dhiyo yo naḥ pracodayāt तत्सिवतुर्वरेण्यं भगों देवस्य धीमहि. धियो यो नः प्रचोदयात् (we meditate upon the brilliance of god Savitā. May He enlighten our intellect). According to ANU, this mantra¹ along with the praṇava, the vyāḥṛtis and the śiras is to be repeated thrice during each prāṇāyāma². It is to be repeated once during inhalation, once during exhalation and once while holding the breath. gāyatrī-2 गायत्री-२ (GS V 84; YCU 33, 35), ajapā.

gāyatrī-3 गायत्री-३ (SAU I (6) 3), the goddess gāyatrī, whom the yogī practising prāṇāyāma² sees in front of him while reciting om². She is described as young, wielding a stick in her hand, riding a swan and of the colour red. She spreads a moonlight-like lustre all around.

gāvatrī-4 गायत्री-४ (VS III 5; BY IV 1-82), name of a goddess (recognised as gāyatrī). The embodied female deity of the first letter of pranava. According to VS, a gāyatrī has to be meditated upon during the pūraka phase of prānāyāma. She is chaste adolescent female figure of sixteen years, having red complexion, riding on a swan and holding a stick in her hand. Vasistha has personified all the three letters of pranava amongst which 'a' अ is personified as gāyatrī. The application of gāyatrī mantra during prāņāyāma has been emphasised by BY in different and various ways (cf. BY).

gārhapatya गार्हपत्य (BVU 4), one of the three sacred fires. This is kept alive on the west side of the altar for all the twentyfour hours, covered with ashes when the daily worship is not going on. Its pit is circular in shape.

girāmauna गिरामोन (TBU 22), ordinary silence, silence about everything. This is the characteristic of ignorant people and is not a yogāṅga, Mauna in this context is silence about the nature of the one Superme Reality.

guṇa-1 गुज-१ (YS II 19, IV 13, 32, 34; VB II 15; SK 11; G 28; VU I 11; TSB 9), sattva², rajas¹ and tamas². VB has made it clear that guṇas¹ in action are movements and Patañjali seems to believe that the action of guṇas¹ consists in innumerable movements of different velocity. Most probably, according to him, sattva², rajas¹ and tamas² are bands of relatively higher and lower frequencies corresponding to the motions that they are.

These three are strictly relative terms-sattva² corresponding to the relatively highest, tamas² the comparatively lowest and rajas the intermediate frequencies. Hence the justification for the Gitā speaking of sāttvika (related to sattvaguṇa), rājasika राजसिक (related to rajas guṇa) and tāmasika तामसिक (related to tamas guṇa) men, foods, charities, sacrifices, etc. VB also considers the relative predominance of the three guṇas¹ to be responsible for śānta, ghora and mūḍha vṛttis¹.

According to *Patañjali*, the **dṛśya**, with which **puruṣa¹** has **saṃyoga** (a beginningless relation), consists of **guṇas¹**. SK regards the **triguṇa¹** quality to be one of the six characteristics common to **pradhāna** (primal nature) and **vyakta** (manifest nature).

VU believes the **guṇas**¹ to be three of the 96 **tattvas**², and according to *Gorakṣa*, they are the **prakṛti**¹ with which **puruṣas**¹ have **saṃyoga**. He thinks that **kuṇḍalini**¹ when aroused-rises upwards and the yogi is conscious of it on account of the **prajīvaguṇa**, i.e. the dominant **guṇa**, which dominance he has acquired after a long endeavour.

guṇa-2 गुज-२ (G 77), imagery. Saguṇa dhyāna is contemplation of the Supreme Being (ātmā) while imagining an element (tattva¹) in one of the cakras in the body or, for that matter, imagining any other object; while nirguṇa dhyāna is meditation of the Supreme Being without entertaining any image whatsoever.

guṇa-3 गुण-३ (TSB 9). In TSB 9, śabda, rūpa, rasa and gandha are said to be the guṇas of the five antaḥkaraṇas. Guṇa¹ in this sense is an indirect connection. The antaḥkaraṇa jñātṛtva is connected with the mahābhūta ākāśa and that with the viṣaya⁴ known as śabda.

guṇakarmavibhāga गुणकर्मविभाग (BG III 28, IV 13), classification of the people on the basis of the dominant guṇas in their action. People can be classified on

the basis of permutation and combination of three guṇas (sattva, rajas and tamas) in their action in several numbers of types, but BG speaks of only four.

gunaparva गुणपर्व (YS II 19), viśesa, aviśesa, lingamātra and alinga, which are the different concepts of the universe at different levels of metaphysical analysis and differentiation. The alinga form of the gunas1 differentiates and manifests itself in the form of lingamātra which, in its turn, appears as the aviśesas, which manifest themselves as the viśesa. It appears that the viśesas are the discrete individual selves, living bodies and lifeless objects, the aviśesas being the comparatively undifferentiated matter (called mahābhūtas and tanmātrās) which takes the forms of the viśesas. Lingamātra is the still more undifferentiated matter in which appear both psychical and physical viśesas and aviśesas. Alinga is the completely undifferentiated mass of prakrti1 (nature), about which nothing more can be said.

guṇapravṛddha गुणप्रवृद्ध (BG XV 2), nourished by the guṇas. The world-tree (saṃsāravṛkṣa) is nourished by or activated by the three guṇas,-sattva, rajas and tamas. These are the material cause (upādāna kāraṇa) of the world.

guṇabhoktṛ गुणभोक्तृ (BG XIII 14), experiencer of the guṇas,-sattva, rajas and tamas. Though the jñātā (knower, the self) is devoid of the guṇas (nir-

guṇa) yet it is the enjoyer, perceiver of those sense-objects and the pleasure and pain related with them which are caused by guṇas. Hence (the jñātā or Self) is the enjoyer or experiencer of guṇas.

guṇavṛttivirodha गुणवृत्तिविरोध (YS II 15), mental conflict - a conflict in the mind between the vṛttis¹ of sattva², rajas¹ and tamas² guṇas. Sāttvika, rājasika, and tāmasika vṛttis¹ are those in which sattva², rajas¹ and tamas² respectively predominate. Such mental conflicts being always present in every human being, life is essentially painful. The impulses to perform sāttvika, rājasika and tāmasika actions are incessantly clashing with one another in every one's mind.

guṇavaitṛṣṇya गुणवेतृष्य (YS I 16), complete indifference towards the guṇas.

Since the citta¹ is itself guṇatmaka (related to guṇas), guṇavaitṛṣṇya in this context, is indifference on the part of the citta¹ to its own existence.

guṇasaṃkhyāna गुणसंख्यान (BG XVIII 19), the science of the guṇas. Here it refers to kapila's Sāṅkhya system of philosophy, which has been acknowledged as authoritative exposition of the functionings of the guṇas.

guṇasaṅga गुणसंग (BG XIII 21), attachment to the guṇas. The identification of puruṣa with guṇas, i.e. prakṛti leads puruṣa to think 'I am deluded'. This attachment of puruṣa to what it experiences, -in the form of pleasure, pain and

delusion,-is the root-cause of the cycle of birth and death.

guṇātīta गुणातील (VB, VM II 27), transcending of guṇas. Puruṣa that has transcending of guṇas. Puruṣa that has transcended the guṇas is called guṇatīta. Vyāsa uses a synonymous term 'kuśala' connoting the same.

guṇātmā गुणात्मा (VB, VM IV 13), having gunas as the essence.

guṇādhikāra गुणाधिकार (VB, VM II 3), efficacy and mode of functioning of guṇas and these are said to be chanelised by kleśas leading to fructification of action.

guda-1 गुद-१ (G 11, 37, 86; HP I 22; KU 7; ANU 34; TSM 38), one of the nine dhyānasthānas. It is the spot known as the anus. Contraction of this part is prescribed for mulabandha. Guda is the seat of the cakra1 known as ādhāra. It is perhaps the coccygeal plexus. KU thinks that this part of the body along with the two ankles, the two shanks, the two knees, the two thighs and the genitals is to be properly adjusted for getting into a posture most conducive to raising of vayu from mūlādhāra to the nābhideśa (navel region). The anus obviously is to be contracted, i.e., mulabandha to be adopted. Guda is supposed to be the seat of apāna1 according to ANU.

guda-2 गुद-२ (TSB 9), pāyu.

guptāsana-1 गुप्तासन-१ (GS II 4, 20), one of the thirtytwo asanas¹ enumerated by Gheraṇḍa. It consists in inserting the

two feet between the two thighs and the two shanks and then sitting on the latter two. In this **āsana**¹ the feet are kept concealed. Hence the name of the **āsana**.

It is a variety of **siddhāsana** in which the generative organs are also advised to be kept hidden between the two feet.

guptāsana-2 गुप्तासन-२ (HP I 37), siddhā-sana.

guru-1 गुरु-१ (SK 13), heavy, -one of the four characteristics of tamas²

As opposed to **tamas**², which is described as heavy, **sattva**² is described as light.

guru-2 गुरु-२ (HP III 125; ATU 15), teacher, one who imparts the traditional knowledge. Only the knowledge imparted through the lips of the guru is effective. All else is fruitless and in effective. According to ATU, a true guru² must be himself devoted to his guru², and who has realised his puruṣa¹, Literally, one is a guru², because of one's ability to remove the darkness of ignorance from the pupil's mind.

guru-3 गुरु-३ (VBh I 26; SSP V 5), preceptor. Guru is the one who removes the vikalpa and thereby restores the equilibrium in citta. According to SSP, one who directs the disciple to the right path and removes the eight pāśas, (pāśāṣṭaka) is the guru.

gurukulasantāna गुरुकुलसन्तान (SSP V 43), santāna refers here to tradition. Thus the word means a long tradition of **gurus**. SSP enumerates five such traditions. These are; (1) $\bar{a}i$ santāna आई सन्तान, (2) vileśvara santāna विलेश्वर सन्तान, (3) vibhūti santāna विभूति सन्तान, (4) nātha santāna नाथ सन्तान, and (5) yogīśvara santāna योगिश्वर सन्तान.

gulpha गुल्फ (VS III 62, 65), ankle. The second vital point (marmasthāna) in the body. It is located at four and half fingers above the big toes.

guhā गुहा (VS VI 4, 28, 29), internal void/ space in the heart region. Vasiṣṭha suggests to reach the internal void through the practice of yoga, especially for those who do not want rebirth. Establishment of citta in heart region without any desire for fruit liberates one from the bondage of birth and rebirth.

gudhacitta गृढचित्र (BY II 62), having highly contemplating mind, One of the five kinds of realised souls. Others are: (1) practising esoteric vows, (2) having pure heart, (3) engaged in the meditation of om, and (4) practising the mysterious austerities.

gudhatapa गृहतप (BY II 62), mysterious austerities. Those who practise mysterious austerities form one kind of realised souls (brahmavidaḥ).

gūḍhasupta गृढसुप्त (VU IV 16), the last of the seven stages in progress of yoga⁴. After practising yoga⁴ for a long time, in the first six stages, the distinction between jīvātmā and paramātmā disappears and the identity of the two becomes the very nature of the yogī. This is the gūḍhasupta state.

In this state there is neither existence nor non-existence, neither self nor notself. There is no mental functioning and there is a complete absence of fear because of non-duality. This is a state of **jīvanmukti** (liberation while alive).

grhastha गृहस्थ (SSP VI 35), one whose home is immovable sky wherein one dwells permanently and whose spouse is eternal completeness.

gomāṃsa गोमांस (HP III 46, 47), literally means cow's flesh, but here the term 'go' गो stands for the tongue and its entry into the tālu (roof of the nasopharyngeal cavity) is known as gomāṃsa bhakṣaṇa गोमांस भक्षण. This happens when one attains khecarīmudrā.

gomukhāsana-1 गोमुखासन-१ (GS II 3, 16; HP I 20; SS V 9; VU V 16; DU III 1, 3; SAU I (3) 2), one of the thirtytwo āsanas¹ mentioned by *Gheraṇḍa*. It consists in placing the feet on the ground-the right (ankle) touching the left side of the back and left (ankle) the right side, keeping the body steady, and thus assuming the shape of a cow's mouth. According to VU, gomukhāsana¹ consists in placing the left heel on the right side of the waist and right heel on the left side.

gomukhāsana-2 गोमुखासन-२ (VS I 67, 70), one of the ten āsanas enumerated by vasisṭha. Its technique lies in assuming erect sitting position and setting right ankle by the side of the left hip and vice versa. The position of hands is neither mentioned in VS nor found

in HP or GS. In HP (Kaivalyadhama edition, 1980), it is suggested that the palms are to be placed on the toes of the feet so as to resemble the ears of a cow. This, of course, makes the technique in tune with the name of the **āsana**. gorakṣa गोरक्ष (HP I 5), a prominent yogī referred by Svātmārāma to offer his salutation to him. Gorakṣanātha is supposed to be the pioneer of hathayoga. goraksāsana-1 गोरक्षासन-१ (GS II 4, 25), one of the principal asanas1. It consists in placing the two feet between the two thighs and the two legs with soles turned upwards so that they remain visible, covering the heels scrupulously with the hands upturned, contracting the throat (obviously by jalandharabandha) and gazing at the tip of the nose. Practice of this **āsana**¹ brings success to a $yog\bar{i}$.

gorakṣāsana-2 गोरक्षासन-२ (HP I 53-4), bhadrāsana.

golākha गोलाख (BVU 73), one of the nine nervous pathways, called navadvā-rāṇi, in the head. They are to be stopped by khecarī mudrā for going into the samādhi¹ state.

granthi-1 ग्रन्थि-१ (BVU 70; YKU I 67, 85; VU V 65), a hurdle in the way of vāyu¹ rising along the suṣumnā. According to YKU, kuṇḍalinī¹ has to overcome these obstacles before it can enter the susumnā.

granthi-2 ग्रन्थ-२ (HP V 5, 13), accumulation of vāyu at one place in the body. Improper practice of prāṇāyāma leads

the **vāyu** to a wrong direction which results into accumulation of **vāyu** at improper place causing several functional disorders.

granthitrayabhedaka ग्रन्थित्रयभेदक (HP II 67), that which pierces through the three knots. The practice of bhastrikā pierces the three knots. In yogic literature, these knots are known as brahmagranthi, viṣṇu-granthi and rudragranthi and they are located at the navel-region, heart region and throat region, respectively. Since these knots are recognised as obstacles for free flow of prāṇa along the path of suṣumnā, they are to be pierced through.

grahaṇa-1 ग्रहण-१ (SK 9), taking. The fact that its material cause is sought if it is desired to produce anything, proves that every effect is to be found in its material cause and nothing else. This is Gauḍapāda's interpretation of the word grahaṇa in the phrase upādānagrahaṇa उपादग्रहण used in the SK.

grahaṇa-2 ग्रहण-२ (TSB 6), kārya¹ and viṣaya⁴ of the vyāna aṃśa¹ of vāyu¹. It is most probably absorption of the nutrition by the tissues which is said to be the function of the vyānavāyu. Vyāna is generally described as vyāpī (cf. VB III 39). Absorption also is done all over the living organism.

grahaṇa-3 ग्रहण-३ (YS I 41; VB I 41, III 47 IV 14), one aspect of cognition as opposed to the other two aspects, viz., grahītṛ and grāhya. Grahaṇa³ is the

act of cognition. In III 47 Patañjali distinguishes between cittasvarūpa and cittavrttis and calls the latter grahana³. So does Vyāsa. In YS I 41, however, Vyāsa considers the indriyas¹ to be grahana³ and takes the purușa¹ to be the grahītr. This is probably based on the significance of the locative case as ordinarily understood. Patañjali does not seem to have used the locative in this sense. By the locative case here he seems to mean "from among". If out of these three aspects of cognition one merges into another, the third automatically disappears. Hence there is left neither a grahitr nor any grahana3. Only that which was the grāhya³ remains. This is samāpatti. Grahanātmaka gunas are gunas¹ appearing in the form of grahana (indrivas).

grahītṛ प्रहीत् (YS I 41), the knowing subject, which is one of the three facets of cognition, the other two being grahaṇa and grāhya. VB, however, takes grahītṛ to be puruṣa¹ and distinguishes between grahītṛ puruṣas¹ and mukta puruṣas¹. In this sense, grahitṛ is not guṇātmaka (of the nature of guṇas).

grāhya प्राह्म (YS I41) the object cognised. It is one of the three aspects of cognition. When the grahītṛ (the subject) of cognition merges into it samāpatti ensues. Then there is no grahītṛ-grāhya relation. The grāhya alone remains but no longer as the grāhya of

the grahītṛ. Patañjali defines samāpatti as tat तत् assuming an existence
in its own right after absorbing the
"tatstha". The tat was the grāhya
before the cittavṛtti gave place to
samāpatti. But in the state of samāpatti it can no longer be called a
grāhya. Patañjali calls it only tat.

grāhyaśakti प्राह्मशक्ति (YS III 21), We perceive objects (which are not themselves lights), because our eyes are stimulated by the rays of light reflected from them. As a result of successful saṃyama on what Patañjali calls kāyarūpa (light as reflected by a body) the yogī does not allow his body to reflect any light. In this way his body remains in complete darkness (cakṣuḥ-prakāśāsamprayogaḥ चक्षुःप्रकाशासम्प्रयोगः) and the yogī becomes invisible. Thus by grāhyaśakti, Patañjali means the ability of the body to reflect the rays of the light falling on it.

gha-घ

ghaṭa-1 घट-१= ghaṭastha घटस्थ (GS I 2, 9), yoga⁴ which Gheraṇḍa has taught to Caṇḍakāpāli. Presumably, ghaṭasthayoga is another name for what is ordinarily known as haṭhayoga - and perhaps a better name. In this compound word ghaṭa, of course, includes the mind. It does not mean only the body. The seven achievements of this yoga are: ṣaṭkarma, āsana¹, mudrā, praṭyāhāra¹, prāṇāyāma, dhyāna and samādhi¹ to each of which Gheraṇḍa devotes one chapter of his

discourses. In this way while *Patañjali's* yoga is *aṣṭāṅga* अष्टांग, **Gorakṣa's** ṣaḍaṅga षडंग, HP's caturaṅga चतुरंग, Gheraṇḍa's **haṭhayoga** is *saptāṅga* सप्तांग.

ghata-2 घट-२ (YTU 20, 65, 66, 80; VU V 71, 74; HP IV 69), one of the four stages of progress in yoga⁴, By YTU it is described as union of prana and apana, manas and buddhi1, and jīvātmā and paramātmā, the last of these being further described as the characteristics of samādhi¹. According to VU, in this state, after piercing the **susumnā** with it the steady $yog\bar{i}$ holds the vayu1 in the head (cf. Gheranda's nabhomudrā). According to HP, while at the first stage his brahmagranthi is pierced and tinkling sounds are heard by the $yog\bar{i}$, at this, the second stage the, visnugranthi is pierced and a mixture of many sounds and the sound of a kettle drum are heard.

ghaṭa-3 ঘट-३ (GS I 6, 14), the body. Every living being acquires a body as the result of his or her own past karmas.

ghaṭa-4 ਬਟ-४ (GS I 8), an earthen pot. Like an earthen pot the body should be baked hard in the fire of yoga⁴.

ghaṭaśuddhi चरशुद्धि (GSI8), purification of ghaṭa, that is, the body. Here the body has been equated with unbaken jar. In order to attain yoga, it must be condi-tioned and purified through the fire of various yogic practices.

ghatasodhanakāraka घटशोधनकारक (HP

II 23), that which purifies the body. All the six cleansing processes are the means to purify the body (cf. **ghaṭa-śuddhi**).

ghaṭasthayoga घटस्थांग (GS I 2), the yoga taught by *Gheraṇḍa*. It is the same yoga as it called haṭhayoga by HP.

ghaṇṭikā ঘটিকো (G 83, 86), one of the nine dhyānasthānas. It is the lowest part of the throat, the upper parts being tālumūla and the lampikā sthāna (spot). Viśuddha dhyānasthāna is situated inside the ghaṇṭikā sthāna (spot).

ghanaprajña ঘনমন (BY II 88-90), a synonym for suṣupti stages of consciousness. BY depicts three stages of consciousness, viz., bahiḥprajña, antaḥprajña and ghanaprajña denoting the jāgrat, svapna and suṣupti states respectively.

gheraṇḍa घेरण्ड (GS I 1), expounder of the ghaṭasthayoga. Through his famous treatise on ghaṭayoga, viz., Gheraṇḍa Saṃhitā, Gheraṇḍa has also been recognised as one of the expounders of haṭhayoga.

ghoḍācolī घोडाचोली (HP I 8), name of a $yog\bar{l}$, mentioned by $Sv\bar{a}tm\bar{a}r\bar{a}ma$ to offer his salutation to him.

ghora घोर (SK 38), with rajas¹ predominant. It is generally believed to be one of the three kinds of viśeṣas, the other two being śānta (sattva predominant) and mūḍha (tamas predominant). The mahābhūtas are generally supposed to be the śānta, ghora

and mūḍha viśeṣas. But according to \bar{I} śvarakṛṣṇa, the sūkṣmas, mātā-pitṛjas and prabhūtas should be those three viśeṣas which are śānta, ghora and mūḍha respectively. He does not appear to hold that the mahābhūtas are the śānta, ghora and mūḍha viśeṣas. If the śānta, ghora and mūḍha viśeṣas are considered to be the mahābhūtas, as is done by $V\bar{a}$ caspati Miśra, then that should all be tamas² predominant. This position would not be acceptable to \bar{I} śvarakṛṣṇa.

ghoṣiṇi घोषिणी (NBU 9), the first mātrā¹ of the prāṇāyāma². If a mantrayogi मन्त्रयोगी dies when he is at this mātrā¹ of the oṃkāra he is reborn as the heirapparent of an emperor. This is how MBU puts it.

ghrāṇa-1 झाण-१ (SK 26; TSB 5, 9), one of the five buddhīndriyas (senses), the other four being cakṣu, śrotra, rasanā and tvak. It is the olfactory sense. According to TSB, the five buddhīndriyas (senses) are the aṃśas¹ of vahni and it is through this aṃśa of vahni by means of prāṇa¹ that ahaṅkāra¹ is said to reside in pṛthivī.

ghrāṇa-2 च्राण-२ (TSM 141), the nose. It is the part of the body where from the vyoma sthāna (spot) begins.

ca-च

cakra-1 चक्र-१ (G 15, 60, 62, 63, 78, 80; GS III 34; TSM 60; YCU 6, 13). Of the nine dhyānasthānas only four are specifically mentioned by *Gorakṣa* as cakras. They are ādhāra, maṇi-

pūraka, anāhata and viśuddha. The seats of these cakras have been described, but the word cakra¹ is not defined. Presumably these are nervecentres which are situated by the side of or in the spinal cord. But of the remaining five dhyānasthānas, four are the nerve-centres above the spinal cord, and one in the region of the anus. Though this word is not defined even by Gheranda, the fact that he advises the $yog\bar{i}$ to meditate on the six cakras, one after the other, clearly shows that they are what Goraksa calls dhyanasthānas. TSM uses the word cakra in the compound dvādaśāracakra, which is a wheel-like structure with twelve spokes and is situated in the nābhi. The spokes are supposed to bear the images of visnu and other gods. This cakra is compared to the web of a spider and jiva1 is said to wander through its spokes, which may be the beginnings of the nādīs2.

Only ten nāḍ̄is² are mentioned in TSM, while according to *Gorakṣa*, the ten vāyus¹ operate in the form of jīva¹ through thousands of nāḍīs². YCU mentions the following six cakras¹: ādhāra, svādhiṣṭhāna, nābhi, hṛdaya, viśuddha and bhrūmadhya. The cakras¹ revolve by the māyā of brahman according to TSM.

cakra-2 चक्र-२ (SK 67), the potter's wheel. As the wheel goes on whirling by its own momentum, even when the potter has ceased to apply any force, so the body continues to live so long as the past **saṃskāras** have not spent themselves.

cakra-3 चक्र-३ (VU V 15, 17), one of the eleven **āsanas**¹ mentioned in this *Upaniṣad*. It is just squatting with folded legs. (sukhāsana).

cakra-4 चक्र-४ (VS II 12, 13), wheel of transmigration, a circle with twelve spokes that is said to support the body and is situated at the centre of the navel (nābhi) (cf. kanda). It is from this circle the individual self (jīva) is said to transmigrate due to its merits and demerits.

cakradhāriṇi चक्रधारिणी (VS III 6), a goddess who wears a wheel in her hand. She is the embodiment and personification of the second letter of praṇava, i.e, 'u' Cakradhāriṇi has to be meditated upon during the kumbhaka phase of prāṇāyāma. She has been depicted as a young lady of thirty years old with white complexion and riding on the eagle.

cakṣu-1 चक्ष-१ (TSB 5, 9; SK 26), according to TSB, one of the five aṃśas of vahni. It is in the form of cakṣu that the rūpa guṇa resides in vahni and exists in the form of vahni. Cakṣu is one of the five buddhīndriyas (senses). A buddhīndriya¹ is not a part of the body or a physiological structure. It is, therefore, neither a physiological sense-organ nor any other part of the sensory apparatus; but in Patañjali's language a viśeṣa of the aviśeṣa

asmitā. The cittas are made up of indriyas.

cakṣu-2 অধ্য -২ (ATU 5; YS III 21), the physical eye. A blue light is seen by the successfully meditating yogī on the spot inside between the two eyes (ATU). According to Patañjali, a yogī becomes invisible if by force of saṃyama he prevents rays of light reflected by his body from falling on the eyes of others.

cakṣu-3 चक्षु -३ (ATU 10), the visual nervous apparatus. **Brahman** in the form of a white light is seen by the **yogīs** by their **manas¹** working in cooperation with the visual nervous apparatus, not by their eyes.

cañcalatva चंचलत्व (G 26; GS VI 19; HP IV 26), incessant motion. Life is incessant motion. For this reason it is difficult to grasp it.

According to Gheraṇḍa, when kuṇḍalinī reaches above the level of the eyes, no sensations are experienced and this is ascribed to its cañcalatva. What is meant seems to be that, cañcalatva being a characteristic of prakṛti¹ in general, different ranges of velocity of movement act on different sense-organs, different velocities in the same range act in different ways on the same sense-organ so as to produce a sensation. Some such is the velocity of kuṇḍalinī¹ above the level of the eyes. As is done in the Ḡitā also cañcalatva is ascribed to manas¹ in HP.

caturakṣara चतुरक्षर (BY IX 10), oṃkāra

consisting of four syllables. BY considers **oṃkāra** as having four syllables, i.e., **a** अ , **u** उ, **m** म् and the *anusvāra* अनुस्वार (nasal sound).

caturasiti चतुरशीति (HPI33), eighty-four. Svātmārāma considers eighty-four āsanas in all. Eightyfour has become a legendary number with the writers on yoga. The number eighty-four thousand or eightyfour lakhs probably mean innumerable. According Gorakṣa, there are as many āsanas as the number of species of creatures.

caturtha-1 चतुर्थ-१ (YS II 51), the fourth prāṇāyāma for which it is not at all necessary to inflate or to empty the chest. While for the stambhavṛtti-prāṇāyāma², which VB calls tṛtīya तृतीय (the third) some respiratory movement is consciously or unconsciously performed before stopping the breath, the fourth entails no such movement at all. This ability is acquired gradually by practising the first three kinds of prāṇāyāma for a long time. Patañjali's fourth prāṇāyāma² is the true kevalakumbhaka¹.

caturtha-2 चतुर्थ-२ (YS II 63), the fourth. This is related to the term saptamasya, i.e., fourth syllable of the seventh class of the letters. The fourth syllable of this class of letters is 'va' ন. One is directed to concentrate upon va ন during pūraka phase from iḍā.

caturdala चतुर्दल (G 11), with four petals. The pañkaja (lotus = padma) in the ādhāra is said to be caturdala. The epithets **padma** and **pañkaja** are applied by *Gorakṣa* to two **cakras** only; viz. **ādhāra** and **anāhata**.

caturmukha चतुर्मुख (TSB 8), one of the twelve adhidevatās (gods) of the twelve nāḍīs². These gods work the nāḍīs² and are said to preside over them. Presumably caturmukha is the god known as brahma.

caturvāra चतुर्वार (HP II 11), four times (in a day), i.e., in the morning, at noon, in the evening and at midnight. The sādhaka is advised to practise kumbhaka four times a day.

caturviṃśatitattva चतुर्विशतितत्त्व (MBU I (4) 3), the twentyfour principles. According to *Upaniṣadbrahmayogī*, they are:

5 jñānendriyas (senses),

5 karmendriyas (action organs),

5 vāyu1 (kinds of reflexes),

5 mahābhūtas (elements), and

4 antaḥkaraṇas (internal organs). In this text they are said to be svakalpita स्वकल्पित (self-made).

caturvyūha चतुर्व्यूह (VB, VM II 15, 16), having four aspects. Just as Ayurveda (Indian Science of Medicine) has four aspects like Disease, Cause of disease, Absense of disease and the Remedy, similarly, the yoga-science too can be explained as having four aspects like, saṃsāra (cycle of birth and rebirth), the cause of saṃsāra, liberation, and the means of liberation.

catuṣka चतुष्क (HP I 33), a collection of four. Out of eightyfour legendary

number of **āsanas**, only four are considered to be most important. These are **siddha**, **padma**, **siṃha** and **bhadra āsanas**.

catuṣkala चतुष्कल (BVU 18), the four-the viśva, taijas, prājña and turya-aspects (cf.Upaniṣadbrahmayogi) of the catuṣkala haṃsa. It is not said what these four are. Presumably they are what are generally known as the four puruṣas¹.

catustayasyavṛtti चतुष्टयस्यवृत्ति (SK 30), function of the four, three of which are (as mentioned in the previous $K\bar{a}rik\bar{a}s$) manas¹, buddhi and ahankāra¹ and the fourth, one or more of the ten indriyas1. Buddhi1 and ahankara, in this context, do not stand for what in the Sānkhva literature are called mahat and ahankāra1. Buddhi1 and ahankāra1 referred to in this Kārikā appear to be the sattvika ahankara1 and **buddhi**¹, which with **manas**¹ form the three aspects of antahkarana. They are individual-not cosmic-and catustayasyavṛtti, a mental process in an individual.

catuṣpiṭha चतुष्पीठ (VUV 62), four vital centres. Between six cakras (from mūlādhāra to ājñā), there are these centres. In order to have meditation on sahasrāra, one should first pierce through the three granthis and then attain these four vital centres which are below the sahasrāra. However, the names of these piṭhas have not been mentioned.

candra-1 चन्द्र-१ = śaśi शशि = somamandala सोममण्डल (G 55, 66, GS III 30; HP III 48), one of the nine dhyānasthānas. In G 86 the order in which the three parts of the throat are given is candraghantikālampikā and in 56 candrama is said to be situated in the tālumūla, which is the uppermost part of the throat. Thus the highest part of the throat is candra and the lowest lampikā; ghantikā coming in the middle at the level of the Adam's apple in male human beings. It is most probably a nervous structure and is supposed by GS to secrete a nectar which flows down to the sūrya below and is consumed there. Viparītakaranīmudrā-here standing on one's own head is recommended for preventing this nectar from flowing down to sūrya² in the nābhi.

candra-2 चन्द्र-२ (G 43, 45; GS I 55) the left nostril.

candra-3 चन्द्र-३ (G 43, 44), the moon. The yogī who calls up the image of the moon to his mind in the state of prāṇāyāma² attains bliss. The moon is supposed to be the presiding deity of idā¹ and the somakalājala is obviously nectar, which is supposed to ooze from the moon in the sky. Here it is said to ooze from the candra dhyānasthāna in the body. The ambutattva in the kaṇṭha is described as being of the shape of the 8th (=1/2) moon.

candra-4 चन्द्र-४ (HP III 14), left. For adopting the mahāmudrā pose, first

the anus is pressed with the left heel and the right leg is stretched. Then the pose is repeated pressing the anus with the right heel and stretching the left leg.

candra-5 चन्द्र-५ (YSU VI 70), manas¹which, along with the prāṇas¹ and the indriyas¹, makes up a single organismworks as a whole. cf. drsti³.

candra-6 चन्द्र-६ (VB, VM III 27), moon.
Saṃyama on moon leads one to the knowledge of arrangement of the stars.
candra-7 चन्द्र-७ (VS II 28, 29), the cooling effect (on the body) of the breath that flows through the iḍā (left nostril) is known as candra (moon) because

moon is a symbol of coolness.

candrasthiratva-1 चन्द्रस्थिरत्व-१ (HPI27), stability of candra. Candra is located at the palate and sūrya in the navel. Candra is said to be constantly oozing nectar which is absorbed by the sūrya. Practice of matsyendrāsana stabilises the nectar oozing from candra.

candrasthiratva-2 चन्द्रस्थिरत्व-२ (HP II 78, III 41-2, 63), another interpretation of candrasthiratva refers to the stability of semen. The position of legs in the matsyendrāsana prevents the ejaculation of semen thereby leading to longevity. The term bindu stands both for semen as well as nectar oozing from the candra.

caramadeha चरमदेह (VB IV 7), one who possesses final body, or highest form of the body. A sanyāsī who renounces the fruits of action possesses the highest form of the body. The actions of such a

person can neither be said to be while nor black.

carātmaka चरात्मक (VS V 32), that which is mobile in character. The four signs or rāśis of the zodiac, viz., aries, cancer, libra and capricorn reside on the left side of the human body and they are of mobile characteristics.

carpați चर्पटि (HP I 6), a *yogī* of the haṭhayoga tradition, whose name has been mentioned by *Svātmārāma* in order to offer his salutation.

caladṛṣṭi चलदृष्ट (ATU 6), gaze which is not directed at one point but shifts from point to point. If rays of light appear before a person who, with closed eyes, tries to see something with his caladṛṣṭi, that person also is a yogī (cf. anusandhāna), though the dṛṣṭi is to be made acala (motionless) in the end.

cāndrāyaṇa चान्द्रायण (VS I 54), lunar phase. This is a particular observance which is supposed to be very rigorous (kṛcchra). A person undertaking this religious act consumes food only according to the lunar phases. For instance, on the first day of the lunar phase, he takes only one mouthful of food and so on, he gradually increases the intake of food till the full-moon day; then he reverses the process and starts decreasing the quantity till the newmoon day. This is called kṛcchracāndrāyaṇa-vrata (cf. tapas).

cālana चालन (HP II 32, 113), manipulating. In HP, tongue is to be lengthened by the process of **chedana**

(cutting), **cālana** (moving or rotating), and **dohana** (milking) for the successful practice of **khecarīmudrā**.

cikitsā चिकित्सा (HP V 1, 2), treatment. The erroneous practice of yoga, specially prāṇāyāma causes disharmony in humours leading to several ailments. The fifth chapter of HP (published in the Kaivalyadhāma edition) suggests several ways to treat such ailments (cf. yoga-cikitsā).

cicchakti चिच्छक्ति = paramādevī परमा-देवी (YSU VI 47), one of the five śaktis. This śakti has its seat in the middle of the body (the chest)-not in the middle of the forehead. Jīvātmā also resides here. This is the teaching of YSU.

cit चित् (ATU 2, 13), though ordinarily translated as consciousness, it is very different from what in Western psychology is called consciousness. Though vrtti¹ is not an appropriate word for it, Pancaśikhācārya speaks of a jñānavrtti1, which is implied in every buddhivrtti. Patañjali speaks of purusa's knowledge of the vrttis1 of the citta1 with which it has samyoga. This is a kind of introspection, which may be cit, as it is not a cittavrtti. Brahman is of the nature of cit, sat सत् and ananda. We may or may not know what exactly cit is; but obviously by citsvarūpa and cijjyoti they mean brahman. Though it may not be quite correct to characterise brahman in this way (cf. Advayatārakopaniṣad); for the purposes of having a working idea of

brahman we can say that it is **cit**, which resembles our consciousness, but which is essentially different from it. It is some kind of **jñāna** -not knowledge as we understand this word.

citi चिति = citiśakti चितिशक्ति (YS IV 22, 34; VB I 3, 9, III 35), puruṣa¹.

citimula चितिमूल (VS III 62, 66), upper end of the shins: tibial tuberosity. This is the fourth vital point in the body starting from pādāṅguṣṭha (cf. marmasthāna).

citsakti चितिशक्ति (VB VM IV 34), pure consciousness i.e., puruṣa. Consciousness in itself is not object oriented. When all the evolutes of prakṛti are dissolved in their cause due to the realisation of knowledge of puruṣa, there remains pure consciousness.

citta-1 चित्त-१ (YS I 33, 37, III 1, 9, 11, 12, 19, 34, 38; IV 4, 5, 15-16, 18, 21, 23; VB I 3; TBU I 31, 34, 49), the transmigrating soul. *Patañjali* gives the name citta¹ to the various individuals, which are differentiations in asmitā, the latter being the matter of which the various cittas¹ are the various forms.

Being a pariṇāma, citta¹ is also a mental construct like the other material and immaterial objects and a very convenient one too. Sattva² predominates in it. Citta¹, being the predominant part of the total dṛśya¹, are themselves called dṛśya¹ by Patañjali. Nevertheless, they are parts of the flux that prakṛti is. The ancient Hindu philosophers did not make a hard and

fast distinction between the functions and the structures of the various parts of a human being. Strictly speaking they were right, because their theory is that active prakrti1 is always in motion. (cf. calañcaguṇavṛttam चलञ्चग्णवृत्तम् (VB II 15), All the prākṛta (natural) substances, therefore, have only a vyāvahārika व्यावहारिक (pragmatic) reality. In Patañjali's language, they are parināmas, in SK's terms gunaparināmaviśesas. Their talking of an entity does not always point to a structural ultimate reality. They meant such an entity only when they spoke of puruṣa¹, ātmā² or brahman.

The ancient Indian thinkers generally tried to understand differences of function in terms of different structures. Hence they freely spoke of **indriyas**, **manas**, **citta**, **jīva**, **prāṇa** etc. as if they were entities. In fact, they did not mean it.

The word **citta**¹ in the present context stands for cognitive, affective and conative functions of man woven into a system-the **krama** corresponding to which abides; though it is not permanent like **puruṣa**¹. It is not destroyed with the death of the body; yet it is not **kūṭasthanitya** and is ultimately to be disintegrated.

citta-2 चित्त-२ (YS I 2, II 54, IV 15; GS II 19, III 59-63; G 69-73; TSB 5), only the perceiving, thinking, remembering, imagining, i.e., cognitive part of citta¹-its cognitive aspect. Patañjali's

enumeration of **cittavrttis** clearly shows that they are all cognitive mental processes. G and GS also seem to have used the word **citta²** in this sense.

TSB considers **citta** to be one of the five **aṃśas¹** of **ākāśa** and considers its function to be **anusandhāna**. It is said to reside in **ap** and exist in the form of **ap** by **apānayoga** through the instrumentality of **jihvā**. It is supposed to be *rasaguna*.

citta-3 चित्त-३ (YKUI1, 62, 73, 78; YSU VI 58, 59, 69, 72, 75; HP IV 22), every kind of mental activity-cognitive, affective and conative. According to these thinkers, vāsanā and samīraṇa bring about mental activity. These two can be controlled by mitāhāra, āsana¹ and śakticālana, and through them citta³.

According to YSU, if **vāsanā** is made ineffective by **nādānusandhāna**, all the activities of **prāṇa¹**, **indriya¹** and **citta¹** disappear.

According to *Patañjali*, **cittavṛttis** are controlled by **abhyāsa** and **vairāgya**; and as without a **cittavṛtti** there can be no other **vṛtti¹** of **citta¹**, all the **vṛttis¹** of **citta¹** are controlled by **abhyāsa** and **vairāgya**.

cittadharma चित्तधर्म (VB, VM III 15), characteristics of citta. They are two-fold: visible and invisible. Visible are cognitional and invisible are inferential ones. Vyāsa enumerates seven types of invisible characteristics of citta. They are: (1) restricted state of mind; (2)

virtue and vice; (3) subliminal impressions; (5) change; (6) life; volition, and (7) power. Since their existence is established only by inference they are invisible. nirodhadharmasaṃskārāḥ pariṇāmo'thajīvanam/ceṣṭā śaktiśca cittasya dharmādarśanavarjitaḥ iti// निरोधधर्मसंस्कारा:परिणामोऽथजीवनम्। चेष्टाशक्तिश्च चित्तस्य धर्मादर्शनवर्जित: इति।।

cittaprasādana चित्तप्रसादन (YS, VB, VM I 33), clarity of the mind. This can be achieved through cultivation of friendliness, compassion, joy and indifference towards happiness, pain, virtue and vice. Cittaprasādana has been further explained by Vyāsa as leading towards sāttvika-dharma which makes the mind clear and thereby one-pointed. Vācaspati explains it as undisturbed calmness. VB holds that mind becomes one-pointed and attains the capacity of not losing the state of steadiness (prasannam cittamekāgram bhūtvā sthirapadamabhram śayogyatā m labhata ityarthah प्रसन्नं चित्तमेकाग्रं भत्वा स्थिरपदमभ्रंशयोग्यतां लभत इत्यर्थः).

cittabandhana चित्तबन्धन (TBU I 27), concentration of mind. Brahman alone is here said to be the true object of concentration (mūlaṃ cittabandhanam मूलं चित्तबन्धनम्).

cittabhūmi चित्तभूमि (VB I 1), stages of planes of the mind. They are five: kṣipta (raving), mūḍha (infatuated), vikṣipta (distracted), ekāgra (one-pointed) and niruddha (restrained). Vyāsa considers only ekāgra state of

citta as conducive to the practice of yoga and attainment of samādhi.

cittavikṣepa चित्तविक्षेप (YS, VB I 30, 31), mental distractions. They are also termed as antarāyas (impediments). Vyādhi (diseases), styāna (idleness), saṃśaya (doubt), pramāda (negligence), ālasya (sloth), avirati (lack of detachment), bhrāntidarśana (misapprehension), alabdhabhūmikatva (failure to attain any stage of concentration and anavasthitatva (inability to stay in the stage of concentration).

cittavimukti चित्तविमुक्ति (VB, VM II 27), liberation of citta. The seven-fold intuitive visions (prajñā) have been divided into two groups depending on their nature of achievement-those are: kāryāvimukti and cittavimukti. The latter is the result of the practice of the former. Kāryāvimukti leads to the cittavimukti wherein (1) the entire purpose of the intellect is fulfilled; (2) all the guṇas of the buddhi get dissolved into their own causes; and thereby (3) puruṣa transcends the guṇas and remains in kevalī state.

cittaviśrānti चित्तविश्रान्ति (HP I 32), mental repose. One of the benefits of śavāsana. Concentration of the mind upon breath in śavāsana brings forth the mental repose.

cittavṛtti चित्तवृत्ति (YS I 2), mode of cognitive consciousness, Pramāṇa, viparyaya, vikalpa, nidrā and smṛti are the cittavṛttis according to Patañjali. Since Patañjali includes

dreams and dreamless sleep among the **cittavṛttis**, there is no moment in a man's life when no **cittavṛtti** is going on. In the first chapter of *Yogasūtra Patañjali* has described in great detail the **yoga**⁴ which consists in training the mind so that it can remain, for a longer or shorter period, without any **cittavṛtti** flitting through it. This state of mind is **samādhi**¹ in one sense and the **yoga**⁴ of his first chapter (cf. VB).

cittasthāna चित्तस्थान (VM, VBh I 36), place of citta (mind). The eight-petalled lotus situated in between the abdomen and chest is considered to be the lotus of citta. The same location has also been referred by YS in sūtra III 34. The saṃyama on this particular lotus therefore brings about the knowledge of citta.

cittasvarūpa चित्तस्वरूप (YS II 54), citta¹ as it would be in the absence of any cittavṛtti. Pratyāhāra, according to Patañjali, consists in the indriyas (desires to enjoy) ceasing to function as if they were following the citta² who has stopped functioning. Though these desires cannot arise in the absence of every kind of awareness Patañjali has deemed it fit to speak separately of cittavṛttinirodha and pratyāhāra, which is the nirodha of affections and conations and is said to follow upon cittavṛttinirodha.

cittasamvit चित्तसंवित् (VB, VM III 34), intuitive knowledge of mind. The samyama on hrdaya leads to the knowledge of citta (cf. cittasthāna).

cittāntaragrāhya चित्तान्तरग्राह्म (VB, VM, VBh, IV 21), one citta becoming an object of another citta. This condition will lead to infinite regressions (cf. atiprasaṅga).

citrataranga चित्रतरंग (BY IX 24), lustrous flame. The principle existing in the form of life in the heart of all the creatures is known as viṣṇu who shines like lustrous flame of smokeless fire.

citrā चित्रा (YSU V 27), one of the sixteen principal nāḍīs² according to this Upaniṣad. It is called the nāḍīs of the perineum and its function is said to be secretion of a white liquid.

This $n\bar{a}d\bar{i}^2$ is of special importance for attaining success in $vajrol\bar{i}$, as by $vajrol\bar{i}$ they take the secretion of the $citr\bar{a}$ $n\bar{a}d\bar{i}^2$ upwards and mix it with that of the candra.

cidambara चिदम्बर (DU IV 49), one of the holy places in the body situated in the centre of the heart.

cidrasa चिद्रस (TBU I 51), cetana. One expression used in this *Upaniṣad* is *jñānamayī* ज्ञानमयी vṛtti (47), which is not a vṛtti or the citta¹, but a higher form of consciousness as opposed to vṛttijñāna-another expression used in this text.

While every **vṛttijñāna** is a conscious process in an individual **citta**¹, the $j\tilde{n}\bar{a}namay\bar{i}$ **vṛtti** is universal consciousness which the $yog\bar{i}s$ are said to acquire when they reach the consummation of their **voga**⁴.

- cidātman चिदात्मन् (BY IX 44), of the essence of consciousness.
- cidudaya चिदुदय (SSP I 25), awakening or dawn of consciousness or self-realisation. Due to cidudaya, the consciousness attains five characteristics of sadbhāva, savicāra, kartṛtva, jñātṛtva, and svatantratva.
- cintana चिन्तन (TSM 31, 147), contemplation. Cintana of paramātman is said to be dhyāna in this text. According to G also, dhyāna is contemplation on God.
- cintā चिन्ता (NBU 41, 51; G 76), cittavṛtti. According to NBU, nādānusandhāna implies cessation of all the cittavṛttis. According to G, dhyāna is a state in which there is no cittavṛtti. In that state the citta¹ merges in the one Supreme Reality (ātman²).
- cintya चिन्त्य (TBU I 8; ABU 6), capable of being grasped in some way. **Brahman** is cintya in this sense; though He is sometimes mentioned as acintya, because we cannot form a clear cut concept of Him.
- cinmaya चिन्मय (TBU I 9), of the nature of consciousness, which is not the consciousness of any individual citta¹, but pure consciousness (cetana). cf. cit and cidrasa.
- cinmātra चिन्मात्र (TSM 31), **ātmā**, who is cinmaya.
- culitala चूलितल (YKU II 36), the name of the neck, which point the tip of the tongue can touch when it has been pulled for a long time and made suffici-

- ently long. The $yog\bar{i}s$ who practise **khecari** pull their tongue to increase its length.
- cetana-1 चेतन-१ (SK 55; VB IV 23), conscious. Purusa¹ is said to be conscious. But the consciousness of puruşa¹ is very different from the congnitive, affective or conative consciousness studied by the modern mentalistic psychologists. Words like super consciousness and transcendental consciousness are used for this consciousness. We can see its reflection in what we call self-consciousness and introspection which are the contribution of purusa¹ to purusa². Cetana² purusa¹ is subject to the miseries of old age and the agony of death because of its association with linga1.
- cetana-2 चेतन-२ (VB II 5, 15, 34), conscious in the sense in which we understand this term. VB has divided the sources of pleasure and pain into conscious i.e. sentient being and insentient objects.
- ceatanā-1 चेतना-१ (SK 20; VB II 20), consciousness. According to *Īśvara-kṛṣṇa*, the liṅgas¹ are by nature devoid of cetanā. They appear to be conscious because of their saṃyoga with puruṣas¹, the lone cetanā principle. According to Patañjali, cittas¹ are conscious begins by virtue of sattva² predominating in them. cf. pratyakcetanā.
- cetanā-2 चेतना-२ (BG XIII 6), empirical consciousness manifested in and through body and senses.

ceto'nga चेतोऽङ्ग (BG IX 7), (having) consciousness as component. Jīva has consciousness as its component.

cetomātrasvarūpa चेतोमात्रस्वरूप (BY IX 26), of the nature of pure consciousness. In the interior space of heart, ātman resides which is of the nature of pure consciousness.

cestā चेटा (VB III 15), volition. one of the seven characteristics of the imperceptible mind. Other six are: (1) restricted state of mind (nirodha), (2) virtue and vice, (3) subliminal impressions, (4) change, (5) life, and (6) power (śakti). Perceived mind has only one characteristic of cognition.

caitanya-1 चैतन्य-१ (VB I 9; GS VII 20; ATU 13). VB has called it the svarūpa (own form) of purusa¹ just as one would speak of the beauty of the beautiful. According to GS and others, ātmā² like the Sānkhya purusa is caitanva. But he has no 'consciousness' as this word is understood by the English-speaking people today. His cetana is neither cognition, nor affection nor conation. It is not a process of consciousness. In ATU, caitanya is described as the shining light localised in the sahasrāra, or in the buddhiguhā, or else in the brahmarandhra, which is the sixteenth **ādhāra**. The light seen here is called turyacaitanya by ATU.

caitanya-2 चैतन्य-२ (GS III 39), the waking (roused) condition. The *yogi* rouses his kuṇḍalini i.e., brings it into the

caitanya² state by yonimudrā and then merges his existence into this śakti. This śakti which is there in every human being remains asleep (acaitanya अचैतन्य) so long as it is not roused by yoga⁴.

caitanya-3 चेतन्य-३ (SSP I 48), awareness.
One of the five constituents of internal organs and has the following five characteristics: vimarśa (deliberation), anuśīlana (pursuation), dhairya (courage), cintana (reflection), niṣpṛhatva (desirelessness). (cf. antaḥkaraṇpañcaka).

codaka चोदक (BVU 51), one of the three kinds of ācārya (guru²). This guru² only prompts the disciple and does nothing more. He cannot make his puplis realise the ultimate Reality or Truth.

caurangi चौरंगी (HP I 5), one of the hathayogins falling in the tradition of Svātmārāma. Svātmārāma has enumerated his name in order to give his salutation to him.

cha-छ

chāyā छाया (VU V 41), an obstruction raised inside the body which prevents prāṇa from rising along any nāḍī other than the suṣumnā. Upaniṣad-brahmayogī mentions iḍā¹, piṅgalā and kuhū as those other nāḍīs². Uḍḍiyānabandha raises an obstruction like this. This is why they call it mārgatrayanirodhaka मार्गत्रयनिरोधक (obstructor of three paths).

chidra छिद्र (VB, VM, IV 27; BY II 152),

discontinuity, gap, interval. The continuous flow of the **vivekakhyāti** is disturbed due to the intermediatory occurrences of other notions such as 'I am'. 'It is mine', 'I know' etc., because of the residue of the past subliminal impressions (**saṃskāras**). This discontinuity or gap is known as **chidra**.

chinnapāśa ভিল্ল্ব্যায় (KU 22), bonds cut asunder. Here the pāśa (bondage) refers to the cycle of birth and death.

ja- ज

jagatprāṇa जगरताण (VS III 56), universal prāṇa (cf. mahāprāṇa) that transcends the body, of the nature of void, is eternal, immovable, ether, and is bliss. It is in such a prāṇa one should merge one's self and attain brahmanhood.

jaṅghā जंघा (KU 6, 13), shank, the lower leg from knee to ankle. The two shanks, the two ankles, the two knees, the two thighs, the anus and the genitals, are to properly placed to get into the pose most conducive to raise vāyu² from mūlādhāra to nābhideśa. Marmajaṅghā, therefore, is the kneejoint rather the innermost part of the kneejoint which is probably a nervous structure. It is a band that is to be cut by yoga⁴.

jaṅghāmadhya जंघामध्य (VS III 62, 66) middle of the calf. Traditionally, jaṅghā means thigh and jaṅghāmadhya denotes middle of the thigh. But according to the measurements of the distance that *Vasiṣṭha* has provided for the location of this point, jaṅghāmadhya means 'middle of the calf'. It is ten fingers above the ankle and thus is the third vital point in the body.

jaṭharāgai जठरानि (GS I 19, II 30) gastric heat, probably the chemical changes inside the stomach which generate heat and help digestion. Agnisāra, śuṣkabasti, mayūrāsana and all the mudrās promote gastric combustion.

jaḍa जड (TBU I 20), the incompetent action-organs like speech (cf. *Upaniṣadbrahmayogī*), which cannot express **brahman** by word or deed. These organs are, therefore, to be silenced. Silence in this sense is to be practised by the *yogīs* as a **yogāṅga** here called **mauna**.

jana जन (BY III 20), living beings are born again at the time of new creation. Therefore, they are called jana (jāyante tu punaḥ sarge जायन्ते तु पुनः सर्गे.)

janana जनन (SK 12), producing, causing to arise. Janana is one of the four vṛttis of the guṇas, the other three being mithuna, abhibhava and āśraya. According to this text, any vṛtti¹ of one guṇa¹ can produce the vṛtti¹ of another guṇa just as two of them can coalesce to form a third vṛtti¹. The former process Īśvarakṛṣṇa calls janana, the latter mithuna vṛtti¹ of guṇas¹.

The meaning seems to be that, though all the three guṇas¹ are present everywhere, each krama of the guṇas goes by the name of the guṇa¹ which predominates in it. E.g. the kramas corresponding to cittas are called sattva because sattva predominates in

them. If a cittavṛtti prompts a bodily activity this would be the janana of rajas¹ by sattva². Īśvarakṛṣṇa seems to believe that after janana the new vṛtti¹ is different from the parent vṛtti¹ in the sense that the predominant guṇa¹ is the parent vṛtti¹.

janasanga जनसंग (HP I 15), public contact. One of the six disturbing factors in the path of hathayoga. Yoga practice gets futile by too much public contact. Hence it is to be avoided.

janasaṃsada जनसंसद (BG XIII 10), group of people. Here it means ordinary, unenlightened and indisciplined people. Keeping away from such people is recommended for a yogasādhaka (cf. janasaṅga).

janoloka जनोलोक (VB III 26; NBU 4, 16), fifth of the seven *bhuvanas* भुवन mentioned by VB. **Brahmapurohita**, **brahmakāyika**,

brahmamahākāyika and amara are the classes of gods who reside there. For NBU it is one of the six higher regions above the earth. By those who imagine the universe as a haṃsa, janoloka is imagined in the heart of the swan. If a mantrayogi मन्त्रयोगी dies while he is at the tenth mātrā¹ (dhṛti) of the praṇava, he is born in this region of the universe.

janma जन्म (KU 20; YS II 12, 39, IV 1), birth. If the **suṣumnā** is successfully cut by the **manodhāraṇā** prescribed in KU the *yogī* who succeeds in doing this, is not born again. **Janmakathantā** (YS II 37) means ail about the 'how' and 'why' 'of one's present birth (-life). janmakathantāsambodha जन्मकथन्ता- सम्बोध (YS II 39), keen curiosity about the why and how of our life here, which arises when aparigraha becomes an integral part of a yogī's mental constitution. According to VB, it is ātmabhavajijñāsā आत्मभविज्ञासा (curiosity to know about oneself).

janmādikāraṇa जन्मादिकरण (VS VI 8), cause of birth and liberation. *Sat*, **praṇava** or **om** is regarded as the cause of birth and liberation.

japa-1 जप-१ (YS I 28; TSM 34; DU II 12-16; SAU I (2) 1, 10), repetition of the sacred mantras³, of which *Patañjali* mentions only om. According to TSM, japa is one of the ten tapas, which are obviously niyamas¹; because their enumeration follows that of yamas¹ and is followed by a description of āsanas¹.

But the seer of the *Upaniṣad* has not called them **niyamas**¹, probably because this word could not be made to fit in the metre.

It appears, however, that TSM has used all the names of *Patañjali's* yogāṅgas in a double sense. In one sense, e.g., there are the ten niyamas³ enumerated in 33-34, but in another sense devotion to Absolute is niyama². According to DU and SAU, japa is of two types, viz., vācika (of the nature of words) and mānasika मानसिक (of the nature of the psyche). Vācika japa is further divided

into two classes, viz. upāṃśu and uccaiḥ. Mānasa also is of two types, viz. only in manas and in dhyāna state of manasa. By SAU, japa is defined as the repetition of a mantra which does not go contrary to the Vedas and is imparted by the guru² in the prescribed manner.

The **mānasa** variety is considered to be more effective by this text than the **vācika** one.

japa-2 जप-२ (VS I 64, 65), repetition of mantras, one of the ten niyamas. Chanting of mantras in a prescribed manner is japa. Japa is said to be three-fold: uccaih (recited loudly), upāṃśu (muttering) and mānasa (mental recitation). Upāṃśu is thousand times better than uccaih and mānasa is still thousand times better than upāṃśu.

japayajña जपयज्ञ (BY VII 55), sacrifice in the form of japa. Devotees of Vedas are advised to recite gāyatrī-mantra while facing the sun with auspicious attitude (śivasaṃkalpa). This is performed with the help of bibhrad-anuvāk बिभ्रद् अनुवाक् and puruṣasūkta पुरुषसूक्त etc.

jaya जय (NGB III 5), achievement of stability. After the achievement of stability in saṃyama, a consciousness of samādhi dawns in the sādhaka.

jayā जया (VS II 39), name of a nāḍī.

Vasiṣṭha simply refers to the name of this nāḍī but he has not included it among the fourteen important nāḍīs enumerated by him. This nāḍī is

located in the left side of the body (savyabhāge jayā jñeyā सन्यभागे जया ज्ञेया)(cf. nāḍi).

jala जल (VB III 14), ap.

jalabastikarma जलबस्तिकर्म (HP II 29), one of the six purificatory processes described by Svātmārāma. Assuming utkaṭ āsana in the water coming upto the navel and inserting a tube in the anus, one should contract the anal sphincters in such a manner that the water enters the colon (cf. HP II 27). This practice washes the interior of the colon thoroughly, therefore, it is considered a purificatory process. The practice of jalabastikarma invigorates the humours and the sense-organs, bestows lustre and stimulates digestion.

jāgara जागर (VU II 60), the wakeful state.

Brahman is said to be beyond wakeful state since it is devoid of change and the like.

jāgrat जाञ्रत (YCU 74, 82; VU I 6, IV (1) 6-10), the waking state. For YCU jāgrat is one of the four avasthās of the living being probably reference is to man), the other three being svapna, suṣupti and turīyā. Of these the enjoyer (= experiencer) of turīyā alone is oṃkāra.

In these four avasthās man presents four different kinds of phenomena. The activities of the jāgrat avasthā are sthūla (concrete), those of the svapna avasthā pravivikta স্বিবিক্ (abstracted). The suṣupti avasthā consists of ānanda (bliss) and the turīya of com-

plete jñāna (illumination-realization). According to VU, jāgrat is one of the three avasthās viz. jāgrat, svapna and suṣupti. The thirtysix tattvas mentioned in I 7 of this text will not however, be complete if there are only three avasthās.

In IV (1), 6-10 this *Upaniṣad* also speaks of four **avasthās**. **Jāgrat** is here the first state of each phase of **jīvanmukta's** life. These phases are called **bhūmis** in this text.

jāti-1 जाति-१ (YS II 13, 31 IV 2, 9), a particular life. Jātyantarapariņāma is passing from one life to another and jātivyavahita जातिव्यवहित means 'being in a different life.

Being born as a particular individual in a particular situation (= environment) is one of the **vipākas** of **karmāśayas**, the other two being **āyu** and **bhoga**.

jāti-2 जाति-२ (YS III 53), species (= quality). Two fruits, being of the same quality (species), name, shape, size etc. and thus indistinguishable, can be distinguished by vivekajñāna.

jānu जानु (HP I 19; VS III 67), knee. One of the eighteen vital points in the body (cf. marmasthāna).

jālandhara जालन्थर (G 32, 36; HP II 45, III 69-71; GS III 10, 11, 15, V 59, 70; YTU 26, 119; YCU 45, 50, 51; SAU I (7) 11; DBU 78; YKU 41, 51; YSU I 103, 111, V 39), one of the important bandhas⁵ which if a *yogī* masters, attains success in *yoga*⁴. It consists in constriction of the throat by touching

the chest with the chin. When the jālandharabandha is clamped, pīyūṣa (nectar) does not flow down to agni and the yogī does not suffer from any vāyudoṣa. The somakalājala oozing in the somamaṇḍala is retained there.

YCU and DBU claim for this **bandha** that it prevents the secretions of the brain from flowing down below the throat. This cures the diseases of the throat and prevents the **kuṇḍalinī**¹ (**marut**) from dropping again to the **ādhāra**¹ from where it had risen.

This bandha forms a part of bhadrāsana, siṃhāsana, mahābandha as well as of sūryabheda and ujjāyī varieties of kumbhaka¹. Many texts prescribe this bandha after the pūraka¹ phase of prāṇāyāma² so that the breath may not escape.

YSU declares that by a regular daily practice of $j\bar{a}landhara$ the $yog\bar{i}$ achieves $v\bar{a}yujaya$ and advises blocking the throat by pressing the chin against the chest with force.

YTU considers this **bandha** to be one of the twenty members of **haṭhayoga**. cf. **kaṇṭhamudrā**.

According to YKU, straightening the back while the throat is blocked by this bandha makes the prāṇa² enter the suṣumnā.

jijñāsu जिज्ञास् (BG VII 16), the seeker of knowledge. One of the four kinds of the devotees of God. Others are: (1) ārta, (2) arthārthī and (3) jñānī.

jitavāyu जितवायु (VS IV 58), one who has conquered prana through the practice of prānāyāma (cf. prānajaya, prānāyāma). One of the essential means for the attainment of samādhi. jitātman जितात्मन् (BG VI 7), one who has conquered one's self. A man who has subdued the aggregate of the body and the senses and has attained the tranquillity of mind renouncing all the fruits of actions is known as jitātman. jitendriya जितेन्द्रिय (TBU I 3), a person who has no desire whatsoever for things enjoyable through the senses. Such are those who realise brahman (the One Supreme Reality). cf. indriya.

jihvā জিল্লা (TSB 5, 9; VB III 9), one of the five aṃśas¹ of vahni. Citta is said to reside in ap and exist in the form of ap by means of jihvā. According to VB and other texts on ancient Indian psychology, jihvā is the sense of taste, ordinarily translated as tongue. Like the names of the other sense organs, it is a name given to a part of the body as well as to that subtle sense which transmigrates with the transmigrating soul.

jihvāmūla जिह्नामूल (VS III 71), the root of the tongue, the thirteenth vital point in the body (cf. marmasthāna). Its location is four fingers above the jugular notch (cf. kaṇṭhasthāna).

jihvāśodhana जिह्नाशोधन (GS I 26, 29), one of the three kinds of **dantadhauti**. The index finger, the middle finger and the ring finger are introduced in to the

throat and the impurity of the tongue rubbed out. If the tongue is slowly rubbed in this manner every day, **kaphadoṣa** is warded off.

jīva-1 जीव-१ (YCU 73, 84), living being also called jīvātmā as opposed to ātmā (= paramātmā = brahman). Jīva is bound by the indriyas¹ and has mamatva ममत्व (sense of ownership). Paramātmā has none of these bondages. Jīva repeats the so'ham mantra to achieve brahman, the Lord, the One Supreme Reality.

jiva-2 जीव-२ (YCU 90; G 25-8; GS V 79; VB III 39), life. So long as there is no expiration, YCU and GS declare, life does not cease. Hence nobody can die in the state of ābhyantara-kumbhaka¹. The theory seems to be that the last act of respiration must be an exhalation.

G considers that the ten **vāyus** take the form of **jīva** and VB considers that the combined function of the **indriyas**¹, which itself is of the nature of the five **vāyus** takes the form of **jīva** (the living being). According to G, while **jīva**¹ can be taken to correspond to *Patañjali's* **citta**¹, **jīva**² is only life. cf. **citta**.

jīva-3 जीव-३ (SSP I 54), individual self.

This individual self has been described as having five states of consciousness-jāgrat, svapna, suṣupti, turīya and turīyātīta.

jīvajāti जीवजाति (G 5), species of the creatures. *Gorakṣa* considers that there are as many number of **āsanas** as there

are species (i.e, eightyfour lakhs in number).

jīvanmukta-1 जीवन्युक्त-१ (YSU I 47, 159; YKU III 33-4; MBU I (4) 3, II (3) 7, (5) 2; VU I 16, IV 1, V 76; TBU IV 1-32), a person who has realised brahman and experienced the state of perfect ananda (bliss), pure and free from all duality. Such a person may live for some time remaining perfectly unattached to anything in the world. According to YSU, a jīvanmukta is the person who is truly and wholeheartedly devoted to the anāmaya (= viṣṇu = brahman), who is other than the ninety-six tattvas³, and who has shed all ignorance and its consequences. Jīvanmukti (liberation while alive) is here said to have four stages of its own. It starts when the vogi realises his true self, that he is brahman. At the second stage this realisation gets unmistakably established. At the third stage jīvanmukta ceases to perceive objects as objects and at the fourth stage belief in absolute monism becomes his second nature. Then brahman pervades the jīvanmukta as sky, or water pervades a pot empty in wide space, or filled with water in the ocean. These stages form a continuum of which the members merge one into the other. No hard and fast line being drawn between the two adjacent members; i.e., the difference between the two adjacent stages of jīvanmukti (liberation while alive) is imperceptible as is the

difference between the adjacent colours of the solar spectrum. All the stages together make up a single whole.

jivanmukta-2 जीवन्मुक्त-२ (YTU 106), a state of samādhi which ensues on a successful dhyāna of nirguṇa (not with the guṇas) brahman. On attaining this state, of the yogī wishes to leave the body, he can do so and become finally mukta.

jīvanmukti जीवनमुक्ति (NGB II 2), emancipation while alive. When kleśas are attenuated due to the practice of kriyāyoga, there sets in the flow of discriminative knowledge (cf. vivekakhyāti) which culminates into realisation. This realisation renders the kleśas too impotent to act like the seeds that are burnt in fire and rendered impotent enough to sprout any more. Such a state of man is called a state of jīvanmukti (cf. paramamukti).

jīvabhrāmaka जीवभामक (VBh I 5), cause of the transmigration of jīva. It is due to the impressions of modifications of citta that the jīva transmigrates from life to life.

jīvābhidhā जीवाभिधा (YTU 11), jīva¹ so called. In fact, jīvātmā is paramātmā. That paramātmā is called jīva¹ when ahaṅkṛti arises in Him as a wave arises in water. Then He adopts a body made up of the five mahābhūtas (elements) organised in to the seven dhātus and subject to sukha and duḥkha. This body is guṇātmaka (of the nature of guṇas)

while **paramātmā** is **guṇātīta** (beyond the **guṇas**) but when connected with a body he is called **jīva**¹.

jīveśvara जीवेश्वर (ATU 3), jīva¹ and iśvara as two, as distinguished one from the other. This distinction is, however, unreal. In fact there is only one reality-the brahman.

jṛmbhaṇa जृम्भण = vijṛmbhaṇa বিजृम्भण (GS V 64, 65), yawning. The sphere of action of the **devadatta vāyu** is yawning. It is by virtue of this nervous (autonomic) function that we yawn.

jaivatanmātra जैवतन्मात्र (TSB 7), the tanmātrā in the sensory cells of a sense organ. In every sense organ, according to G and TSB, there is a tanmātrā corresponding to the one in the object outside, which stimulates the jaivatanmātra. This is why there is an adequate stimulus for each sense organ.

jña র (SK 2), puruṣa¹, which is one of the three things to be known for complete eradication of misery, the other two being vyakta and avyakta.

jñātā ज्ञाता (TSB 8), he who knows. It is a component of the human being which is not included in this text among the aṅgas¹. Only twelve aṅgas are mentioned-five limbs of the mechanism of action and five of that of cognition.

Jñātṛtva which is said to be the function of antaḥkaraṇa, not being behaviour in any sense, the jñātā antaḥkaraṇa is not an instrument of any kind of behaviour-knowing, feeling or acting. This is why it is not included among the aṅgas¹.

jñātājñāta ज्ञाताज्ञात (YS, VB, VM, VBh IV 17), known and unknown. The objects that are said to be known are those which affect the mind-stuff and those that do not afffect are said to be unknown.

jñātṛtva ज्ञातृत्व (TSB 9), antaḥkaraṇa.
AS a constituent of the human organism it is the self and is not included by this text among the twelve aṅgas.

jñāna-1 ज्ञान-१ (SK 23, 44, 64; YS III 54, IV 31), supreme realization nāsmi नास्मि, na me न मे, nāhaṃ नाहं (neither I, nor mine, nor me) as a bhāva, which an aspirant with jñāna² develops in course of time, and which brings apavarga to him. Īśvarakṛṣṇa posits a causal connection between jñāna and apavarga; but since according to him, rāga perpetuates saṃsāra, virāga is also necessary for gaining apavarga.

What *Īśvarakṛṣṇa* calls **jñānabhāva**, *Patañali* calls **vivekakhyāti**. Besides bringing omniscience, **jñāna** leads the person blessed with it to **kaivalya**. Hence *Patañjali* calls it **tāraka**.

jñāna-2 ज्ञान-२ (SK 69), systematic knowledge which an aspirant can obtain by testimony. Such a knowledge is contained in the Kārikās. It was imparted by the sage Kapila to Āsurī for the benefit of puruṣas². It was revealed to the sage Kapila, but to the student and the person desirous of obtaining release from suffering it is now available in the form of testimony. The view that, practice of yoga as samādhi¹ is essential for the vijñāna,

does not therefore seem to be acceptable to \bar{I} *śvarakṛṣṇa*.

jñāna-3 ज्ञान-३ (YS III 16-19, 22, 25-9, 35, 52), correct knowledge which is obtained by saṃyama.

jñāna-4 ज्ञान-४ (YS I 8; TSB 6), ordinary knowledge gained by any of the **pramāṇas** which unlike jñāna¹⁻²⁻³ may be true or false. TSB considers it to be **viṣaya** of **antaḥkaraṇa**.

jñāna-5 রান-৬ (HP IV 60), awareness of objects. HP identified this awareness of objects, i.e., knowledge with the mind because it is had in and through mind. It is maintained that in order to attain unmanī state both the awareness of objects (mind) and objects themselves need be transcended.

jñānakarmasaṃyoga ज्ञानकर्मसंयोग (BY IX 28), synthesis of knowledge and action. This is the essential condition to realize the highest puruṣa. The puruṣa cannot be attained by separating these two hence one should resort to both of them.

jñānadīpti ज्ञानदीप्ति (YS II 28), knowledge leading to the realization of Truth. The truth to which all the Sāṅkhya philosphers, including Patañjali refer is that puruṣa¹ is an entity absolutely different from all that is prākṛta (of prakṛti¹), including the citta¹. As a yogī progresses in his mastery of the yogāṅgas he gets more and more of the knowledge leading to a realization which Patañjali calls vivekakhyāti.

jñānanetra ज्ञाननेत्र (ABU 21), eyes of

wisdom. It is only through the eyes of wisdom one can perceive **brahman**.

jñānayoga ज्ञानयोग (TSM 23, 27), one of the two ways in which the mind can be set in the right direction and withdrawn from distracting objects, the other way being karmayoga. Unswervingly fixing of the mind on the highest good is jñānayoga. Prescribing the attainment of karmayoga and jñānayoga simultaneously, as is done here, is a characteristic of smārta स्मार्त (of smṛtis) literature.

jñānavṛtti ज्ञानवृत्ति (VB II 20, IV 22), introspection of cittavrttis by purusa1. Pañcaśikhācārya, whom Vyāsa has quoted, ascribes jñānavrtti to puruşa¹, but this Sānkhya philosopher does not consider it to be another vrtti running parallel to the cittavrtti which it knows. It is nothing like a cittavṛtti or action. It is a knowledge of its own kind. The idea is that purusa1 is not the knowing subject of which the objects of knowledge are cittavrttis as a citta² is of the object which it knows. The citta4 undergoes a change with every bit of its experience. Puruşa² never does this. There is only one never changing puruşa1 who knows not only one of the vrttis of the moment at a particular moment, but all of his citta1 vrttis at all times. Jñānavṛtti is not a puruṣa's1 experience at this time or that.

jñānaśauca ज्ञानशौच (DU I 22), purification through knowledge, a synonym for

mānasa-śauca. Śauca, one of the ten yamas, is of two types: bāhya and mānasa. Bāhyaśauca consists in purifying the body through clay and water whereas mānasaśauca or jñānaśauca consists in the realisation of oneself as pure. The latter is superior to the former.

jñānāgni ज्ञानाग्नि (BG IV 37), fire of wisdom. It is the wisdom through which actions are rendered impotent.

jñānendriya ज्ञानेन्द्रिय (TSB 6), śrotra. tvak, cakṣu, jihvā and ghrāṇa are here said to be the five aṃśas¹ of vahni. Their viṣayas are śabda, sparśa, rūpa, rasa and gandha.

jñeya जेय (HP IV 60), object of empirical knowledge. Everything that is seen and experienced through senses and mind is called the 'known'.

jyoti-1 ज्योति-१ (GS V 77), light. While performing nāḍiśuddhi the yogi meditates on vāyubija, accompanied with light, at the time of inhaling with the candranāḍi (left nostril) and on the avani tattva and light accompanied with the repetition of vahnibija, at the time of inhaling with the sūryanāḍi (right nostril).

jyoti-2 ज्योति-२ (GS VI 1), jyotirdhyānaone of the three forms of dhyāna, the other two being sthūla and sūkṣma. This dhyāna brings success in yoga⁴ and leads to self-realization.

Tejodhyāna is said to be a hundred times superior to **sthūladhyāna**. In this **dhyāna** while the $yog\bar{i}$ is meditating,

he sees a light and fixes his mind on that. The light which the $yog\bar{i}$ sees is an inner light and not a light outside which he can perceive. This light is neither, strictly speaking, an image nor a percept. It is an image only in so far as it is independent of retinal stimulation. but it lacks characteristics of an image; viz., flicker flow, unsteadiness independence of spatial relations. It is steady like a percept but much more vivid than an ordinary perceived light and it is localized, ordinarily in the yogi's head.

A yogī who is successful in **bhrāmarī kumbhaka** hears certain inner sounds which blend with the light that he sees; and the yogī's mind is fixed on this blend. Thus the sound, the light and the knowing mind become one (cf. Patañjali's svarūpaśūnyatva स्वरूपशून्यत्व arthamātranirbhāsatva अर्थमात्रनिर्भासत्व (YS I 43) and tatsthatadañjanatā तत्स्थत- दंजनता (YS I 41).

jyoti-3 ज्योति-३ (BY IX 107-8), lustre of puruṣa. Bhūḥ, bhuvaḥ and svaḥ refer to the jyoti in the sun which has the form of agnihotra in the orb of puruṣa.

jyotirmayūkha ज्योतिर्मयूख (ATU 6, 11), ray of light. Rays of light are seen by the person who tries to fix his mind on the space in front of him. Yogīs are advised to meditate on the big ray of light seen in the front part of the root of the upper palate. This would be a superior samanaska समनस्क tārakayoga.

jyotirlinga ज्योतिर्लिग (BVU 80), one of the three points for having meditation on. Other two being ātmalinga and adholinga. Jyotirlinga is situated in the middle of the brows.

jyotismati ज्योतिष्मती (YS, VB, VM I 36; VB III 25), luminous (sense activity). One of the conditions to attain stability of mind. The sattva-intelligence is luminous and all-pervading like ether. The consciousness of intellect which arises on concentrating on the lotus of the heart assumes the brilliance, luminosity which further leads to steadiness of mind. Through the luminous senseactivity of the mind, the yogī knows the subtle or veiled or distant object by directing the sense activity towards them.

jvalana-1 ज्वालान-१ (G 46), fire. The **ādityamaṇḍala** of G is a mass of flames of burning fire. If, while performing **prāṇāyāma**², yogī sees it in the navel region inside his body and meditates on it, he enjoys bliss.

jvalana-2 ত্ৰলন-২ (YS, VB, VM III 40), radiance, effluence, aura. By conquering samāna-vāyu through the practice of saṃyama, yogī's body shines with aura or becomes radiant.

jvalanti ज्वलन्ती (VU V 29), according to this text, one of the four nāḍis² which are situated inside the spinal column in the navel region.

jvālā ज्वाला (TSM 127), flaming fire. This is an image seen by a *yogī* two days before his death while there is no fire actually burning before him.

jha-झ

jharjhara झर्झर (GS V 75), cymbals-a pair of concave plates of metal used as a musical instrument. A sound like that of this instrument is heard by the *yogī* who is successful in **bhrāmarī** kumbhaka¹.

jhillikānāda झिल्लिकानाद (GS V 74), sound like the high-toned chiring of a cricket. It is one of the internally aroused sounds which a *yogī* hears in his right ear while performing **bhrāmarī** kumbhaka¹.

ta-ट

tiṇṭiṇi दिण्टिणी (HP I 8), name of a siddhayogi, one of the thirty-three siddhayogins enumerated by Svātmārāma to pay his salutation to all those siddhayogis.

tha-ਰ

thaṃ ở (GS V 43), the bījamantra which is to be recited while meditating on the moon. In the process of nāḍīśuddhi, preparatory to prāṇāyāma², the yogī repeats this mantra² sixteen times while inhaling.

ta-ਜ

tat तत् (BY IX 41), tat refers to that entity which should be known always by the learned and which becomes clear by calling the word 'tat'.

tattva-1 तस्त्व-१ (VB II 19; GS III 60), guṇaparva. A new tattva appearing in another tattva is called tattvāntarapariṇāma by Vyāsa. GS uses this word for the viśeṣa guṇaparva-the five mahābhūtas one of which is ambu (=ap).

tattva-2 तत्त्व-२ (G 71-72, 89-90), ātma² which is the ultimate principle and the One Supreme Reality. According to G, worldly knowledge is one thing and realisation of tattva another. The former is vitiated by upādhi; the latter is quite free from it.

tattva-3 तत्त्व-३ (VU I 17), According to this Upanisad, some authorities speak of twentyfour tattvas, ten indrivas1 five prānas1, five visayas4 and four antahkaranas. Others add five mahābhūtas, three śarīras, and four avasthās-and thus raise the number to thirtysix. Still other swell the number of tattvas to ninetysix by including six ways of existence, six infirmities like hunger and thirst, six kośas, six enemies-kāma, krodha, lobha, moha, raga and dvesa-three purusas, three gunas¹, three karmas, five kāryas, four functions of the four antahkaranas, four bhavanas, thirteen gods, and one sāksī īśvara.

tattva-4 तत्त्व-४ (SS I12; HP IV 59; G 70), synonym for the Higher Self, i.e. brahman. G also uses the term tattva to refer the Soul. According to HP, the mind gets absorbed in tattva, i.e. brahman as a result of the practice of nādānusandhāna.

tattvajñāna तत्त्वज्ञान (HP I 16; GS I 2), the real knowledge. 'Brahman alone is real'-is the real knowledge (tattvajñāna). One of the six essential conditions for getting success in yoga. The practice of **ghaṭasthayoga** leads one to the knowledge of reality.

tattvasevana तत्त्वसेवन (MBU I (2) 1, II (1) 2), probably the same as ekatattvā-bhyāsa of Patañjali, who prescribes it for controlling śvāsapraśvāsa etc. But here it is prescribed for overcoming nidrā (sleep), though niḥśvāsa is also mentioned as a doṣa (disorder) of deha (the body).

tattvākāśa तत्त्वाकाश (ATU 7; MBU I (II) 13), ākāśa of verity. Due to intermediatory perception (madhyalakṣya) there ensues five types of ākāśa. Tattvākāśa is one of them. Others are: guṇarahitākāśa, paramākāśa, mahākāśa, and sūryākāśa.

tatstha तत्स्थ (YS I 41), the subject (= grahītṛ). It is the subject of ordinary cognitive consciousness-the citta¹ which merges in its object (grāhya) when the cittavṛttis disappear and samāpatti ensues. Patañjali has chosen to use the word tatstha for the subject and tad for the object, instead of repeating the words grahītṛ and grāhya.

tanu-1 तनु-१ (YS II 2, 4), one of the four forms in which the **kleśas** exist. It is the attenuated condition of a **kleśa**. In this condition the **kleśa** is not sufficiently strong to disturb peace of mind.

tanu-2 तनु-२ (SS I 69), the body. A *yogi* or *yogini* who has realised that the whole world is **māyā**, has no interest in his or her body, wealth etc.

tanumānasī तनुमानसी (VU IV (1) 3, (2) 1, 5), functioning with the refined mind. Third stage of knowledge in the sequence of seven stages of knowledge. The other six stages are: (1) **subhecchā** (virtuous desire), (2) vicāraņā (investigation), (3) sattvāpatti (attainment of the rhythmic state), (4) asamśakti (detachment), (5) padārthabhāvanā (conception of the substance, of the brahman), and (6) turīya (attainment of the turiya state). Among these sevenfold stages of knowledge, the last four have been conceived as the fourfold character of a jivanmukta. Till the third stage, one remains a seeker for liberation. Wherein passionate attachment to objects of sensual pleasure gets atttenuated as a result of investigation and virtuous desire, that is called functioning with the refined mind.

tantu-1 तन्तु-१ (KU 9), the fine thread by which the spider climbs up and down. Suśumnā is compared to the spider's thread, because prāṇa² is supposed to travel up along the suṣumnā. Prāṇa¹ is thus compared to a spider here.

tantu-2 तन्तु-२ (KU 24), suṣumnā which is one of the tantu¹-like structures in the body.

tantra নন্ম (SK 70), knowledge leading to Supreme Realization. The basic ideas of *Kapila* about this knowledge are said to have been elaborated by *Pañca-śikhācārya*.

tanmātra तन्मात्र (VB I 45, II 19, III 44,

IV 14; SK 24-5, 38; TSB 3, 6, 7), the infra-atomic potential which marks a comparatively less differentiated level of the material part of nature in relation to the mahābhūtas which are a further differentiation in it. There are five tanmātrās; viz. śabda, sparśa, rūpa, rasa and gandha in which the atom of the five mahābhūtas (= elements) are differentiated. By careful analysis we find that the atoms of the mahābhūtas are tanmātrās in a concrete form.

Thus a paramāṇu (= atom) is made up of tanmātrās; i.e., the tanmātrās are its constituents (cf. VB).

According to SK, in ahankara1 stand out the five tanmātrās and the eleven indrivas1 which form the bhautika (material) and aindri (immaterial) sargas respectively. The five tanmātrās are said to arise in what Īśvarakrsna calls bhūtādi, whlie the indriyas¹ are supposed to arise in vaikṛta (immaterial) ahankāṛa1. Tamas predominates in the tanmātrās. Rajas takes a hand in the production of both indriyas1 as well as tanmātrās. Sattva² predominates in vaikrta ahankāra1. Being aviśesas, the tanmātrās cannot be perceived by laymen, they can be known by the scientist as a result of his scientific research, or by the $yog\bar{i}$ by performing samyama on them. With the exception of the concrete individual objects and living beings, everything that exists is capable of being known either by scientific investigation or samyama. The tanmātrās, however, have an important psychophysical value. TSB makes a distinction between tanmātrās and jaiva tanmātrās and considers śabda, sparśa, rūpa, rasa and gandha to be the visayas of jñānendriyas and avakāśavidhūta अवकाशविधृत darśana, pindīkaraņa and dhāranā to be those of the jaivatanmātrās. In other words, the jaivatanmātrās are stimulated by the active principles in śabda, sparśa, rūpa, rasa and gandha, which the jñanendrivas sense. These five names thus apply to (1) the five cosmic tanmātrās, (2) the five jaivatanmātrās, (3) the five jñānendriya viṣayas, and (4) the five principles in them which stimulate the five jaivatanmātrās.

G also speaks of tanmātrās in the sense organs. This hypothesis admirably explains why the adequate stimuli for the different sense organs are different. Each tanmātrā in the external object acts on its counterpart in the sense organs. The objects stimulate the sense organs by virtue of a mutual affinity, between the tanmātrā which predominates in them and the corresponding jaivatanmātrā in the sense organ.

tapa-1 तप-१ (VBh II 1), austerity. It consists of practice which is unopposed to developing clarity of mind. According to VBh, the beginningless subliminal impressions coming from action and

affliction which is known as $p\bar{a}pa$ (demerit) is variegated and it cannot be weakened without the help of the austerity besides the other various means.

tapa-2 तप-२ (BY III 21), this is in relation with the abode of tāpasa-persons. The accomplished ascetics like *Sanaka* and others reside here. Hence it is called tapoloka.

tapa-3 নঘ-২ (VS I 54), austerity. This austerity consists in purification of the body by a perscribed means such as kṛcchracāndrāyaṇavrata কৃচ্ছ্যু বাদ্র্যাপ্রন. This is one of the ten niyamas enumerated by Vasiṣṭha.

tapa-4 तप-४ (VU V 13; SAU I (2) 1, 2; DU II 1, 3-4; TSM 33; YS II 1, 32; VB II 32; YSH IV 88-91, 93), one of the ten niyamas³. Tapa is the attitude which the yogīs are advised to adopt towards their physiological needs, viz. these are to be endured and not to be appeased by being satisfied. As a part of kriyāyoga, tapa attenuates the kleśas, and, as a yogāṅga, it removes avidyā and brings about undisturbed peace of mind.

According to SAU, **tapas** consists in depriving the body by fasts like *kṛcchra* কৃচ্ছু and **cāndrāyaṇa**.

According to DU, people who know the significance of the questions like what **mokṣa** is and how and by whom the **saṃsāra** is created take resort to **tapa**. According to YSH, **tapa** purifies a **jīva**¹ as fire purifies gold.

tapoloka तपोलोक (NBU 4, 16; VB III 26), sixth of the seven **bhuvanas** भ्वान (worlds) mentioned by VB. The gods ābhāsvarāḥ, mahābhāsvarāḥ and satyamahābhāsvarāḥ, live here.

According to NBU, it is one of the six higher regions above the earth (cf. janoloka). If a mantrayogi मन्त्रयोगी dies while he is at the eleventh mātrā¹ of the praṇava (om) he is reborn in tapoloka. This loka is imagined in the throat of the haṃsa (swan) which is the symbol of the One Supreme Reality (brahman).

tamas-1 तमस्-१ (SSP I 52), one of the five components of kulapañcaka. Other four are: sattva, rajas, kāla and jīva.

Tamas has been described as having the characteristics of vivāda, kalaha, śoka, bandhana and vañcana.

tamas-2 तमस्-२ (VB I 8; SK 48), Vyāsa and Īśvarakṛṣṇa think that tamas² is another name for the mother-instinct avidyā. SK considers it to be of eight kinds.

tamas-3 तमस्-३ (VB II 18; SK 13, 54; TBU I 41; TSM 8), one of the three well-known guṇas¹, the other two being sattva² and rajas¹. The characteristics of this guṇa¹ are said to be inertia, grossness, and prevention of knowledge. It is supposed to retard movement, that rajas is supposed to start and promote, and to cause obscurity and thus obstruct knowledge, which sattva² is supposed to bring about.

Tamas² is thus the material aspect of **prakṛti**¹ (nature), of which the other two aspects are energy and mind. Probably **tamas**² is to mind what **ālasya** (= no inclination for work) is to body. TBU considers it to be one of the nine obstacles in the way of **samādhi**¹. cf. **guna**¹.

tarka-1 तर्क-१ (ANU 6, 16), one of the six constituents of yoga⁴. In this text Patañjali's yama, niyama¹ and āsana¹ are omitted and tarka is added as a yogāṅga. Thus there are only six yogāṅgas.

All the same, $\bar{a}sana^1$ is prescribed for the practice of $yoga^1$ as $pr\bar{a}n\bar{a}y\bar{a}ma^2$ is; and the $yog\bar{i}$ is advised to eschew fear, anger, sloth, sleeping too much, waking too much, fasting and eating too much. Tarka is defined as inference which does not go contrary to the injunctions laid down in the scriptures.

tarka-2 तर्क-२ (HP IV 40), reasoning, Mere reasoning is said not to lead to liberation.

tāḍāgi ताडागी (GS III 2, 50), one of the twentyfive mudrās enumerated by Gheraṇḍa. It consists in pushing the abdomen backwards (inwards) and thus giving it the shape of a pond (a hollow). In this mudrā the abdomen is contracted as it is done in uḍḍiyāna¹. In uḍḍiyāna¹, however, muscles of the abdominal wall are completely relaxed. This is not necessary for tāḍāgi-mudrā.

tāna तान (GS III 8), stretching. In uḍḍiyā-

nabandha the whole of the abdomen is said to be stretched backwards and upwards.

tāpa ताप (YS II 15; G 3), anxiety, fear of deprivation which is generally present while one is enjoying a pleasure. This constant anxiety is mentioned by *Patañjali* as one of the arguments in support of his thesis that all is **duḥkha** (misery) to a person who goes deep into the matter.

tāpaduhkha तापदु:ख (VB, VM II 15), pain of anguish. One of the three varieties of pains enumerated by Patañjali. These are parināmaduhkha, tāpaduhkha and samskaraduhkha. Tapaduhkha has been explained by Vyāsa as experience of anguish based on aversion. A person desiring the means for pleasure works for it through his body. In this process one favours (another) and causes pain to another. This favour or causing pain to another results into collection of dharma and adharma. This kind of karmāśaya comes into being because of greed and delusion and this is called the pain of anguish (tāpa).

tāpasa तापस (SSP VI 41), one who has subjugated the sense pleasure. A person is called tāpasa (austere) who abstains from sensuous pleasure and turns one's mind towards the Self and not simply because he besmears his body with ashes.

tāmisra तामिस्त्र (VB I 8; SK 48), According to *Vyāsa*, this is another name for

Patañjali's kleśa called dveṣa. Thus it is an innate mental disposition, one of SK's bhāva², which is responsible for the pratyaya sarga.

tāraka-1 तारक-१ (YS III 54), literally that which takes one across; here, that which brings one success in one's endeavour. Insight into the reality of things gained by saṃyama on kṣaṇa and the corresponding krama is knowledge which ensures success to a yogī.

tāraka-2 तारक-२ (HP IV 4), that which liberates. HP declares that only yoga (haṭhayoga) can liberate the man and not the (mere study of) āgamas, nigamas and dry reasonings.

tāraka-3 तारक-३ (VS VI 5), a synonym for praṇava.

tāraka-4 तारक-४ (MBU I (II) 4; ATU 3, 8), the **brahman**, knowledge of which helps in crossing the ocean of **saṃsara** (saṃsārasāgarasaṃtaraṇāt संसारसागर-संतरणात्). That which liberates from womb, birth, old age, death and the great fears of the world.

tārā तारा (ATU 9), the retina, on which the images of external objects fall. Retinal cells are commissioned into service for pūrvatārakayoga, not for the uttara one which is the highest yoga. But in the pūrvatārakayoga the retinal cells are not stimulated by an external light. The light seen by the pūrvatāraka yogī resembles an after-image without being one.

tālu तालु (G 71), palate. It is the seat of

teja (fire). It could not be the same spot as tālumūla, because teja and candra³ would not be good companions.

tālucakra নালুঘক্ল (SSP II 6), sixth cakra in the series of nine cakras, from where the stream of nectar flows. The meditation of void on it destroys the worldly attachment and citta is dissolved.

tālumūla तालुमूल (G 57), the root of the palate where it meets the throat. The candramā (candra), which is one of the nine points in the body for the yogīs to fix their attention on, is said to be situated in the tālumūla. (cf. ghaṇṭikā).

tiryak तिर्यक् (VB II 12, 34, III 18, IV 8), animal life, one of the four kinds of life well-known in ancient Indian literature, the other three being deva, manusya मनुष्य (men), and nāraka (beings living in hell).

tiryagyoni तिर्यग्योनि (SK 53), one of the three parts of the *bhautika* (material) sarga. It consists of all animals, plants and lifeless objects and is said to be of five varieties, which according to the commentators, are paśu पशु, mṛga मृग, pakṣī पक्षी, sarīsṛpa सरीसृप and sthāvara स्थावर (= two kinds of animals, birds, reptiles and trees respectively).

tivrasaṃvega तीव्रसंवेग (YS I 21), a yogi whose effort is of keen intensity (cf. adhimātra).

tunda तुन्द (GS I 51; HP II 34), belly. Probably reference is to the abdominal recti, which are rolled right and left in nauli (= lauliki).

tur i तुरी (GS V 75), trumpet, the sound of which a *yogi* hears in his right ear if he

succeeds in kumbhaka¹ of the bhrāmarī type.

turīya-1 तुरीय-१ (YCU 72, 73), cf. puruṣa³ and taijas².

turīya-2 तुरीय-२ (VS V 9, 11), fourth state, the ultimate stage of consciousness. The prior three stages of consciousness are: jāgrat, svapna and suṣupti. In the turīya state the consciousness is liberated from worldly bondage.

turiyagā तुरीयगा = turyagā तुर्यगा (VU IV (1) 3, (2) 2, 10), the seventh and the last bhūmi (stage of development) and the fourth and last stage of jīvanmukti (life after realising the Supreme Truth). According to one way of calculation, it is the 17th stage. The yogī at this final stage is called brahmavidvariṣṭha ब्रह्मिब्रिंग्ड (VU IV (1) 12). Oneness with brahman becomes the very nature of the yogī at this stage.

Another name of this state is $g\bar{u}dhasupti$ মূভমুদি (VU IV (2) 16). In this stage there is no mentation whatsoever. There is unmixed oneness. About this state we can neither say that it is, nor that it is not; i.e. we cannot describe it in anyway whatsoever.

turīyacaitanya तुरीयचैतन्य (ATU 13), the state which in neither jāgrat (waking) nor svapna (dreaming) nor suṣupti (dreamless sleep) and is, therefore, called the fourth avasthā. It is caitanya and caitanya alone-literally the fourth (caitanya).

turiyātita-1 तुरीयातीत-१ (MBU II (4) 1), one of the five states of man. It is said to be the same as the jīvanmukti (liberated) state. It is life after one has fully realised the Supreme Reality.

turīyātīta-2 त्रीयातीत-२ (TSM 151), transcending the turīya. After attaining the fourth state with the consciousness well-fixed in the middle of the eyebrows, one should visualise the place beyond turīya. This is in the brahmarandhra. Commencing from the vṛtti of jāgrat till the interior of the cavern of the brahman.

turya-1 तुर्व-१ (MBU II (4) 1). According to this text, one of the five states of man. The turya state consists in a desirable and satisfactory state of the mind when the yogi does not for a moment believe the world perceived by the senses to be real. He sees himself (=atma²) everywhere and knows himself to be brahman (= the only Reality).

This is the fourth state, the fifth being even beyond this.

turya-2 तुर्य-२ (BY II 115), the twentyfourth letter of the *Sāmaveda* is called turya. It has the form of soma, the fourth state of consciousness, a synonym of omkāra.

turya-3 तुर्य-३ (HP IV 48), a state in which the mind merges (in the place) between the eyebrows which supposed to be the seat of Śiva.

turyagā तुर्वमा (VU IV (2) 2, 10), the last variety of the seven kinds of **bhūmis**. **Turyagā** state is that wherein there is entire devotion to the state of **Ātman**, due to the non-recognition of differences of any kind between the conception and actual state of **Ātman**.

turyapada तुर्वपद (NBU 32), one of the four states of consciousness. According to MBU 55, the state of samādhi¹ is the turya state. Other three states are jāgrat, svapna and susupti.

tuști तुष्टि (SK 46-50), one of the four constituents of the pratyayasarga. According to one scheme of classification, tușți means contentment, but this contentment is not contentment with having nothing. It is contentment with something acquired, however small the acquisition may be. It is of the nature of a satisfaction which is a constituent of the pratyayasarga, according to another analysis.

Tuṣṭi is of nine types. Four of them are called ādhyātmika. They are prakṛṭi, upādāna, kāla and bhāgya (also known as ambha अम्भ, salila सलिल, ogha ओघ, and vṛṣṭi वृष्टि respectively). The remaining five tuṣṭis are of the five senses. They are called pāra पार, supāra सुपार, pārāpāra पारापार, anuttamāmbha अनुत्तमाम्भ, and uttamāmbha उत्तमाम्भ. All these tuṣṭis are a mark of a yogī falling short of perfection.

teja तेज (SSP I 40), fire-element, one of the five gross elements. Teja has five qualities; they are kṣut (hunger), tṛṣā (thirst), nidrā (sleep), klānti (fatigue) and ālasya (laziness).

tejas-1 तेजस्-१ (GS VI 17, 18, 21; ATU 2, 10, 11), light. According to GS, the light which a *yogi* sees while absorbed in tejodhyāna is the Supreme Being Himself in a concrete form.

ATU considers **tejas** to be the white light which the **tāraka** $yog\bar{i}$ sees a little above the level of the eyebrows. This text too identifies it with the one Supreme Reality and considers attending to it to be a further step in the direction of success in the $yog\bar{i}$'s endeavours, though **tejas** is an object of consciousness and is seen by means of the central sensory apparatus.

tejas-2 तेजस्-२ (G 71), one of the five elements (fire), the other four being pṛthvī, ambu, vāyu and ākāśa. This tattva³ is found in the tālumūla and resembles the insect indragopa इन्द्रगोप in colour, brightness and shape (i.e., it is more or less red and triangular). Tejas is said to be rephamaya रेफमय. This can mean that omitting a whirring sound.

According to the traditional interpretation, however, *rephamaya* means "having the letter 'ra' as its **bīja**".

tejas-3 तेजस्-३ (TBU I 41), impatience (= inability to bear ill-treatment, hence aggression). This, according to TBU, is one of the nine obstacles in the way of yoga⁴.

tejodhyāna तेजोध्यान (GS VI 15-17), dhyāna of brahman represented by the light of jīvātmā seen by a yogī in the mūlādhāra, or by the light of om seen inside between the two eye-brows.

tejobindu तेजोबिन्दु (TBU I 1), point of radiance. A particular type of meditation in which the (wise) practitioner meditates upon tejobindu (the point of

radiance) for acquiring the knowledge of the **brahman**. The **tejobindu** is supposed to be in the heart of the *viśwātman* विश्वात्मन् and which is the place of the eternal bliss.

taijas-1 तैजस्-१ (SK 25), taijas ahaṅkāra¹ that in which rajas¹ is active.

taijas-2 तेजस्-२ (YCU 72; YKU III 21), one of the four puruṣas³ who are said to experience the four kinds of activity of living beings, particularly man. Taijas¹ is supposed to be the experiencer of dreams-the dream images, ideas, joys and sorrows. In other words, the knowing subject is called taijas² in relation to dreams. As taijas² he is said to be praviviktabhuk प्रविविक्त भुक् because in a dream, consciousness is cut off from the real waking state experiences. While dreaming we forget where we are, what we do, and so on.

YKU considers taijas² to be one of the three puruṣas³, the other two being viśva and prājña.

taitila तैतिल (KU 17, 19), the prāṇas¹ which are supposed to be the life in the nāḍīs². The dictionary meaning of the word taitila is "God" (V.S. Apte). The commentator Upaniṣadbrahmayogī has, however, quoted from a kośaḥ कोशः "gamanaṃ taitilaṃ sthairyam गमनंतैतिलं स्थैयंम्." The idea seems to be that there is prāṇa in every nāḍī² just as there is prāṇa in the marmans and the nāḍīs² and marmans are all to be cut by manodhāraṇā, so that the prāṇa¹ may be released. This is metaphorical

language. The straight way of saying would be: by **dhyānayoga** the $yog\bar{i}$ realises that he is not life, nor that which is lived. For this purpose he has to direct his **manodhāraṇā** to the **marmans** and the **nāḍīs²** where **prāṇa** (= life) is supposed to reside.

tyāga त्याग (TBU I 15, 19), vairāgya (= absence of attachment = renunciation). It is one of the fifteen aṅgas of yoga according to this text. It follows Supreme Realization and brings about quick moksa.

trayimārga त्रयीमार्ग (BY XII 42), the path (that leads to brahman and shown by Vedas). Vedas are there: Rg, Yaju and Sāma and hence they are called trayi. The trayimārga is the correct and best path by which the learned sages reach the (proximity of) brahman.

trāṭaka সাহক (G I 12, 53; HP II 32-3), one of the ṣaṭkarmas -purificatory performances. It consists in gazing at a minute object until tears fall from the eyes. Of course, the winking reflex is to be kept inhibited all the while. This practice helps early success in śāmbhavīmudrā and cures eye-diseases in the bargain.

trikuṭa রিকুট (BVU 73), one of the nine nervous pathways in the head. (cf. oṃkāra). They are all to be stopped for achieving success in samādhi¹.

triguṇa-1 त्रिगुण-१ (TBU I 6), having the three qualities-virāṭ विराट्, hiraṇyagar-bha and antaryāmi अन्तर्यामी (Ref. Srinivas Ayyangar's translation). In

Yogakuṇḍalyupaniṣad III 21, virāṭ, hiraṇyagarbha and īśvara are mentioned as a set of three which merge into the pratyagātmā प्रत्यगात्मा (= brahman); and loose their individuality. This is one way of describing the indescribable brahman.

triguṇa-2 त्रिगुण-२ (BY II 73), synonym for oṃkāra. It has three characteristics. They are: sarvaṃ सर्व (whole), vijñānam विज्ञानम् (manifesting) and nirguṇam (having no quality).

tridaṇḍi নির্ভন্ত (SSP VI 38), quality of a yogi known as tridaṇḍi. One who has control over māyā (ignorance), karma (enjoyment), and kalājāla কলাজাল (worldly behaviour) and is steady like a mountain.

tridaśa त्रिदश (VB III 26), a class of gods who reside in the mahendraloka.

tridaivatya त्रिदेवत्य (BY II 74, 76), a synonym for oṃkāra, having three gods. Oṃkāra is called tridaivatya because oṃkāra is regarded as brahmā, viṣṇu and maheśvara.

tridhātu রিখানু (TBU I 6), the three-fold soul-viśva, taijas and prājñabrahman.

tridhāma-1 त्रिधाम-१ (TBUI4), brahman, who is described as having His seat as viśva in the waking state, as taijas in the dream and as prājña in the state of dreamless sleep.

tridhāma-2 রিধান-২ (BY II 18, 23), synonym for oṃkāra. Gārhapatya, dakṣiṇāgni and āhavanīya, these three types of sacrifices are called tridhāma.

- tripatha त्रिपथ (HP III 36), the meeting point of iḍā, piṅgalā and suṣumnā nāḍīs. By reverting the tongue one should insert it into the kapālakuhara for the practice of khecarīmudrā.
- tripada त्रिपद (BY II 64, 86), a synonym of oṃkāra, having three phases. With the application of praṇava and seven vyāḥṛtis along with three phased gāyatrī one is free from any disturbances in his sādhanā.
- tripāda त्रिपाद (BY IV 34, 47), a synonym of oṃkāra, having three parts covering three regions which are bhūrloka (terrestrial region), antarikṣaloka (intermediary region) and svarloka (celestial region).
- triprajña সিম্ন (BY II 18, 23, 73), synonym of oṃkāra. The oṃkāra is characterised as triprajña which includes the three states, viz., vyakta, avyakta and ajña. It is also supposed to have three kinds of consciousness as antaḥprajña, bahiḥprajña and ghanaprajña.
- triprayojana त्रिप्रयोजन (BY II 74, 76), synonym of **oṃkāra**. Owing to the different purpose, i.e., **dharma**, **artha** and **kāma**, it is called **triprayojana**.
- tribrahma त्रिज्ञा (BY II 17, 69, 70), synonym of oṃkāra. Praṇava is considered as tribrahma, according to Hiraṇyagarbha (the founder of yoga). Tribrahma means the three Vedas: Rgveda, Yajurveda and Sāmaveda.
- tribhoktā त्रिभोक्ता (BY IX 137, 138), three enjoyers. **Prāṇa, agni** and **āditya** are

- the three enjoyers of the body, water and **soma**-the three types of foodrespectively.
- trimātra রিদার (BY II 20, 69, 70), trimātra means agni, vayu and ravi (āditya). Praņava is considered as trimātra, according to Hiraņyagarbha.
- trimukha त्रिमुख (BY II 74, 75), omkāra is named as trimukha containing gārhapatya, dakṣiṇāgni and āhavanīya.
- triravastha त्रिरवस्थ (BY II 24, 97), three stages of consciousness. They are śānta, ghora and mūdha.
- triravasthāna त्रिरवस्थान (BY II 17, 21), synonym for oṃkāra. Bhūr, bhuvaḥ and svaḥ are considered as triravasthāna.
- trirātmā त्रिरात्मा (BY II 100, 101), synonym of God. Trirātmā means bala, vīrya and teja.
- trilakṣya রিলম্ব (YCU 3), the three targets.

 They are bāhya (external), madhya (middle) and āntar (inner). These three places or targets are located in one's own body. One of the truths regarding one's own body, knowledge of which is essential for the accomplishment of yoga.
- trividha নিবিঘ (BVU 73), one of the nine passages which are to be stopped by khecarimudra. (cf. oṃkāra).
- trividhajapa त्रिविधजप (BY VII 134), three kinds of japa, i.e., mānasa, upāṃśu and saśabda. Mānasajapa is considered as tranquillising, upāṃśujapa is considered as nourishing and saśabdajapa as exercising.

- trividhaprāṇāyāma त्रिविधप्राणायाम (BY VIII 7), three kinds of prāṇāyāma, i.e., mṛdu, madhya and adhimātra.
- trividhānna সিবিধান্ন (BY IX 137), threefold food. The body, water and soma are the three-fold food.
- trivṛdbrahma त्रिवृद्ब्रह्म (BY IV 78), synonym for oṃkāra.
- triveṇisaṅgama त्रिवेणीसंगम (HP III 23), confluence of the currents flowing in the three nāḍis, viz., iḍā, piṇgalā and suṣumnā. It is said that mahābandha is capable of bringing about the confluence of these currents.
- trivyūha त्रिट्यूह (BY II 100, 102), synonym for God. The all-pervading and imperishable oṃkāra is described as trivyūha which are saṅkarṣaṇa, pradyumna and aniruddha.
- triśańkha রিয়ান্ত (BVU 74), one of the nine openings in the spinal cord that are to be closed for success in kuṇḍalinī yoga⁴.
- trisaṃjña त्रिसंज्ञ (BY II 83, 85), synonym for oṃkāra. It is called trisaṃjña which are bahiḥsaṃjña, madhyasamjña and antahsamjña.
- tristhāna त्रिस्थान (BY II 86, 87), having three abodes. Oṃkāra is termed as tristhāna which are hṛt, kaṇṭha and tālu.
- trisvabhāva त्रिस्वभाव (BY II 100, 101), having three characteristics; synonym for God. Jñāna, aiśvarya and śakti are included in trisvabhāva.
- tryakṣara হ্ৰায়ৰ্য (BY II 17), three syllables, synonym for oṃkāra. 'A", 'U' and 'M' are considered the three syllables.

- tyāga त्याग (BY XI 47), renouncing the fruits of actions.
- tyāgī त्यागी (BG XVIII 10), renouncer.

 One who performs duties detaching oneself completely from action and its fruits.
- tvak-1 त्वक्-१ (SK 26), the cutaneous sense. cf. indriya.
- tvak-2 त्वक्-२ (VB III 29), the anatomical structure.

da-द

- dakṣiṇāgni-1 दक्षिणाग्नि-१ (BVU 5), one of the three fires. It is to be maintained in a pit towards the south of the gārhapatya. This fire represents the ukāra of om².
- dakṣiṇāgni-2 दक्षिणाग्नि-२ (BY II 75, 91), one of the three fires. Other two are gārhapatya and āhavanīya. The vaiśvānara (gastric fire) is situated in the mouth of dakṣiṇāgni. (cf. trimukha).
- dakṣinābandha दक्षिणाबन्ध (VBh I 24), one of the three bondages recognised by Sāṇkhyas. The other two are prākṛta and vaikṛta. The bondage of those persons who desire heavenly and earthly objects such as heaven, sons, wealth etc. is called dakṣiṇābandha. This bandha keeps the jīva revolving in the world.
- dakṣiṇāyana दक्षिणायन (DU IV 42), shifting from the left side to the right side, The continuous chain of sensations which the $yog\bar{i}s$ experience rising up in their back that sometimes shifts from one side to another. When a $yog\bar{i}$ is having these sensations in the left side and then begins to get them in the right

side, this is called dakṣiṇāyana in yogic language.

dagdhabija ব্যহারীর (BY VIII 35), burnt seed, i.e., the subliminal impressions which remain for further life, become burnt. Yogasiddhi is attained by the practice of prāṇāyāma and through that siddhi or the fire of yoga one becomes sinless, passionless, pure and gets his subliminal impressions burnt.

daṇḍadhauti दण्डधोति (GS I 37), one of the three kinds of hṛddhauti. It consists in cleansing the gullet by inserting a stalk of plantain, turmeric plant, or cane plant in it and then withdrawing it slowly. In this way kapha, pitta and kleda are thrown out of the stomach and the gullet by way of the mouth. If this dhauti is performed in the right way it cures all the diseases of the chest.

daṇḍāsana दण्डासन (VB, VM II 46), one of the thirteen āsanas enumerated by Vyāsa. Though Vyāsa does not give the technique of this āsana, but according to Yogasiddhāntacandrikā, the technique of daṇḍāsana is: sitting on the floor stretching both legs kept together.

dattātreya दत्तात्रेय (SAU III (1) 6, (2) 7 11), one of the three names of saccidānanda- the Supreme Reality, the other two names used here being parabrahma and ātmā. It is called dattātreya because this Supreme Reality is believed to have given his own self to Datta- the son of Atri.

dantadhauti दन्तधौति (GS I 13, 25), one of the four kinds of dhautis. This dantadhauti again is of four kinds and includes all the various performances prescribed by GS for cleansing the inside of the mouth.

dantamūladhauti दन्तमूलधौति (GS I 26-7), a kind of dantadhauti which consists in rubbing the part where teeth are embedded in the gums by catechu powder or clean earth so long as all the impurity is not removed. This dhauti is very useful for the practice of yoga⁴. It protects the teeth if practised every morning and is counted by the yogīs among the cleansing-processes.

dayā-1 दया-१ (DU I 6, 15; VU V 12), compassion. It is one of the ten yamas and is here explained as follows: observing (= making) no difference between self and others, i.e., taking others to be as parts of one's own self for all purposes of behaviour, mental attitude and speech.

dayā-2 दया-२ (VS I 38, 48), compassion. One of the ten yamas. Always to have sympathy for others, friend and foe, is called dayā.

dardarī दर्दरी (YTU 53), a feeling of lightness - hollowness within - which gives the *yogī* the tendency and the ability to jump from spot to spot. A long continued practice of **prāṇāyāma**² is believed to give the *yogī* this ability of jumping like a frog.

darpa दर्प (TBU I 12), pride which is a bhāva² (= sentiment) quite foreign to

the person who has realised **brahman** and has, therefore, himself become **brahman**.

darbhāsana दर्भासन (ANU 17), a seat (= mat woven of darbha grass) which a yogī may use for sitting on while practising yoga⁴.

darśana-1 दर्शन-१ (YS III 32), vision. An aspirant gets the visions of perfect yogi's by performing saṃyama (complete concentration) on the light which is seen by him as located in his own head.

darśana-2 दर्शन-२ (TBUI30, 35), the act of being conscious of something in the way of perceiving or imagining it. According to TBU, jñānamayādṛṣṭi implies a cessation of the distinction between draṣṭṛ, darśana and dṛśya¹, which is necessary for the yogāṇga dṛksthiti.

darśana-3 दर्शन-३ (SK 21, 61; SS I 28), puruşa² seeing prakṛti¹ i.e., puruşa² seeing puruşa1 as other than prakṛti1. The metaphor used by SK should not be stretched too far. It is not relevant to ask why prakrti1 does not appear after she has been seen, or whether she does not appear before the particular puruşa² who has seen her or before any puruşa² whatsoever. The meaning is only that after a purușa2 has seen puruşa¹ as separate and different from prakṛti¹, i.e., he has realised himself, there is no true samyoga between him and his linga1, though some kind of pseudo-samyoga may last for some

time. It would be more corrent to say that then there would be apavarga²- not bhoga of puruṣa². Prakṛti¹ works for bringing apavarga² to puruṣa²; and after this purpose is fulfilled in the case of a particular puruṣa² there is nothing more to be done, so far as that puruṣa² is concerned. Prakṛti² is purposive, though its work is not purposeful. All its operations are spontaneous.

darśana-4 বর্গন-४ (TSB 7), the viṣaya⁴ of the jaivatanmātra called rūpa. It is obviously of the nature of stimulation of the visual cells in the eye where this jaivatanmātra is found.

darśana-5 दर्शन-५ (ATU 9, 10, 13), seeing by tāraka. It may be anusandhāna (also called dhyāna) of pūrvatārakayoga or self-realization of amanaskayoga, also called uttaratārakayoga and śāmbhayīmudrā.

darśana-6 दर्शन-६ (VB, VM II 23), vision, distinctive knowledge. When the vision or discriminative knowledge results, the conjunction of the property and proprietor, i.e., **prakṛti** and **puruṣa** ends. Therefore, true knowledge or sight is said to be the cause of dis-correlation.

darśanaśakti दर्शनशक्ति (YS II 6), the prākṛta principle which Patañjali calls citta¹. Kleśa asmitā is mixing up the principles called dṛk and darśana i.e. not seeing the difference between one's citta¹ (the transmigrating self) and the puruṣa¹ (= the unchanging principle that introspects the changing citta¹) with which the citta is in saṃyoga.

daśapratyaya दशप्रत्यय (YSU VI 64), tenth experience. According to *Upaniṣad-brahmayogī*, this expression means daśamo'smi brahmāsmi, i.e., 'I am brahman'. The 'tenth' is the one which is generally forgotten, but is shown to the competent by a perfect guru².

daśavāyu दशवायु (SSP I 68), ten varieties of vāyu. Their names, bodily locations and functions are given below:

Name Region Function Prāṇa Heart Exhalation and inhalation Recaka, pūraka apāna Anus and kumbhaka. Increases gastric samāna Navel fire, body heat, digestive power. vyāna Throat Drying, appeasing. บปลิทล Palate Swallowing, vomitting, throwing out (excretion). nāga Perva-Mover, accords ding movement. entire body kūrma Winking Increases kṛkala appetite devadatta -Yawning dhanañj- -Nādaghosa. aya

daśādi दशादि (GS VII 3), the different states of consciousness. Samādhi¹ is described as daśābhāva because it is a state of self-consciousness, which is no state of consciousness whatever, in the ordinary sense.

daśābhāva ব্যামান (GS VII 15), forgetfulness of the ordinary state of consciousness of the moment. Tears of an emotional union with brahman (= ātmā) bring about a state in which one forgets where one is and in what condition. Daśābhāva is thus a forgetting of oneself.

dahanī दहनी (G 74), one of the five dhāraṇās. In G 71 and GS III 75, it is called vaiśvānarīdhāraṇā. Dahanī is literally that which burns like fire.

dahara दहर (ATU 2, 10), tiny and imperceptibly small spot inside the body. Such spots are supposed to be dhyānasthānas and are at times referred to as cakras. Thus the spot in the middle of the chest is dahara and bhrūdahara is the innermost point below the point on the head midway between the two eye-brows. An internally aroused light can be seen in any of these places. According to this Upaniṣad, the dahara in the chest can itself be an object of concentration. It is so in amūrtimat (without an image) pūrvatārakayoga.

daharapuṇḍarīka दहरपुण्डरीक (KU 10), the anāhata dhyānasthāna. It is the lower part of the chest, which is the seat of anāhatacakra¹. It is called raktotpalābhāsaṃ hṛdayāyatanam रक्तोत्पलाभासं हृदयायतनम् in this Upaniṣad. It is called puruṣāyatana because in the Kaṭha as well as the Śvetāśvatara upaniṣad puruṣa² described as aṅgu-sṭhamātra अंगुष्ठमात्र, literally of the size of the man's thumb, is said to reside in the cavity inside the hṛdaya (chest).

dāna-1 दान-१ (SK 51; TSM 33), one of the eight siddhis³ (special powers acquired by yogīs). Vācaspati Miśra seems to be correct in translating the word as śuddhi, i.e. cleaning. It would perhaps be still more correctly rendered as aśuddhikṣaya (removal of impurities) which according to Patañjali, leads to jñānadīpti (YS II 28) and kāyendriyasiddhi कायेन्द्रियसिद्ध (YS II 43), If not kāyendriyasiddhi itself, dāna is something akin and directly leading to it.

dāna-2 दान-२ (VS I 57), charity. One of the ten **niyamas**. The fairly earned money or anything that is given to benefit the needy person.

dāna-3 दान-३ (BG XVII 20-22), Gītā describes three kinds of gift or donation, namely, sāttvika, rājasika and tāmasika. The gift which is given with the feeling that it is one's duty to give, and which is given at the right place and time and to a worthy person is called sāttvika. The gift which is given with a view to receive something in return, or looking for the fruit, is accounted as rājasika and the gift that is given at a wrong place or time to unworthy persons without respect is declared to be tāmasika variety of dāna.

dik दिक् (TSB 8), one of the twelve deities who reside in the twelve $n\bar{a}d\bar{i}s^1$ in the form of their presiding deities.

divā दिवा (HP IV 42), sūrya, i.e., piṅgalānādī.

divya-1 विद्य-१ (YS III 41), VB speaks of just having a sensation and *Patañjali* of a sense giving a sensation, without the physical sense organ being externally stimulated. Such an experience is called divya¹. The ability can be acquired by performing saṃyama on the relation of the sense organ to the corresponding mahābhūta. As applied to the auditory organ, e.g., it is the ability to sense every sound irrespective of intensity, distance or obstruction on the way.

divya-2 दिव्य-२ (VB I 35, III 36). A yogī may begin to have an internally aroused sensation even before acquiring the ability to go into samādhi and know things by saṃyama. Such as experience, according to Patañjali, comes naturally after puruṣa¹ jñāna is achieved by saṃyama on svārtha.

divya-3 दिव्य-३ (VB I 15, II 42), divine. Divine sukha and divine objects like svarga स्वर्ग (heaven) are quite different from the worldly happiness and worldly pleasures.

divyadṛṣṭi-1 दिव्यदृष्टि-१ (HP II 31), keen eyesight as a result of the practice of netikriyā which is one of the ṣaṭkriyās (six cleansing processes). (cf. netikriyā).

divyadṛṣṭi-2 दिव्यदृष्टि-२ (HP III 94), heavenly knowledge or insight. This is achieved as a result of amarolimudrā which is a variety of the vajrolimudrā. (cf. amaroli and vajroli). dīpana दीपन (GS I 43), activating, enkindling. Mūlaśodhana awakens the vahnimaṇḍala to activity, i.e., generates heat in the stomach. HP (II 78) considers agnidīpana to be a mark of success in haṭhayoga.

dīrgha दीर्घ (YS II 50), see deśa². dīrghasūkṣma दीर्घसूक्ष्म (YS II 50). Each of Patañjali's first three types of prānāyāma² is either dīrgha or

sūkṣma. As a result of practice, prāṇāyāma² becomes more and more sūkṣma in respect to deśa and dīrgha in respect to kāla and saṅkhyā.

duḥkha-1 दु:ख-१ (YS I 31, 33, II 34; TBU I 14; SK 1), pain, which is utterly absent in the person who has realised the brahman and is himself brahman (TBU). According to Patañjali, however, life is essentially painful and that we take it to be pleasant is a mark of avidyā. In the end even pleasant experiences lead to pain. Moreover, the anxiety that the pleasure giving experience may not last, is itself painful and the habit of enjoying a pleasure is a perennial source of pain. Besides, mental conflicts, from which no one is free, are all painful.

Three kinds of pain, viz., ādhyātmika, ādhibhautika and ādhidaivika are well-known in ancient Indian Tradition. This classification is based upon 'immediate cause of pain'. The remote cause of pain may always be one's own karma. If the immediate cause of pain is physiological or mental the pain is

called **ādhyātmika**. If it is caused by another man or an animal the pain is said to be **ādhibhautika**. If it is due to a natural catastrophe it is considered to be **ādhidaivika**. The only escape from all kinds of **duḥkha** is **kaivalya**.

duḥkha-2 दु:ख-२ (TBU I 2), taking pains (= painful effort). The dhyāna of brahman is not easily attainable. It involves painstaking effort.

duḥkhaphala दু:জ্ৰদল (NGB II 14), painful result. All those consequences (birth, span of life and kind of experience) have pleasure and pain as their combined results. When caused by puṇya (virtue), they give rise to pleasurable fruit. And when caused by apunya (vice) they give rise to pain.

duḥkhavighāta दु:खविघात (SK 51), freedom from pain. Obviously in this context it is only a comparatively temporary freedom from pain not kaivalya (=emancipation), which alone is the real and permanent freedom from pain.

Duḥkhavighāta covers three of the eight siddhis³ mentioned in this Kārikā because of the well-known three kinds of pain, viz., ādhyātmika, ādhidaivika and ādhibhautika. (See duḥkha).

durita दुरित (GS I 30), coarse, hard. Food which is hard to digest *yogīs* are not permitted to eat.

durmitriyā दुर्मित्रिया (BY VII 9), one of the Vedic verses or mantra. One should sprinkle the water with this mantra and wash different parts of the body one by one. duṣkṛta दुष्कृत (GS I 6), evil deed. One gets a particular body as a result of the good and bad deeds one has done in previous lives.

dṛkśakti दृक्शिक (YS II 6; VB II 6, 20), puruṣa¹. It is quite distinct from and incommensurable with darśanaśakticitta¹. cf. puruṣa¹ and citta¹.

dṛksthiti द्विस्थित (TBU I 15), restraining the movements of the eyes. Movement of the eye balls are a sure indication of mental activity. For arresting the incessantly flowing stream of consciousness it is necessary to stop theses movements. In this *Upaniṣad* such restraint is included among the fifteen components of yoga⁴.

drdhatā दृढता (GS I 9, 10), strength, result of the **āsanas**.

dṛśi दृशि (YS II 20, 25), puruṣa¹.

dṛśya-1 दृश्य-१ (YS II 18, 21, IV 19, 23), the knowable. The entire universe as known by anybody, including the knowing citta² itself, i.e., the concept which any citta² forms of himself. In the absence of viveka (=realization) dṛśya¹ takes the form of bhoga and in the state of dharmamegha-samādhi² (sarvathā सर्वथा vivekakhyāti) that of apavarga.

dṛśya-2 दूश्य-२ (YS IV 21), introspection. Cittāntaradṛśya चित्तान्तरदृश्य is introspection of citta² by citta², i.e., seeing one's own citta². If there is another citta² to introspect one's citta², then three would be no end to one's citta²-an infinite regress, which is impossible. dṛśya-3 दृश्य-३ (YS II 17), one's citta¹⁻²
which is in fact only a part of the entire
dṛśya-a sāttvika (related to sattva)
part of it. It is with this that a puruṣa is
said to have saṃyoga; though, strictly
speaking, saṃyoga of a puruṣa is with
a krama which is taken to be citta¹,
i.e., of which a citta¹ is the pariṇāma
in the people's minds. A dṛśya³ is a
krama seen as a citta¹.

dṛśya-4 বুগ্ৰ-৬ (VB II 18, 21), that which is seen, a synonym for prakṛṭi. Since the objects-manifestation of prakṛṭiare for the puruṣa i.e., for the fulfilment of the purpose of experience and liberation. It appears as the object of experience of puruṣa, the pureconsciousness.

dṛṣṭa-1 वृष्ट-१ = prativiṣayādhyavasāya प्रतिविषयाध्यवसाय (SK 4), perception of an object. They generally made no difference between perception and sensation, as the modern western psychologists do, though the ancient Indians often speak of simple sensa and images, e.g., Patañjali's viṣayavatī pravṛtti.

Dṛṣṭa¹, therefore, is not always a vṛtti¹ of a buddhīndriya and manas² combined. Still the object of dṛṣṭa is always viśeṣa (particular) not sāmānya (general).

dṛṣṭa-2 রুছ-২ (SK 1,2). In kārikās 1 and 2, dṛṣṭa² obviously includes anumāna (inference) and āptavacana (testimony). Here it stands for the ordinary methods of investigation, viz. perception, inference and testimony.

dṛṣṭa-3 বৃছ্-২ (YS, VB, VM, VBh, B I 15), seen. Object is of two kinds, dṛṣṭa (seen) and ānuśravika (heard of). The deatchment of the mind from seen objects such as women, food, drinks, and power-termed as dṛṣṭa objects, is one of the two conditions of called vaśikāra-vairāgya.

dṛṣṭajanma दृष्टजन्म (YS II 12), the present life. The vipāka of some karmāśayas takes place in the life in which they are formed and of others in subsequent lives called adṛṣṭajanmas.

dṛṣṭā বৃহ্ব (SK 61, 66), seen, discriminated (faminine). When a puruṣa² realises that he has discriminated puruṣa¹ from prakṛti¹ finds that she has been discriminated by Him, connection between puruṣa¹ and prakṛti¹ is severed. Every puruṣa² is a combination of puruṣa¹ and liṅga¹. When puruṣa¹ is referred to, emphasis is on that component of puruṣa² and when puruṣa² is meant emphasis is on the liṅga¹ component. SK does not always distinguish between the two. This causes much confusion.

dṛṣṭānta दृष्टान्त (ABU 9), example.

Brahman being unparalleled (anupama अनुपम), no example can be cited to illustrate it. Nor can it be the conclusion of a logical syllogism (hetu हेत्).

dṛṣṭi-1 दृष्टि-१ (ATU 6, 9, 11), visual antardṛṣṭi (= anusandhāna).

dṛṣṭi-2 दृष्टि-२ (ATU 12), sight (= ordinary sight by means of the eyes i.e. ordinary seeing). In śāmbhavīmudrā, the sight

(= gaze) is directed outwards while the lakṣya of the yogī is an antarlakṣya. It is nothing which he sees with his eyes, though the eyes may be kept open. dṛṣṭi-3 दृष्टि-३ (YSU VI 70), indriyas¹. The prāṇas, the indriyas¹ and manas¹ are said to be essentially one and the same. The meaning is that the living being is an organism which works as a whole. These are not so many independent entities in the living being. Various substantive words are used to explain the various functions performed by the

deva देव (VB I 19, II 44, III 18, IV 8), one of the four kinds of life well-known in ancient Indian literature; viz., deva, manuṣya मनुष्य (men), tiryak and nāraka. Deva existence being superior to the other three, it is described by VB as akin to kaivalya. SK's bhautika sarga consists of only three kinds of life. Nāraka has been omitted.

one whole organism.

devadatta-1 देवदत्त-१ (DU IV 34; G 24; YCU 25; SAU I (4) 13), one of the five secondary vāyus enumerated under nāgādyāḥ vāyavaḥ. The sphere of action of this vāyu is said to be yawning. It would thus be the yawning reflex. According to SAU and DU, the function of devadatta is sleep.

devadatta-2 देवदत्त-२ (VS II 42, 50,54), one of the ten vāyus. Vasiṣṭha mentions its location in skin and bones and its function as yawning. (cf. daśavāyu).

deśa-1 देश-१ (TBU I 15, 23), literally place. It is considered by this *Upaniṣad* to be one of the fifteen yogāṅgas. The

meaning as explained is a solitary place. Practice in a solitary place is also considered to be a yogānga by this rsi. deśa-2 देश-२ (YS II 50; VB II 50, 51), the first three types of prānāyāma² mentioned by Patañjali, in which the kumbhaka¹ is always preceded by exhalation or inhalation. This variety of kumbhaka1 can be dirgha or sūksma in three dimensions, i.e. in respect of deśa², kāla and sankhyā. A prāṇāyāma² is said to be sūkṣma in respect of deśa² when exhalation or inhalation preceding the kumbhaka is not forceful; i.e., air is slowly and gently exhales or inhaled.

deśa-3 देश-३ (YS III 1), object of concentration, which may be a particular spot in the *yogīs* body or an object outside (cf. VB). **Dhāraṇā** is defined by *Patañjali* as retaining an object in the focus of consciousness.

deśa-4 देश-४ (YS, VB, VM, VBh, NGB II 31), place, a place of pilgrimage etc. One of the fourfold essential conditions to observe a vow. Others are jāti (species or kinds), kāla (such as 14th of the month or other), and samaya (circums-tances). The yamas must be observed by all means not limited by these above considerations.

deha-1 देह-१ = śarīra शरीर(TSB 1; YSU I 73, 165, 168; TSM 54-56, 58), piṇḍa. The living body-one of the four things about which *Triśikhibrāhmaṇa* asked āditya. TSB being a psychological study, it investigates human behaviour,

including action. In YSU I 72, human body is described as having nine doors and in I 165 as a *daśadvārapura* दशद्वारपुर (having ten doors).

According to YSU I 73, a *yogī* should pay no heed to the body. In I 168, the body is said to be a means of acquiring **siddhis**³ (= success in acquiring extraordinary abilities). The body, presumably the human body, has one *stambha* स्तम्भ (= the spinal column), nine or ten openings and five gods though it is called only *śivālaya* शिवालय (abode of **śiva**) and *śivaśaktiniketana* शिवशक्ति-निकेतन (abode of **śiva** and **śakti**).

deha-2 चेह-२ (VS II 3, 5-6), body. The human body is said to be of 96 fingers in length when measured by one's own fingers. There are 32 ribs in it on the two sides of the backbone, and is said to contain 18 vital points and seventy two thousand nāḍis. (cf. marmasthāna).

dehamadhya देहमध्य (VS II 8-11; III 63, 68-9), centre of the human body and located in between the anus and penisidentified to be the perineum. This has been recognised as one of the eighteen vital points.

dehasāmya देहसाम्य = aṅgānām samatā अंगानां समता (TBU I 15, 28), the state of body when a yogī merges into brahman. It is not the rigidity of a dried up tree, but a superior kind of inactivity. dehasiddhi देहसिद्धि (HP III 99), conquest of the body. Exquisiteness of form, elegance, strength, and vigour are achieved through the practice of vajrolimudrā.

dehāgni देहाग्नि (GS I 52, II 40, 43; V 68), gastric heat which helps digestion. It is increased by practising laulikī, makarāsana, bhujangāsana or sūryabhedana prāṇāyāma².

dehānala देहानल (HP II 52), the bodily heat. After sufficient practice of ujjāyī prāṇāyāma, a specific type of heat is generated in the body. This has its own spiritual significance. Generally, dehānala also means gastric-fire which helps in the proper digestion of food. But this is relevant for worldly purposes whereas, in the context of ujjāyī it means some inner-fire generated in the body, which is of spiritual significance for the yogasādhaka.

dehī देही = jīva जीव (G 66) living being. Life sticks to an amṛtapūrṇa अमृतपूर्ण (filled with nectar) body as fire sticks to fuel. The idea is that so long as there is fuel fire will not go out. Whatever may be his age, if a haṭhayogī fills his body with the nectar secreted from the upper parts of the brain, he does not die so long as he does not allow this nectar to be consumed by the sūrya² in his nābhi.

daiva देव (SK 53), one of the three great divisions of the **bhautika sarga.** The **devas** of this division of creation are supposed to be of eight kinds, which are not mentioned. The commentators consider them to be: **brahmā** *prājāpatya* प्राजापत्य, *saumya* सौम्य, *aindriya*

ऐन्द्रिय, gandharva गन्धर्व, yakṣa यक्ष, rākṣasa राक्षस, and paiśāca पैशाच.

daivīsampat दैवीसम्पत् (BG XVI 3, 5), divine quality. Divine qualities are 26 in number known as : (1) abhayam अभयं (fearlessness), (2) sattvasamsuddhi सत्वसंशुद्धि (purity of heart), (3) jñānayogavyavasthiti ज्ञानयोगव्यवस्थिति (steadfastness in knowledge and yoga), (4) dānam (alms giving), (5) damam दमं (control of senses), (6) yajñah यज्ञ: (sacrifice), (7) svādhyāyaḥ स्वाध्याय: (study of **śāstras**), (8) **tapas** (austerity), (9) **ārjavam** (straightforwardness), (10) ahimsā (harmlessness), (11) satyam (truth), (12) akrodhah अक्रोध: (absence of anger), (13) tyāgah (renunciation), (14) śāntiḥ शान्तिः (peacefulness), (15) apaisunam (absence of crookedness), (16) dayā (compassion), (17) aloluptva (uncovetousness), (18) mārdavam मार्दवम (gentleness), (19) hrī ही (modesty), (20) acāpalam (absence of fickleness), (21) tejah (vigour), (22) kṣamā (forgiveness), (23) dhṛṭi (fortitude), (24) **saucam** (purity), (25) adrohah (absence of hatred), and (26) nātimānitā नातिमानिता (not too much of pride). The daivisampat is deemed to be conducive for liberation.

doṣa-1 दोष-१ (ANU 7-8, 17), defect. It is physical, maybe of the living body and caused by the life processes themselves or of lifeless matter; e.g., of the ground, or the seat, on which a $yog\bar{i}$ sits for performing yoga. The former defects are removed by $pr\bar{a}n\bar{a}y\bar{a}ma^2$ and the

- latter by ordinary physical means like treating with germ-killers.
- doṣa-2 दोष-२ (VB, VM III 29), humours.

 These are three in number, viz., vāta,
 pitta (bile) and kapha (phlegm).
 Saṃyama on nābhicakra bestows the
 knowledge of the different components
 of the body. Doṣa is one of the
 components.
- doṣa-3 दोष-३ (HP I 31), disease. Practice of mayūrāsana destroys all diseases of the spleen and the stomach.
- doṛa-4 दोष-४ (HP V 1-2), those who practise **yoga** erroneously get the disease of $v\bar{a}ta$ etc. For the treatment of such diseases a $yog\bar{i}$ should notice the course of $v\bar{a}yu$.
- daurmanasya दौर्मनस्य (YS I 31), mental pain, depression-one of the four concomittants of vikṣepa (disturbance during the course of the practice of yoga¹).
- dyuti-1 द्युति-१ (ATU 6), hue (= colourquality depending upon the wavelength of light). Niladyuti नीलद्युति, therefore, is light in the blue band (= the blues) of the colour spectrum.
- dyuti-2 द्युति-२ (ATU 7), brightness. Tattvākāśa is resplendent with a super brightness.
- dravya द्रव्य (VB, VM III 44), aggregate of general and particular properities. Earth element, for example, is an aggregate of generic and particular properties. General property of earth element is to be limited in extent (mūrti), liquidity is the generic property of water, heat of fire, mobility of air, all-

- pervasiveness of ākāśa. The particular properties of earth, water etc. are smell, taste, etc. Thus the substance (dravya) is an aggregate of these two properties, i.e., general and particular. Further, the aggregate here is such that the different components do not exist separately but they form indistinguishable whole.
- dravyato'stitva द्रव्यतोऽस्तित्व (VB IV 12), reality which actually exists. Only some dharmas of a dharmi are actually present. Others are past or future. But they are all real according to *Patañjali*. VB uses the expression dravyato'stitva for an actually present dharma.
- draṣṭā द्रष्टा (YS I 3, II 17, 20, IV 23), puruṣa¹.
- draṣṭṛṭva রুভুন্ন (SK 19), cetanā of a puruṣa¹, which is directly opposed to anything prākṛṭika, i.e, triguṇāṭmaka সিণ্ডানেনক (related to three guṇas). Prakṛṭi is acetana, puruṣa¹ is cetanā. This is one of the ways in which they are said to differ from each other.
- drāvaṇi द्रावणी (G 74), one of the fivefold dhāraṇās. They are known as:
 stambhani (pārthivi dhāraṇā).
 drāvaṇi (vāruṇi dhāraṇa), dahani
 (vaiśvānari dhāraṇā), bhrāmaṇi
 (vāyavi dhāraṇā) and śoṣaṇi
 (nabhodhāraṇa). Drāvaṇi means
 liquifying. Dhāraṇā consists in citta
 and prāṇa both being held steadily in
 one of the five pṛthivyādi dhyānasthānas. After concentrating upon
 prāṇa, the feeling in concentration
 becomes thin and rarified like water

which is explained as vāruṇi or drāvaṇi dhāraṇā meaning meditation upon the acqueous feeling of prāṇa accompanied by citta. According to verse 70 of GS, drāvaṇi dhāraṇā is explanied like this; the water element is in the throat. Its colour is white. It is filled with nectar and is characterised by vakāra and is associated with viṣṇu. One should hold the prāṇa accompanied by mind for five ghaṭikās in that region. This dhāraṇā on the waterelement enables to digest even the worst poison.

dvandva $\overline{\mathbf{a}}$ - $\overline{\mathbf{a}}$ (YS II 48), loss of physiological homeostasis which calls for an action or movement. e.g., hunger and thirst, heat and cold, standing or sitting for a long time in one posture are dvandvas. Absence of such dvandvas for a shorter or longer period of time is the essence of $\overline{\mathbf{a}}$ sana. As long as a $yog\overline{i}$ can remain without feeling the urge to move so long does his $\overline{\mathbf{a}}$ sana continues.

dvandvātita द्वन्द्वातीत (BG IV 22), person beyond the pairs of opposites, i.e., of heat and cold, loss and gain, pleasure and pain. When the pairs of opposites do not produce any feeling of pain etc. in a sādhaka, such a sādhaka is known as dvandvātīta.

dvādaśāracakra ব্রব্যাবেক্স (TSM 60), the root of the nāḍis in the nābhi. It is said to be a wheel-like structure of which the twelve principal nāḍis are the spokes. Brahman himself moves the wheel; and jiva¹, riding the prāṇas¹,

goes from one spoke to another in turn. This is the idea of this author. **Viṣṇu** and other gods are said to reside in the **nāḍīs¹** though **viṣṇu** is not mentioned as one of the *akṣādhidevatās* अक्षाधिदेवता in TSB 8.

According to G, the **prāṇas** wander over thousands of $n\bar{a}d\bar{i}s^1$ in the form of $j\bar{i}va^1$ (G 25).

dvāra-2 हार-२ (ANU 26), method, the way to self-realization. Prāṇa along with manas and indriyas goes through the passage through which yogi sees the way to self-realization. These ways are seven, viz., (1) hṛddvāra, (2) vāyudvāra, (3) mūrdhādvāra मूर्धाद्वार, (4) mokṣadvāra सुषिरद्वार, and (7) maṇḍaladvāra मण्डलद्वार.

dvipuṭāśrayā द्विपुटाश्रया (HP III 11), the activity which is dependent on two coverings. Here two coverings means iḍā and piṅgalā. The activity of inhalation and exhalation which takes place through iḍā and pingalā and is dependent on it.

dveṣa द्वेष (YS II 3, 8; VB II 8; YSH IV 45), one of the five inborn dispositions. In fact many dveṣas are formed according to the law that painful situations are avoided and that if one does find oneself in such a situation one experiences specific feeling which is unpleasant.

Patañjali's definition shows that **dveṣa** is part of this law of feeling itself. But each sentiment formed according to this law, is also called a **dveṣa**. Every fear, anger, jealousy, enmity, etc. is thus a **dveṣa**. As YSH thinks **dveṣas** to be aprītyātmaka अप्रीत्यात्मक (unpleasant), this text obviously refers to the experience promoted by **dveṣas**, as explained above.

dha-ध

dhanañjaya-1 धनंजय-१ (G 24; BVU 67; TSM 87; DU IV 24; YCU 23, 26; SAU I(4) 13), one of the nāgādi vāyus. It is supposed to be responsible for whatever goes on in the body for sometime after death. The bright appearance of a yogī's dead body is the effect of dhanañjaya being active. SAU considers production of kapha to be the function of dhanañjaya and GS the production of sound.

dhanañjaya-2 धनंजय-२ (VS II 42, 52, 54), one of the ten vāyus. Other nine are prāṇa, apāna, samāna, udāna, vyāna, nāga, kūrma, kṛkara, and devadatta. Dhanañjaya along with nāga, kūrma, kṛkara and devadatta resides in skin and bones. The main function of dhanañjaya is thirst etc.

dhanurāsana धनुरासन (GS II 3, 18; HP I 25; TSM 43), one of the principal āsanas¹. It consists in spreading the legs like a rod on the ground (lying on the belly, which is not mentioned) and holding the toes of the two feet with the two hands by curving the body like

a bow. HP and TSM add, "so as to bring the toes to the level of the ears". This latter may be called ākarsana आकर्षण dhanurāsana. It is performed in the sitting position. Each toe is held by the corresponding hand alternately and the bent body takes the shape of the string of a fully stretched bow. According to another interpretation of HP I 25, the technique of dhanurāsana consists in bringing both the toes of the legs simultaneously upto the respective ears from back. The text seems to suggest that the toes are not to be brought alternately upto the ear. The words 'pādān'gusthau' पादांगुष्ठौ and 'pānibhyām' पाणिभ्यां suggest that they are to be held and brought upto the respective ears (śravanāvadhi) simultaneously. And for this, one will have to assume first prone lying position. (cf. Hathapradīpikā Hindi Edition, 1980, published by Kaivalyadhāma).

dharma-1 धर्म-१ (YS III 13, 14, IV 12; VB III 10), a dharmapariṇāma. Prakṛti² in action is never stationery, and yet we perceive stationery and more or less permanent objects and act accordingly. These objects are called in YS dharmapariṇāmas. The basis of each dharmapariṇāma is a krama of prakṛti². We see these kramas as objects. The kramas are not seen by everybody as they are by the scientist or the metaphysician. But every continued pattern of change, which a krama is, is a dharmapariṇāma for

the lay percipient as well as the thinker, in whatever way each may understand it. When **kramas** corresponding to **dharmapariṇāmas** are analysed, we see **lakṣaṇas** and **avasthās**, which are also called by *Patañjali* **pariṇāmas**; though they are, in fact, only analysed components of **kramas**. They have no **dravyato'stitva** (existential reality) as the **dharmapariṇāmas** have.

dharma-2 धर्म-२ (VB II 15; IV 11; SK 23), virtue. Vyāsa, like all the ancient Indian thinkers, thinks that one reaps merit by being kind to others and demerit by causing pain to others. Patañjali's word for dharma¹ in this sense is puṇya. According to SK, by living a life of dharma one rises in the scale of bhautikasarga (grades of living beings).

dharma-3 धर्म-३ (BY II 76), one of the three purpose or human ends. Others are artha and kāma.

dharmameghadhyāna धर्ममेघध्यान (VBh, NGB IV 29), dharmamegha is the third variety of samādhi, but here it has been described as dhyāna. It has been explained as the highest stage of distinct knowledge between sattva and puruṣa. This discriminative knowledge is achieved in fourth type of samprajñātayoga, i.e., asmitānugatā, but the earlier three are also implied here. That which showers the knowledge of complete destruction of kleśa and karma is called dharmamegha.

dharmameghasamādhi धर्ममेघसमाधि (YS IV 29), a condition in which nothing

except purusa1 is ever perceived, imagined, or thought of as abiding, worthwhile, pleasurable or as one's own self. This is sarvathā vivekakhvāti which directly leads to kaivalya. For a yogi in this condition nothing else has any value. He is perfectly unconcerned and takes no notice of any object (dharma¹). Between viveka (= liquidation of avidya) and kaivalya there is an interval of dharmamegha samādhi². In this state, the $yog\bar{i}$ lives as if in susupti (sleep)-not perceiving or thinking of any objects whatsoever. This, according to Patañjali, is the last stage of yoga1 attained after samprajñāta samādhi² is achieved.

dharmī धर्मी (YS III 14; VB II 22, III 13-15, IV 12), Patañjali explains dharmī as that to which a series of past, present and future dharmas belong. He does not throw any more light on what his concept of dharmi is. There is, however, no doubt that for him **dharm** is a strictly relative term, its correlate being dharma. According to him, dharmas of a dharmi are the objects which take any of the forms in which the dharmi can exist. In this way both niruddha and vyutthita cittas are dharmas of citta1; and citta itself, in its turn, is a **dharma** of asmitāmātra. So are all the cittas in the world, of which asmitāmātra is the dharmī.

Asmitāmātra is dharma of liṅgamātra and so on. Aliṅga is the last dharmī which is not the dharma of any **dharmi**. Taking a material example, VB calls earth the **dharmi** of a lump of clay, a pot, as well as the broken pieces of a pot, and so on. In fact, earth is the **dharmi** of everything made of earth; and earth, rocksalt, silver, gold etc. are all the **dharmas** of the **mahābhūta pṛthivi** and so on up to **aliṅga**.

dhātu धातु (VB I 30, III 29). Seven of the constituents of kāya काय (body) of which a yogī gets complete knowledge by performing saṃyama on the navel plexus for which Patañjali's word is nābhicakra¹. All these dhātus are subject to disease. According to this text, they are skin, blood, flesh, fibres, bones, marrow and semen.

dhātustrilaulya धातुस्त्रिलौल्य (YTU 31), hankering for gold, women, etc. It is one of the obstacles in the path of yoga, which appears soon after one steps on this path. If the yogi is fortunate, he sees that these are like a mirage and is not tempted by them.

dhāraṇa धारण (SK 32), maintaining life by means of autonomic reflexes like respiration, digestion, circulation. (cf. vāyu). Dhāraṇa is said to be the joint function of all the karaṇas².

dhāraṇā-1 धारणा-१ (G 4, 67-75, 96; GS III 2, 59-63; YCU 107, 110, 112; DBU 41; KU 1, 12, 13, 18; VU V 12; TSM 31; NBU 8). According to G, in dhāraṇā citta² as well as the apānavāyu, here called as prāṇa, are carried to a certain dhyānasthāna (cakra) and

made to stay there for two hours. It is not necessary for $dh\bar{a}ran\bar{a}$ that there should be one simple single object present before consciousness. What is required is that the mind should not now allow to slip away the object of $dh\bar{a}ran\bar{a}^2$, e.g., the image of the $mah\bar{a}$ - $bh\bar{u}ta$ (element) etc. on which $dh\bar{a}ran\bar{a}$ is being performed. $Dh\bar{a}ran\bar{a}$ implies that all action is suspended while a $yog\bar{i}$ is in that state; and for this reason it is difficult to perform.

YCU thinks that $dh\bar{a}ran\bar{a}$ brings steadiness of mind to the $yog\bar{i}$ and the value of $dh\bar{a}ran\bar{a}$ is here said to be twelve times greater than that of $praty\bar{a}h\bar{a}ra$ (cf. $Upaniṣadbrahmayog\bar{i}$) and that of $dhy\bar{a}na$ twelve times higher than that of $dh\bar{a}ran\bar{a}$.

Gorakṣa has mentioned a difference of duration between dhāraṇā, dhyāna and samādhi¹. According to him, the last is to be continued for twelve days, dhyāna for twentyfour hours and dhāraṇā for two hours only.

KU equates dhāraṇā with dhyānayoga, which is compared to a sharp weapon, because its function is to sever the bands which bind the ātmā to the body and thus make him free from the bondage of life and death. This is the main theme of this Upaniṣad which is announced in the very first verse and is claimed to be the truth as laid down by svayambhū स्वयम्भू (Śiva) himself. Dhāraṇā is here said to be the means by which yoga can be successful and

mokṣa attained. Classification of yogas by series, adopted by VU, is into ḥatha, mantra and laya. But the wellknown eight aṅgas of yoga¹ are also mentioned. Perhaps the two classifications of yoga correspond to each other as follows:-

- (1) hatha corresponds to yama, niyama, āsana¹ and prānāyāma²,
- (2) mantra to japa, and
- (3) laya to pratyāhāra, dhāraṇā, dhyāna and samādhi¹.

Patañjali would place japa (recitation of mantras) under iśvarapraṇidhāna, which is one of his niyamas, and the nādānusandhāna part of mantra under dhāranā.

The yogāṅga dhāraṇā is explicitly described by TSM as cittasya niścali-bhāva चितस्य निश्चलीभाव (steadiness of mind). The distinction between dhāraṇā and dhyāna made in this text is the same as that made by Gorakṣa; viz., dhyāna is always on the ātmā² (G 76), which dhāraṇā need not be so. Dhāraṇā as a yogāṅga is described in MBU also as fixing the mind on caitanya (= paramātmā = brahman) by ignoring all pleasures of senses.

dhāraṇā-2 धारणा-२ (YS, VB, VM, VBh II 53, III 1), concentration. According to Patañjali, dhāraṇā is the confining or binding of citta to a single object. Vyāsa considers it to be both internal and external binding of mind. Internal objects enumerated are navel circle, the lotus of the heart, the light in the brain,

the tip of the nose, etc. External concentration can be practised on any external object.

dhāraṇā-3 धारणा-३ (VS I 37, IV 1-5), stability of mind. Vasistha describes the practice of **dhāraṇā** as follows: (1) After getting mastery over attributes of yamas etc. one should practise stability of mind at one's own self. This is called dhāranā; (2) concentration on external ākāśa (bāhyākāśa) with internal ākāśa (antarākāśa) within one's heart is also **dhāranā** according to *Vasistha*; (3) the process of dhāranā has also been defined as 'concentrating the five mystical letters (pañcavarnas) on the spots of the five element-earth, water, fire, air and ether and also concentrating on the five deities at the respective element is the technique of dhāranā. All these are different techniques of dhāranā and according to Vasistha, there are five dhāraṇās. Vasiṣṭha also describes the five elements in the body with the respective letter and deity to be concentrated in each of these regions. This is being made clear through the following chart:

Element Location Letter. Deity Heet to Brahmā Earth la ल knees Water Knees to va ব Vișnu anus Fire Rudra Anus to ra र heart Air Heart to ya य Mahat the midddle of
the eyebrows
Ether middle ha ह Avyakta
of the eye
brows to
the top of
the head.

- dhāraṇā-4 धारणा-४ (SSP II 37), firm concentration. One should establish the total concentration unmoved like an unflickering candle light, both in the external and internal loci. This is dhāranā.
- dhīratā धीरता = dhairya धैर्य = dhṛti घृति (GS I 10; VU V 13), fortitude. It is the natural consequence of pratyāhāra, which according to GS, is a complete withdrawal of the mind from the objects of senses. VU considers it to be one of the ten yamas.
- dhṛti-1 धृति-१ (SAU I (I)12; VS I 46), fortitude. Balanced state of mind in all situations, e.g., gain or loss of wealth, kins, men, etc.
- dhṛti-2 ছুনি-২ (DU I 6, 17-18; TSM 33; VU V 13), firm conviction. Liberation is possible only through the *Veda*. This conviction is named **dhṛti** by the Vedic scholars. This is also a firm realization that 'I' alone is the soul. This is one of the ten **yamas**.
- dhṛti-3 धृति-३ (NBU 11), dhṛti is the tenth mātrā of the praṇava. NBU considers praṇava as having twelve mātrās.
- dhṛtikāraṇa-1 धृतिकारण-१ (VB II 28), cause of support. One of the nine causes

enumerated by $Vy\bar{a}sa$. The senseorgans being the support to the body, and also the body being support to the sense-organs. So also the gross elements supporting the body and so on. This is called **dhṛtikārana**.

- dhairya-1 धेर्च (HP I 16), fortitude, one of the six important factors enumerated by Svātmārāma for the success in yoga. Success in yoga is attained only after sustained, continuous, long practice with patience.
- dhauti धौति (GS I 12-14, 19-22, 24-26, 28, 40; V 36-7, 44), one of the ṣaṭ-karmas. It is the means prescribed for nirmala (complete) nāḍīśuddhi (purification of nādīs).
- dhyāna-1 ध्यान-१ (YS III 2; GS I 11, VI 1, 14-8, 20-21; G 76-7; TBU I 36; YSH 16, 18, 24), exclusive occupation of consciousness by a single content. Patañjali has taken up dhāraṇā, dhyāna and samādhi together. For him they are ascending degrees of concentration. According to him, if an object continues in the focus of consciousness while other objects are shifting from focus to margin or vice versa, or appearing and disappearing, the state of mind is dhāraṇā. Then if the margin is completely obliterated and only one object holds the entire field of consciousness continuously for some time, the state of mind becomes dhyāna; and then if the subject is so much engrossed in that object that he forgets his own existence, i.e. he merges himself in the object, the

state of his mind is called **samādhi** (cf. **samāpatti**).

According to GS, dhyāna is of three kinds-sthūladhyāna, jyotirdhyāna and sūkṣmadhyāna.

According to TBU, in the state of dhyāna brahmaivāsmi ब्रह्मैवास्मि (I am brahman) is the only vrtti (consciousness); otherwise the mind is nirālamba. While dhyāna of Gorakṣa has ātmā² alone for its object. Dhyāna of Gheranda can be of the istadevata or of the guru, or of a light, or of bindu. Patañjali too has not mentioned dhyāna as of purusa¹ or ātmā alone. The duration of dhyana is mentioned by Goraksa to be twenty-four hours. But no such time limit, this side or that, is prescribed by Patañjali or Gheranda. According to YSH, in what he calls dharma dhyāna the $yog\bar{i}$ entertains the bhāvanās (sentiments) of maitrī (friendship), karuna (charity), muditā (happiness) and upeksā (indifference), which are prescribed towards pleasure of others, pain of others, righteousness and unrighteousness respectively. Relin-quishing the body in the state of dharma dhy \bar{a} na the $yog\bar{i}$ goes to the svargaloka स्वर्गलोक (paradise) and enjoys all kinds of divyabhogas दिव्यभोग (heavenly pleasures). After enjoying all this he returns to the earth in a superior body and a respectable family and enjoys all the pleasures that he chooses. Then taking his stand on viveka, having destroyed all karmāśayas by dhyāna,

he goes to the Eternal State (padamavyayam पदमव्ययम्). This is the Jaina theory.

dhyāna-2 ध्यान-२ (VS I 33, 37; IV 19), one of the eight limbs of yoga. Meditation is defined as a stable state of mind and it is said to be six-fold, containing five varieties of saguṇadhyāna and one variety of nirguṇadahyāna.

dhyāna-3 ध्यान-३ (SSP II 38), meditation.

The origin of oneness (i.e. advaita) is the soul. One realise this in every being and sees only singularity. This is known as meditation.

dhyānaja ध्यानज (YS IV 6), that which is taken at will. Karmavipākāśayas, which are cumulative dispositions, inhere in every citta¹. But if God, or a perfect soul like Kapila adopts a citta¹ at will, getting the material for it from asmitāmātra, that citta¹ is really a tabula rasa. It has no predispositions and freely does the work for which it is acquired, unencumbered by kleśas etc.

dhyānayoga ध्यानयोग (KU 18; DBU 1), yoga of meditation. KU claims that through its practice, movement of breathing can be stopped. DBU says that amassed effect of sins can be dissolved by this yoga.

dhyānasthāna ध्यानस्थान (G 88), spot in the body on which concentration is prescribed by the teachers of yoga⁴. All the cakras¹ are such spots. Nine such spots are mentioned by G.

dhyānaheyā ध्यानहेया (NGB II 11), (vṛttis or modifications of citta) which can be sublated by meditation. This can be done through meditation, through the intensity or force of self-realization, until the **vṛttis** become totally unable to produce any more **kleśa**, like the seeds burnt completely of their possibility of reproduction.

dhyeya ध्येय (TBU I 10), an object of which one can have a clear idea. Brahman is not a dhyeya in this sense. In another sense, however, brahman is dhyeyain the sense that It can be an object of dhyāna.

dhruva-1 ध्रुव-१ (TBU I 8), unchangeable -constant, eternal, kūṭastha, (apariṇāmi अपरिणामी). Dhruva is one of the words used to describe the indescribable brahman.

dhruva-2 ধ্রন-২ (VB, VM III 27-8), polestar. Through saṃyama on the polestar, one can acquire the knowledge of the movement of the stars.

aroused sound heard in the state of successful kumbhaka¹ of the bhrāmarī type. It has two components-its nāda and its dhvani. The nāda is obviously the timber and the dhvani the tone, the musical note of the sound. Blended with the dhvani of the sound is the light seen during bhrāmarī kumbhaka¹. The yogī's mind gets absorbed in that light. It is only when this blend of sound and light disappears that the yogī gets merged into what it signifies, viz., brahman.

na-न

nabhojala नभोजल (HP III 70), ambrosial juice. A kind of juice that comes from the soma or candra in the brain.

nabhodhāraṇā नभोधारणा = śoṣaṇī शोषणी (G 73; GS III 80), dhāraṇā on the ākāśa mahābhūta, which is supposed to be there in the brahmarandhra and can be imagined as calm, clear water. Sadāśiva is supposed to reside alongwith the mystic letter ha ह.

Gorakṣa has placed the ākāśa tattva in the brahmarandhra. Gheraṇḍa has not given its location. According to him, nabhodhāraṇā consists in taking the prāṇa¹⁻² to the vyomatattva (somewhere in the body) and keeping it there for two hours.

The practice of this **dhāraṇā** is said to bring **mokṣa** to the $yog\bar{i}$.

nabhomudrā नभोमुद्रा (GS III 1, 9; YCU 45, 58; DBU 80-85;), one of the spiritually oriented mudrās. It consists in raising the tongue, becoming calm and steady and holding what they call pavana or prāṇa³ in the head. Reference is to the cutaneous sensations first felt moving up the back and are then gradually focussed in the head. This mudrā can be practised wherever the yogī may be and whatever he may be doing. Yogīs are advised to practise it incessantly. It is supposed to cure all the ailments of a yogī.

According to DBU, this cutaneous sensation should not be allowed to escape

from the **brahmarandhra**. If however, it escapes and the **nabhomudrā** is broken, it should be raised again from the **yonimaṇḍala** by **yonimudrā**. This is how they have described what is only a complex mental phenomenon. Nothing actually ascends or descends. Only a sensation appears, vanishes, and a similar sensation is generated again. *Gorakṣa*, YSU and DBU equates **nabhomudrā** with **khecarīmudrā**.

The commentators, and perhaps even the composer of DBU, have mistakenly taken bindu to semen. Bindu here means that tiny speck of prāna³, as they call it, which appears to be rising in the back up to the head. Nabhomudrā is the dhāraṇā of this prāṇa3, sometimes called prānadhāranā. For adopting this mudrā G prescribes introducing the tip of the upturned tongue into the kapālarandhra and fixing the gaze between the eyebrows. According to DBU and YSU, the practice of this mudrā wards off disease. death, sleep, hunger and swooning. It is also claimed that in the $yog\bar{i}$ who succeeds in this mudra no karmaśayas are formed; i.e., in the words of Patañjali his actions are all aśuklākṛṣṇa, i.e., aklista and he is in no way bound (= determined) by time.

When the tongue enters the highest dhyānasthāna-brahmarandhra- the citta² also goes to this spot. The nabhomudrā appears to be the same practice as the ākāśadhāraṇā (nabho-

dhāraṇā) of G, GS and HP. According to YSU, if a *yogī* succeeds in raising his tongue so as to press the cavity in the roof of the mouth, the nectar from his head does not fall in the *agni* below, nor does his vāyu⁴ escape. Perhaps what the *Upaniṣatkāra* means is that the pavanadhāraṇā is not broken. It may also mean that kumbhaka is not broken.

namaskārayoga नमस्कारयोग (BVU 56).

According to Upanisadbrahmayogi, the experience 'I am brahman' is namaskārayoga. Recitation of the last thirty verses of this Upanisad is believed to bring this experience. These verses lay down all that brahman can be said to be; though in fact brahman in indescribable. Since when the mudrā (probably what is called jñānamudrā in this Upanisad) is adopted verses like these are recited, the recitation is considered to be cause of the experience. The exciting cause-just as the lighted match-stick thrown on a dump of gun powder-is considered to be the cause of the explosion.

navacakra नवचक्र (SSP II 1-9), nine centres inside the body. These are symbolically called as cakras. They are: brahmacakra, svādhiṣṭhāna, nābhicakra, hṛdayādhāra, kaṇṭhacakra, tālucakra, bhrūcakra, nirvāṇacakra, and ākāśacakra.

navadvārāṇi नवद्वाराणि (BVU 75), most probably nine nervous pathways in the brain which can be successfully made

inactive by **jihvābandha** and thus to conduce **samādhi**. Ordinarily the nine apertures of the human body are called **navadvārāṇi**. They are the two eyes, the two ears, the two nostrils, the mouth, the rectum and the passage for emitting urine etc.

navadhāprānāyāma नवधाप्राणायाम (BY VIII 7), nine-fold classification of prānāyāma. Some yogīs prefer to perform nine types of prānāyāma. According to BY, prāṇāyāma first is divided into three parts, i.e., mrdu, madhya and adhimātra. After this gross division of prāṇāyāma, then each part is subclassified into three like: (1) mrdumrdu, (2) mrdumadhya, (3) mrdu-adhimātra, (4) madhya-mrdu, (5) madhya-madhya, madhya-(6) adhimātra; (7) adhimātra-mrdu, (8) adhimātra-madhya and (9) adhimātraadhimātra.

nāga-1 नाग-१ (TSM 77, 86; SAU I (4) 13; G 24; BVU 67; DU IV 24, 30; YCU 23, 25), one of the five nāgādivāyus¹ (upaprāṇas उपप्राण). The function of this vāyu¹ is said to be udgārādi उद्गारादि (eructation etc.). It appears that GS connects the act of eructing with raising a tactual image of om pronounced by the yogīs and thus indirectly with the experience of internally aroused tactual sensations.

nāga-2 नाग-२ (VS II 42, 50, 53, III 50), one of the ten vāyus. There is a description of ten autonomic functions, called vāyus or life activities in ancient Indian yogic texts. **Nāga** is one of them and is present in skin, bones etc. It takes specially the activity of vomitting (**udgāra**-eructation).

nādī-1 नाडी-१ (HP II 4, 5; GS I 23, 35, III 21, V 2, 33-38, 40-1, 58), any passage inside the body. It may be passage for the breath or may be a part of the alimentary canal or a nerve. Much stress is laid by Gheranda on nadiśuddhi i.e. cleaning of these passages, technique of which is of two kinds: samanu and nirmanu. Various dhautis are prescribed for nirmanu**nādiśuddhi** and what is ordinarily known as prānāyāyāma² (not the eight kumbhakas) is recommended under samanu nādīśuddhi. Nervous efficiency is said to depend on $n\bar{a}d\bar{i}$ śuddhi. According to GS V 38-44, samanu nādīśuddhi consists in inhaling, retaining and then exhaling, repeatedly contemplating the bijamantra of the five mahābhūtas. See nabhomudrā.

nāḍi-2 नाडी-२ (HP III 22, 72, 82, 119-120, IV 43; DU IV 5, 6, 18, 22, 23, V 1, 2, 11; G 16, 17, 19, 23, 25; TSM 67), a nerve or a nerve-centre. These are said to be 72,000 in number of which only fourteen principal ones are mentioned in DU by name. The ten vāyus¹ are said to operate through the nāḍis², thousands of them according to G.

Only ten $\mathbf{n}\mathbf{\bar{a}}\mathbf{\dot{q}}\mathbf{\bar{i}}\mathbf{s}^2$ are named by *Gorakṣa* of which $\mathbf{suṣumn}\mathbf{\bar{a}}$, $\mathbf{\dot{q}}\mathbf{\bar{a}}^1$ and $\mathbf{piṇgal}\mathbf{\bar{a}}$ seem to be nerve centres, and the other

seven appear to be nerves, In GS also the number of $n\bar{a}d\bar{i}s$ is said to be legion and they are all said to arise from the **kandayoni** and go to all the different parts of the body.

In TSM 67, **nāḍis** are said to be 80,000 in number. Of these only ten names are given; the ten **vāyus** are said to operate through them and the twelve gods are said to reside in them.

nāḍi-3 नाडी-३ (TSM 99), respiratory passage. All the respiratory passages, including the cells in the lungs, are required by this text to be filled to capacity by complete pūraka¹.

nāḍi-4 नाडी-४ (TSM 118; HP II 51), passages in the nose. Three of them are mentioned by TSM of which two are the right and left nasal passages, while the third is not mentioned.

It may be the upper passage connecting the right and the left passage or it may be the pharynx. HP uses the word $n\bar{a}d\bar{i}s$ for the two nostrils.

nāḍī-5 नाडी-५ (G 96), a ghaṭī = 24 minutes.

nāḍi-6 नाडी-६ (BY IX 194), nerve. It is specifically termed as hitā where the circle of the lustre of moon is existing. In the central part of it the unflickering light as steady as soul is present.

nāḍi-7 नाडी-७ (VS II 1, 2, 6, 20, 41, 43), nerve or vein. The origin and actual position of nāḍis are explained by Vasiṣṭha. These are as, VS calculates, 72,000 in number. Among them only fourteen nerves are the principal ones, viz., suṣumnā, iḍā, piṅgalā, sarasvatī, kuhū, vāruṇī, yaśasvinī, pūṣā, payasvinī, śaṅkhinī, gāndhārī, hastijihvā, viśvodarā and alambuṣā. Other nerves are originated from these abovementioned fourteen important nāḍīs. VS keeps silence to enumerate fully their names, but clarifies through illustrations of aśvattha leaves in which the veins and sub-veins are automatically originated. The ten vāyus called autonomic functions move in these nāḍīs. SS considers only three nāḍīs. These are iḍā, piṅgalā and suṣumnā.

nāḍikanda नाडीकन्द (VU V 20), an eggshaped organ 2" sq. made up of fat, nervous tissue, bone and blood. It is situated six inches above the genitals. The nāḍicakra surrounds it. This was their idea. Now we know of an anatomical structure called the solar plexus.

nāḍicakra नाडीचक (VU V 22; YSU V 27), disc with twelve spokes of which the hub is the nāḍikanda. The nāḍis² which are the spokes of this wheel-like structure are most probably nerves. They come out of the hub horizontally in twelve directions and then obviously ascend or descend.

nāḍiyoga नाडीयोग (HP V 19), (through) both the nostrils.

nāḍīśuddhi-1 नाडीशुद्धि-१ = nāḍīśodhana नाडीशोधन (HP II 10; GS V 33-5, 45; DU 1-2, 11; YTU 44; SAU I (IV) 14, (V) 3), the process of first inhaling in an orderly manner through the left nostril, holding the breath and exhaling through the right; then inhaling through the right, holding the breath and exhaling through the left-meditating on the inner experience accompanying inhalation, exhalation and retention of breath. This practice is to continue for more than three months. By virtue of this the $yog\bar{i}$ can retain his breath as long as he desires and his appetite is fanned. Besides, the $yog\bar{i}$ maintains his health, hears sounds which are not there loses surplus weight.

nāḍīśuddhi-2 नाडीशुद्धि-२ (VS II 1, 55, 67, 69), a systematic process of purification of nāḍīs. VS suggests various distinct signs of its attainment, such as lightness of body, effulgence, increase of appetite, manifestation of nāda, etc. which indicate the purification of nādīs.

nāda-1 नाद-१ (HP I 43, III 96, IV 1, 29, 67-8, 80, 83-4, 86-7, 89, 93-4, 96-8, 102; GS I 32, V 74, 76, VII 11; NBU 31-56; YSU II 15, VI 70-2; HU 16), the internally aroused sound which is heard when a *yogi* succeeds in **bhrā**marikumbhaka. Such a sound may also be heard as the result of a continued practice of cleansing the auditory canals with the index and ring fingers. In Patañjali's language it is a vişayavatipravrtti. According to GS, nādābhivyakti is a kind of rājayoga and according to NBU, it is nādānusandhāna. Yoga4 leads to liberation following upon samādhi which is samāpatti in nāda. The $yog\bar{i}$ is advised to adopt the **siddhāsana** pose and get into **vaiṣṇavīmudrā**. Then he is asked to listen to an internally aroused sound in the right ear; though all the *yogīs* do not hear the **śabda** in the right ear. It may be localised above the head or on top of the head.

According to YSU nāda, bindu and citta² get blended and all of them merge in brahman when vāsanās are made ineffective by nādānusandhāna. Nādānusandhāna implies cittavṛttinirodha and samāpatti (cf. YS and ATU).

Successful nādānusandhāna is called turyapada by NBU. According to this text, first loud sounds are heard and then, as practice progresses, feebler and feebler sounds are heard. The wavering mind may be allowed to go from one sound to another. From loud to feeble, from feeble to loud, but not beyond the sound to any other object. Whenever and wherever the mind is inclined to be focussed on a super-natural sound, whatever it may be, the $yog\bar{i}$ should get composed and be absorbed in it (cf. Patanjali's samāpatti). Then will follow $samādhi^1$ called $unman\bar{i}$.

In HU, internally aroused sound is said to be heard after one crore repetitions of so'ham (cf. *Upaniṣadbrahmayogī*). According to NBU and YTU, nāda is the subtle (sūkṣma) form of brahman. nāda-2 नाद-२ (HU 8-9), something which rises up the suṣumnā and goes to the head of the *yogī* and, while rising, gives

him a kind of cutaneous sensation. In fact, it is only the sensation which they call $\mathbf{v}\mathbf{\bar{a}}\mathbf{y}\mathbf{u}^{1}$ in this context.

nāda-3 नाद-३ (HP II 78), voice. One of the marks of success in haṭhayoga is said to be a clear voice.

nāda-4 नाद-४ (VS III 38-40, VI 13, 17-8), internal sound as distinct as crystal. This is produced through practice while closing sense-organs, viz. ears, eyes, mouth, and two nostrils by the fingers of both hands. The location of nada is within brahmarandhra of susumnā upto the head. VS states that different sounds are produced there. In the first stage, śankhadhvani-sound produced by a conch-blow, then meghadhvanisound produced by thunder, and lastly, sound like mountain stream, i.e., murmuring sound, are gradually heard. It has also been equated with pure crystal, existing above bindu. It can be revealed only in the heart of a pure person. By meditation on nāda, the scholars who are closely united with pranava behold the great God Rudra.

nādabindukalā नादिबन्दुकला (HP IV 1), the words in this expression do not correspond to their ordinary dictionary meanings. The yogīs had their own terminology. Here the word nāda stands for the internally aroused sound. Bindu stands for the internally aroused light, and kalā is the rich sensation felt all over the body. All these experiences indicate the development of pranic activity in the body. Almighty God, who is

the source of all activities, is said to be of the nature of **nāda**, **bindu** and **kalā**.

nādarūpiṇi नादरूपिणी (VU V 29), one of the four nāḍis² which run inside the spinal column and is responsible for the hearing of sounds without the ear being stimulated by the external sound.

nādānusaṃhāra नादानुसंहार (VB III 17), constructing a whole word or sentence on hearing the constituent sounds which are not all heard simultaneously. This is said to be the work of **buddhi**¹ and not of the ear which only hears discrete

nādānusandhāna नादानुसन्धान (HP I 56, IV 66, 81, 105), absorption in the internally aroused sound which the *yogī* hear. The first four lessons of HP deal in order with the four kinds of haṭha disciplines of which this, the fourth, is given by *Svātmārāma* the name samādhi¹. He considers Nādānusandhāna to be the best of all the layas (= samāpattis).

Descriptions of **nādānusandhāna** given by HP and NBU have much in common. Eight verses in these two text are exactly the same. It is difficult to say who has borrowed from whom. They might have come to both from some common source.

nādābhivyakti नादाभिव्यक्ति (SAUI (5) 4, (7) 8; YCU 99), hearing of sounds without sound waves from outside striking the eardrum. As a result of nāḍi-śodhana, yogis begin to hear such sounds by the practice of prāṇāyāma²

which also includes some **kumbhaka**¹, though **bhrāmarī kumbhaka**¹ is not specially mentioned.

According to YCU 79, the **oṃkāra** of the *anāhatapraṇavadhvani* (the internally aroused sound of **om**) marks the existence of the **praṇava** in the enlightened persons with its face upwards. Without **nādābhivyakti**, the **praṇava** exists in every living being with its face downwards.

nānātva नानात्व (SK 27), plurality (= diversity). There are many sensory and action organs. Though called guṇaviśeṣas they are not the diverse individual transmigrating souls which may be called guṇapariṇāmaviśeṣas. While these guṇaviśeṣas are only eleven, the forms which they assume are really many and various. These forms of the indriyas are the innumerable liṅgas. Patañjali significantly calls cittas¹ aindriya (of the nature of indriya).

nābhi-1 नाभि-१ (G 16, 35, 57, 59, 86; TSM 59, 109-10, 149), one of the nine dhyānasthānas. It is situated above the meḍhra and below the hṛdaya. It swallows the amṛta which oozes from the candra.

nābhī-2 नाभि-२ (VS II 12, III 63, 69-70), navel. The navel is situated ten and half fingers from the penis and fourteen fingers from the middle of the heart. It is also one of the marmasthānas. The middle part of the kanda is called nābhi (navel) from where cakras originate. nābhigranthi नाभिग्रन्थ (GS I 19, III 12), navel-knot, To get rid of abdominal diseases and for increasing the gastric heat, one should push the nābhigranthi against the spine a hundred times. During the practice of mūlabandha mudrā, one should press the nābhigranthi also against the spine with great effort.

nābhicakra-1 नाभिचक्र-१ (YS III 29), the internal organ in the navel region. Imagined as a wheel it has sixteen spokes and like a lotus it has sixteen petals. The yogī who succeeds in saṃyama on this organ gets an insight into the entire anatomy of his body. This organ appears to be the same as is called nābhikanda in G and TSM.

nābhicakra-2 नाभिचक्र-२ (SSP II 3), third cakra in the series of nine cakras, known as maṇipūra. Nābhicakra is encircled like a serpent with five coils. This is the region of kuṇḍalinī śakti which is as red as rising sun. Meditating upon it gives all accomplishments.

nāmadheyā नामधेया (NBU 10), the fifth mātrā (component) of the dvādaśamātrā om. If a mantrayogī dies while he is at this mātrā of the praṇava he is reborn in the candraloka, enjoys a god's life there and is held in high esteem by other gods.

nāraka नारक (VB II 12, 34, III 18, IV 8), one of the four kinds of life well-known in ancient Indian literature. The nārakas are supposed to live in some kind of hell. nāradeva नारदेव (HP I 8), the name of a mahāsiddha of unknown identity. It is said that great siddhas move about in the universe breaking the law of death by the power of haṭhayoga. Nāradeva is one of them.

nārāyaṇa नारायण (BY VII 31, 33), name of God viṣṇū. Since nārā (= water) is the abode of viṣṇu, he is called nārāyaṇa. The God nārāyaṇa is the enjoyer of the religious vows, mortification, yamas, niyamas, and sacrificial rites and who is meditated upon by yogīs, should be remembered at the time of rites of bathing as well as expiation. By this, one is relieved of all the misdeeds.

nārī-1 नारी-१ (NBU 11), the eleventh of the twelve mātrās (components) of the dvādaśamātrāpraṇava. If the mantrayogī dies while he is at this mātrā of the praṇava, he is reborn in the tapoloka. (cf. nāmadheyā).

nārī-2 नारी-२ (HP III 84), the citrā nādī, optimum functioning of which is essential for vajrolīmudrā.

nārībhaga नारीभग (HP III 86), pelvic region. Nārībhaga here implies the entire region from the navel down to the thighs. The lower portion of this region is supposed to ooze a juice which is to be raised upwards and mixed with the secretion from the ājñācakra at the latter's place of secretion. Bhaga in Sanskrti means sūrya. While the juice oozing from the ājñācakra is supposed to be cool, the juice secreted from nārībhaga is supposed to be hot.

nāsāgradṛṣṭi नासाग्रदृष्टि (G 9; YCU 106), gazing at the tip of the nose. While performing **padmāsana** the aspirant is advised to gaze at the tip of the nose.

nāsāgrāvalokinī नासाप्रावलोकिनी (TBU 1, 29-30), that which is fixed on the tip of the nose. The jñānamayīdṛṣṭi of this Upaniṣad is not the ordinary nāsāgradṛṣṭi of the yogīs, which is here called nāsāgrāvaloknī. In the jñānamayīdṛṣṭi, there is neither a draṣṭṛ nor a dṛṣṭi, there is neither a draṣṭṛ nor a dṛṣṭi, and hence no darśana in its ordinary sense. It is of the nature of Patañjali's samāpatti.

nāsānāla नासानाल (HP II 30), cavity of nose. While performing netikriyā, one should insert through the nāsānāla a smooth nine inch long piece of thread and pull it out through the mouth.

nāsābhyantaracārī नासाभ्यन्तरचारी (KU 5), moving inside the nostrils. In the state of kumbhaka the breath does not go out of the mouth or the nostrils. In this state, the prāṇa is said to be circulating inside the sādhakas body with the mouth and the nostrils closed.

nāsāmūla नासामूल (VS III 64, 71), the root of nose. It is one of the eighteen marmasthānas. Nāsāmūla (the root of nose) is four fingers from the root of the tongue.

nigamasankula निगमसंकुल (HP IV 40), conflicting views expressed in the nigamas, i.e., the Vedic texts. This obstructs the understanding of the tāraka.

nigarbha निगर्भ (GS V 47, 54), one of the two kinds of sahita kumbhaka, the other being sagarbha. No bijamantra is mentally recited in this kind of **sahita kumbhaka**.

nijāśakti निजाशक्ति (SSP I 5, 8), recognised as power of ādinātha. Nijāśakti has five characteristics: nityatā, nirañjanatā, niṣpandatā, nirbhāsatā and nirutthānatā.

nitya-1 नित्य-१ (VS III 56), eternal. (cf. mahāprāṇa)

nitya-2 नित्य-२ (VS III 60, IV 68-9), obigatory (duties). Performing obligatory duties with one's self without the help of any external means is supposed to be pratyāhāra, according to VS.

nityanātha नित्यनाथ (HP I 7), one of the nāthayogis of indefinite nomenclature.

The name has been enumerated by Svātmārāma as a mark of salutation.

nityatva नित्यत्व (VB, VM IV 10), permanance. Subconscious impressions have no beginning since the desire is permanent. The desire for one's self never loses its permanent character because subconscious impressions have no assignable beginning.

nityamadhyamā नित्यमध्यमा (VS II 18), a synonym for kuṇḍalinī. Since it always resides in suṣumnā it is called nityamadhyamā. Madhyamā here refers to the passage of suṣumnā.

nidrā-1 निद्रा-१ (YS I 6, 10), one of the five cittavṛttis (= cognitive mental processes). The western mentalistic psychologists would not call it a process of consciousness, as it is dreamless. The content of this process of cognition according to Patañjali however, is

abhāvapratyaya. Abhāva is recognised by some schools of Indian philosophy as a category in itself. Perhaps *Patañjali* refers to such an abhāva when he calls it the content of nidrā.

nidrā-2 निज्ञा-२ (MBU I (1) 3, (2) 1, II (3) 2; YKU I 59), sleep including both svapna and suṣupti, i.e., dreaming and dreamless sleep respectively, it is one of the dehadoṣas (physical obstacles). It is of a phychological origin and its psychological remedy is said to be tattvasevana (perhaps the same thing as ekatattvābhyāsa which Patañjali prescribes for warding off obstacles in the path of yoga¹).

nidrājñāna निद्राज्ञान (VB, VM I 38), awareness during sleep. Perception in sleep as its supporting object gains stability of mind (manasasthitinibandhana).

nibandhana निजन्धन (G 42), direction (= control = systematising of an activity).

Prāṇāyāma which 'G' calls prāṇa-saṃyama and prāṇanibandhana, therefore, means controlling and regulating the activity of prāṇa in both its meanings-breath and the sensation which is felt by the yogīs as something rising up along the back.

nimitta-1 निमित्त-१ (YS IV 3), determining tendency. Most probably reference here is to the vāsanās formed in citta¹.

These do not determine the time of death; nor do they bring about death. Physiological conditions are responsible for these; though the kinds of birth

that the individual takes after death is determined by the dispositions of the individual.

nimitta-2 निमित्त-२ (VB IV 9), cause. A cause may bring about its effect immediately or in the remote future. But the causal relation holds even when the effect is remote consequent of an antecedent phenomenon.

nimittanaimittikaprasaṅga निमित्तनेमिति-कप्रसंग (SK 42), the causal relation. The theory is that dharma and adharma determine the kind of śarira (body) which a sūkṣmaviśeṣa (the transmigrating soul) takes. Since dharmādharmas are acquired by karma, in Patañjali's language the relation between a karmāśaya and its vipāka would be nimittanaimittikaprasaṅga (YS II 13). According to Vyāsa, dharmādharmas are acquired by kindness and cruelty, respectively, to others (VB II 5 & IV 9, 11).

niyata-1 नियत-१ (SK 39, 40), comparatively permanent-here said of sūkṣma-viṣeśas. A mātāpitrjaviśeṣa (= body) is impermanent as compared to the sūkṣmaviśeṣa (the transmigrating soul) to which it is attached. While the body perishes the soul does not perish with it, though it too is impermanent as compared to its puruṣa¹. In course of time, it undergoes pratiprasava which is out of the question for puruṣa¹.

niyata-2 नियत-२ (VB II 13), determined and necessary. The karmāśayas (dispositions) whose vipāka (fruition) is

fixed and necessary cannot be got over in any way. The **aniyatavipāka** अनियत-विपाक ones, can however, be effaced altogether or merged in other **karmāśayas.**

niyatamānasa नियतमानस (BG VI 15), restrained mind. One who has attained this stage by constant yogic practice attains the abode of the Lord viṣṇu.

niyatavipāka नियतिवपाक (VBh II 13), fixed result. Many karmāśayas (dispositions) pile together in one birth is said to be ekabhavika karmāśaya (dispositions in one birth). It is of two types: (1) niyatavipāka, and (2) aniyatavipāka. That karmāśaya which is unrestrained, has no obstacle, no remainer and is not over-powered by another deed is named as niyatavipāka.

niyama-1 नियम-१ (YS II 29, 32; HP I 38; DU I 4, II 2; MBU I (1) 4; SAU I (1) 2, (2) 1; YTU 24, 29; VU V 11, 14), one of the components of yoga¹. Patañjali has mentioned five niyamas: śauca, santoṣa, tapas, svādhyāya and iśvarapraṇidhāna. YTU considers niyama to be one of the twenty members of haṭhayoga and ahiṃsā to be the principal niyama. No other niyamas are mentioned in this text. HP also considers ahiṃsā to be the principal niyama.

VU and many other texts on **yoga**⁴ enumerate ten **niyamas**.

niyama-2 नियम-२ (TBU I 15, 18). Although it is never said in this text that yoga¹ is aṣṭāṅga अष्टांग, eight yogāṅgas are described one after the other and each is decribed in two ways: clearly seeing the distinction between empirical objects and Reality **brahman** is one description of **niyama**², the other being only a traditional enumeration of the ten **niyamas**.

niyama-3 नियम-३ (HP I 15), observances like bathing early in the morning, eating only at night, in other words fasting, are called niyamas by this commentator (*Brahmānanda*). He does not recommend this theory to yogīs.

niyama-4 नियम-४ (HP II 14), restrictions about food etc. According to this text, these must be observed by *yogīs* in the beginning but can be released after the practice is well established.

nivama-5 नियम-५ (VS I 33, 35, 53, 83; SSP II 33), vows. It is the second among eight vogāngas. It is ten in number. They are: tapas (austerity), santosa (contentment), āstikya (thesim), dāna (charity), īśvarapūjana (worship of God), siddhāntaśravana (listening to the doctrines), hri (modesty), japa (repetition of a mantra), mati (decision), and vrata (observance of vows). SSP defines it as restraining all the activities of manas (mind). For this he describes to dwell in aloof, nonattachment, indifference, contentment over what is acquired, absence of sentiment and devotion to the feet of guru. niyama-6 नियम-६ (TBU I 15, 18), second in the order of the fifteen-fold yoga, which consist in application of consciousness in accepting conducive (practices and behaviours) and rejecting the non-conducive ones. Such a practice of **niyama** bestows pleasure.

niyamāgraha नियमाग्रह (HP I 15), persistence in following vows. One of the six disturbing factors in the path of yoga. Hence vows should not be severe. The other five disturbing factors are prayāsa, prajalpa, atyāhāra, janasaṅga and laulya.

nirañjana-1 निरंजन-१ (ABU 8), absolutely pure (untinged by māyā or guṇas¹). Hence it means nistraiguṇya (devoid of three guṇas) and is one of the many qualities mentioned to describe the indescribable brahman.

nirañjana-2 निरंजन-२ (HP I 7), name of a mahāsiddha of indefinite nomenclature.

nirañjana-3 निरंजन-३ (SSP I 19), blemishless. There are five qualities of nirañjana. They are satyatva (reality), sahajatva (self-created), samarasatva (evenness), sāvadhānatva (attentiveness), sarvagatva (omnipresence).

nirañjanapada निरंजनपद (HP IV 1), the state beyond all darkness. Śiva and guru are said to be of the nature of nāda, bindu and kalā. By offering salutations to them, one attains nirañjanapada, the state beyond all darkness.

niratiśaya निरतिशय (VB, VM I 25), unexcelled. The knowledge of objects (either singly or collectively whether in the past, present or future, either small

or great), surpasses all the limits is called **niratiśaya.** He in whom this being expanded becomes unexcelled, omniscient.

nirahaṅkāra निरहंकार (TBU I 3), people who believe that **brahman** is the only self and that they are that-not themselves. These are the people who ultimately realise **brahman**.

nirākāra निराकार (TBUI 6; G 92), having no form. This is one of the ways in which the indescribable **brahman** is often referred to.

nirākula निराकुल (HP II 40), devoid of fickleness. Here it refers to the state of citta. This state of citta devoid of fickleness is acquired through the practice of kumbhaka.

nirātanka निरातंक (G 92), perfectly peaceful. It is one of the six attributes of ātmā mentioned by *Gorakṣa*.

nirāmaya निरामय (G 92), without any disease or affliction. Since ātmā is not a living body, it cannot be subject to the bodily ills. Nirāmaya is one of the six attributes of ātmā according to G.

nirālamba निरालम्ब (TBU I 36), the state of mind in which there is no object of cognition other than the *yogī's* own self, which is the **brahman**. This is the state of mind in **dhyāna** according to this text.

nirāśraya-1 निराश्रय-१ (G 92), not needing any support. There is nothing more real than ātman (G's tattva). Ātman is the support of everything. Everything exists in Him and there would be nothing if there were no such ultimate reality.

nirāśraya-2 निराश्च-२ (SK 41; G 92), without any individual form in which it can exist. Since every linga¹ is a sūkṣma viśeṣa, there would be no liṅgas if there were no such form of existence as the viśeṣas-sūkṣma, mātāpitṛja and prabhūta. It is in this sense that Īśvarakṛṣṇa considers liṅgas to need a support. Brahman (ātmā), however, does not need any form to exist in. It can exist without taking any particular form. Ātmā is, therefore, nirāśraya in this sense also.

nirāhāra निराहार (GS V 31), not eating. In the beginning of yoga practice, one should not resort to nirāhāra.

nirutthāna निरुत्थान (SSP V 8), a state where distinction between I and He merges into the Supreme. By constant concentration on one's own self, one reaches the state where one experiences oneself everywhere. Even one experiences no distinction between oneself and the Supreme. By constant practice one does not come below from that state. It is known as nirutthāna state

niruddha-1 निरुद्ध-१ (VB II 54), not functioning. When the citta² is not functioning, the sense and action organs also cease to function for satisfaction of desires. In other words, no desires arise. This is pratyāhāra.

niruddha-2 निरुद्ध-२ (VB I 1), one of the five cittabh $\bar{\mathbf{u}}$ mis (state of the mind).

It is the state in which **citta**¹ is reduced to a mere potentiality and no **vṛttis** whatsoever are arising in it, i.e. it is **niruddha.**

nirupakrama निरुपक्रम (VB III 22), without intensive activity. The action whose fruition in the life-period is of two-fold-sopakrama (intensive activity), and nirupakrama (without intensity). Of these, first one gives the fruit quickly and the other slowly. As a wet cloth when furled up takes a long time to dry, or as fire being set to pieces of straw spread gradually out of a heap burns slowly, so is the slowly fruitive action. (cf. sopakrama).

nirupakramakarma निरुपक्रमकर्म (YS III 22), karma (action) which is slow in bringing about its vipāka (fruition). According to Patañjali, some actions are slow to yield a result, while others are quick. The latter are sopakramakarmas.

nirodha-1 निरोध-१ (YS I 2, 12, 51, III 9), complete cessation. Cittavṛttinirodha is obviously a complete cessation of the ordinary cognitive functions of the mind, i.e., citta² vṛttis. It is a complete cessation of all such vṛttis, and not a partial extinction, as VB holds; because in samprajñātayoga, samāpatti takes the place of vṛttis. Samāpatti is clearly different from citta² vṛttis, as the latter are of the nature of subject-object relation which becomes out of question when samāpatti ensues. The states of samprajñātayoga are called

nirodhapariņāmas by *Patañjali*. They are **niruddha**¹ **cittas**.

nirodha-2 निरोध-२ (VB, VM I 1), restriction. There are five stages of citta (mind), and out of these ekāgrabhūmi (the stage of one-pointedness) leads the mind towards nirodha (restriction) which ultimately results in samprajñātayoga.

nirodhapariṇāma निरोधपरिणाम (VB, VM III 9), modification of restraint. This state belongs to **citta** when it undergoes the subliminal expressions of restraint every moment. Then it is called modification of restraint.

nirodhasamskāra निरोधसंस्कार (YS III 9), subliminal expressions of restriction. These are external aspects of citta. When all modifications are restrained in the state of asamprajñātasamādhi, still samskāras remain there. Because it is not in the form of function of citta. nirodhasamādhi निरोधसमाधि (VM I 19), tranquillisation through total cessation. It is the same as asamprajñāta or nirbīja samādhi. It is of two kinds, viz., upāyapratyaya (spiritual means) and bhava-pratyaya (worldly means). nirguna निर्गण (BY II 73; G 77), separate from qualities. Absence of qualities or absolute. There are two types of meditation, i.e., saguņa and nirguņa. Former is with the object characterised while latter one is without any distinguished features or attributes, called absolute meditation on Supreme Self. nirnaya निर्णय (VB IV 25), search for a

solution. According to VB, some people are troubled by atmabhavabhāvanā. They are from the beginning interested in the search for a solution of any problem such as "Who am I?", "How am I?", "What am I?", "What will become of me?" For them the question of self-realization does not arise. Others are no longer troubled by this bhavana after they have realised the truth. This $s\bar{u}tra$ refers to the latter. nirdvandva निर्द्वन्द्व (TBU I 3), a person who is not disturbed by pair of opposites like not cold, pleasure and pain etc. A state of lasting homeostasis can be brought about by āsana. It is implied in **āsana** according to VB. The person who is thus steady realises brahman, according to TBU and not the person who cannot remain steady for any length of time.

nirbijasamādhi-1 निर्बीजसमधि-१ (YS I 51), samādhi which has no sthūla (= gross) or sūkṣma (= subtle) viṣaya (= object) for its prajñā = content), but only an ālambana (object of consciousness) of the nature of ānanda, asmitā, or both, which Patañjali does not call visayas in this context.

nirbijasamādhi-2 निर्बीजसमाधि-२ (VBh I 18, 51), seedless samādhi. According to the concept of samādhi, citta functions continuously upto the last stage of samprajñāta only, where citta again can come to enjoy the mundane objects whereas the state of nirbija samādhi does not give rise to any such scope.

nirmanu निर्मनु (GS V 36), one of the two kinds of nāḍīśuddhis (= purificatory observance), the other being samanu. It is achieved by performing the various dhautis (cf. nāḍī). There is no question of reciting any mantra for achieving nirmanu nāḍīśuddhi. It seems to be a purely physical process.

nirmala निर्मल (KU 11, 18; G 87, 99), clean. When applied to the edge of a weapon it is simple cleanliness. But when applied to the edge of yoga (dhyāna or dhāraṇā) it means clean in another sense. This purity consists in shedding avidyā and other kleśas.

nirliptam निर्तिप्तं (GSI9, 11), detachment. It is one of the seven achievements of the ghaṭasthayoga taught by Gheraṇḍa. Its essence is shedding of the vikāras which make a jīva¹ brahman. The means of bringing about the nirlipta is said to be samādhi¹. Thus nirlipta is not only vairāgya. It is the realization that one is not one's body but the ātmā². Nirlipta is implied in samādhi¹ and no hard and fast line is drawn between the two in this text.

nirvāṇacakra निर्वाणचक्र (SSP II 8), eighth cakra in the series of nine cakras (known as sahasrāra or brahmarandhra). Nirvāṇacakra is very sharp like the tip of a nail. The jālandharapīṭha is situated here which shows the way of salvation.

nirvāṇapada निर्वाणपद (TSM 165), nirvāṇa (salvation). The yogin, who knows the nature of universe which is an aggregate of illusion, like objects of dream attains the state of salvation.

nirvikāra निर्विकार (TBU I 37), that in which there is no change. While dhruva implies absence of movement from place to place, nirvikāra refers to change of form. The indescribable brahman is spoken of as dhruva as well as nirvikāra.

nirvicāravaiśāradya निर्विचारवैशारद्य (VB, VM, VBh I 47), clarity of mind of super-reflective state. VB defines the term vaiśāradya as a pellucid unmoving flow of sattva-intelligence having the nature of brightness. It is not overpowered by rajas and tamas, and is free from dirty, impurecovering. VBh further explains that clarity is continuous flow of citta which grasps the reflection of the object in all its special aspects (dhyeyagataśeṣaviśeṣaprati-bimbavadgrāhī ध्येयगतशेषिवशेषप्रतिम्बवद्ग्याही).

nirvicārā निर्विचारा (VB, VM I 44), superreflective balance state. In connection with subtle objects, samāpatti is divided into two parts, viz., savicārā and nirvicārā. The term nirvicārā as explained by VB refers to subtle objects at all times and at all places, and is not limited by past, present and unpredictable qualities. It is the basis and essence of all properties.

nirvicārāsamāpatti निर्विचारासमापत्ति (YS I 44), samāpatti on a sūkṣmaviṣaya not complicated by simultaneous association (vikalpas). It is one of the four forms of sabījasamādhi.

nirvitarkāsamāpatti निर्वितकांसमापत्ति (YS I 43), samāpatti on a gross object (object which is not sūkṣma) which is not complicated by simultaneous association.

nirviṣaya নির্বিষয় (ABU 2), free from all desires. The person who is concerned only with satisfaction of his or her desires remain in bondage. Freedom from all desires, on the other hand, leads to liberation.

nivartana निवर्तन (VB, VMI1,3), ceasing, stop. The nature like quiescent, cruel and infatuated (mūḍha) which are falsely attributed to puruṣa, have ceased as a result of the practice of yoga.

nivṛttaprasava निवृत्तप्रसव (SK 65), relieved of all drives (= quiescent). Prakrti1 is supposed by SK to be endowed with a drive for benefitting the purusa¹ with which it is in samyoga in some form. Hence when the object of the purusa¹ concerned is achieved, prakrti¹ in that particular form becomes quiescent and then ensues the state of kaivalya for the purusa¹. Pratiprasava of prakrti¹ is a significant expression for the endresult, so far as that form of prakrti is concerned. When a puruşa1 attains kaivalya, prakṛti in the form in which she was in samyoga with that purusa¹, ceases to exist.

nivrttaphalasanga निवृत्तफलसंग (VS IV 68), detachment from the desire of result or without expecting the result of action performed. When a person performs his regular duties together

with the practice of aṣṭāṅgayoga with wisdom the salvation lies on his hands. nivṛtti निवृत्ति (BY XI 39), unattached duty. Not associated with duty performed. One who resorts to nivṛttakarma becomes identified with brahman.

niśā निशा (HP III 122), literally niśā means night. But here the word stands for kumbhaka. Usually there is an absence of activities at night, so also is the case with kumbhaka. There is an absence of respiratory activities during the kumbhaka. Thus absence of activity is characteristic of both niśā and kumbhaka. Even this niśā (kumbhaka) is futile if it is not practised with the sole aim of attaining rājayoga.

niścaya-1 निश्चय-१ (TSB 6), work of the buddhi component of ākāśa¹. Its function is 'ascertaining', which is one of the five antaḥkaraṇavṛttis, as opposed to the vṛttis¹ of sense and action organs, which are the bāhya karaṇas. niścaya-2 निश्चय-२ (HP I 16), determination. Steady or definite decision. This is one of the important factors for getting the success in yoga. Without firmness and determination one cannot get success in yogic practices.

niścayātmaka निश्चयात्मक (TBU I 50), that about which there are no doubts (= brahman). The object of yoga, according to this *Upaniṣad* is the realisation of brahman which is niścayātmaka. niścala-1 निश्चल-१ (ABU 21), immovable (= unchangeable). The puruṣa¹ of the sāṅkhya philosophers is niścala and

so is the **brahman** of **Vedānta**. **Niścalatva** (immovability) is one of the qualities mentioned here to describe the indescribable **brahman**.

niścala-2 নিম্বল-২ (HP II 2), steady. State of serenity. Mind becomes steady when breathing is controlled.

niścaladrsti, निश्चलदृष्टि (HP II 32), niścala means without any movement and drsti means eyes. So the word means 'constant eyes'. In connection with the technique of trāṭaka, it is necessary to keep eyes constantly opened. niḥśvāsa नि:श्वास (ANU 33; MBU I (2) 1), inhalation. The number of inhalations per twenty-four hours, as mentioned in this Upanisad, is 1,13,180. It is not clear how this number is arrived at. The rate of respiration is given correctly in Gheranda Samhitā as fifteen per minute and this is also mentioned by Upanisadbrahmayog \bar{i} as the rate laid down in śruti. In this way, the number of inhalation in twenty-four hours comes to 21,600 only. MBU has used this word for sighing, presumably in sorrow.

niṣkala-1 निकल-१ (ABU 8, 21; BVU 17, 19, 20, 33, 37-39, 54; SAU III (1) 3, 4), having no phases or parts and hence unbreakable and unchangeable. Since *kala* means to measure, niṣkala can also mean immeasurable. It is one of the qualities mentioned to describe the indescribable **brahman**.

niṣkala-2 निष्कल-२ (BY II 106), literally means partless or spotless. The 64th

kind of oṃkāra is termed as niṣkala. niṣkalabrahma निष्कलब्रह्म (SAU III 4), indivisible. There are three forms of brahman. One of them is indivisible. The other two forms of brahman are sakala and sakalaniṣkala.

nispatti निष्पत्ति (YTU 20; VU V 72, 75; HP I 40, II 76, IV 69, 76) one of the four stages (avasthās) of yoga4. Nispatti is not described in YTU; but since it is said to be nispanna निष्पन्न (perfected) by rājayoga, success in rājayoga may be nispatti. Perfection in yoga in thus called the nispatti stage of **voga**⁴. According to VU also it is the last of the four bhūmikās. It is here said to be the acme of tapas. According to HP, when this stage is reached and the apānānila has successfully pierced the **rudragranthi**, then the $yog\bar{i}$ hears a sweet musical sound and is said to become like God himself and capable of creating a whole universe.

niṣprapañca निष्प्रपंच (G 92), one without a second and without any complications. This is how the knowers of truth describe the indescribable ātman².

niḥsaṅga नि:संग (KU 21), free from all attachments. Vairāgya is a part of the yoga, without which dhāraṇā will not be successful in cutting (severing all connections from) suṣumnā. The yoga of this Upaniṣad consists of (1) prāṇāyāma², (2) pavanadhāraṇā (cf. Gheraṇḍa III 9) and (3) manodhāraṇā. It is dhyānayoga whose essence is Patañjali's saṃyama.

niḥsvana नि:स्वन (G 97), not hearing any sound. In the state of samādhi¹ the jaivatanmātrās in the sense organs do not perform their function of sensing. Hence no sound is heard.

nīlajyoti नीलज्योति (MBUI(2)7), the blue light which is seen between the eyebrows, or inside the chest, when the mind is concentrated on the sound which is heard as the result of waking up of the kuṇḍalinī¹. The sound and the light are pravṛttis in Patañjali's language, divyaśabda दिञ्चशब्द and divayarūpa दिञ्चरूप in VB's language.

neti नेति (GS I 12, 50), one of the saṭ-karmas. It consists in inserting a thin thread, about half a cubit in length, into the nose and taking it out by the way of the mouth. The practice of this karma is here said to give one the ability of remaining suspended in the air without a support. It also cures kaphadoṣa and brings the ability of clairvoyance.

netrasthāna नेत्रस्थान (VS III 72), area or place of eyes. The spot of eye is half finger from the root of nose. One of the eighteen vital points.

nauli नोलि (HP II 22, 34, 35), one of the satkarmas. It is said to consist in bending the shoulders forward and rotating the abdomen right and left with the speed of a fast rotating whirlpool. In fact the abdomen is not rotated. The recti quickly change their place from right and left sides to the middle and back and vice versa and it appears to the onlooker that the abdomen is being

rotated. It is claimed that this practice prevents and cures all abdominal diseases.

nyāya ८६न्याय (ABU 5), illustration. The essence of dhyāna and jñāna, according to this Upaniṣad consists in hṛdisannirodha हृदिसन्तिशेष. The rest is all illustration and elaboration (= vistāra विस्तार). nyāsa न्यास (BY V 1, IX 184), literally nyāsa means depositing, placing, or entrusting. The arrangement of the form of oṃkāra is also termed as nyāsa. The state of joining or connection of pradhāna with puruṣa is specifically called as nyāsa.

pa-प

pakṣapāta पक्षपात = vinirmukti विनिर्मुक्ति (ABU 6), being none-neither this nor that of certain pairs of possible alternatives, e.g. brahman is neither cintya nor acintya. Words cannot describe Him, and thus brahman is not cintya. But in a different sense He is not acintya. Though He cannot be described in words, He can be realized by yoga⁴.

paṅkaja पंकज = padma पदा (G 11, 82; YCU 4, 7), lotus. Of the five cakras mentioned by G only two are described by him as lotuses. Ādhāra is said to be a paṅkaja (lotus) having four dalas दल (petals) which will be called four asrāḥ असा: (spokes) if ādhāra is compared to a cakra (wheel). Hṛdaya is called a padma (hṛtpadma), which also means lotus.

In the **nābhi** there is said to be the tenpetalled lotus, in the middle of the two eyebrows the two petalled one, and in the **brahmarandhra** the thousand petalled one. (cf. **cakra**). The question whether these **padmas** are clearly marked anatomical structures is awaiting scientific research.

pañcadeva पञ्चदेव (VS IV 5), five deities.

Those are brahmā, viṣṇu, rudra, mahat-tattva and avyakta (unmanifested Supreme Lord), residing in earth, water, fire, air and ether respectively. pañcadosa पञ्चदोष (MBU I (2) 1), five blemishes, krodha, kāma, niḥśvāsa, bhaya and nidrā (anger, sex, sighing, fear and sleep respectively) are here said to the five blemishes of the body. pañcadhāraṇā पञ्चधारणा (GS III 2), dhāraṇā on the five mahābhūtas one

pañcapañcaguṇayoga पञ्चपंचगुणयोग (SSP I 13-15), group of five guṇas, each having five-fold aspects, thus making the total of twentyfive guṇas. The five guṇas are nijāśakti, parāśakti, aparāśakti, sūkṣmāśakti, and kuṇḍalinī śakti. These are said to be the guṇas of saguṇa parameśvara.

by one.

pañcamaṇḍala पञ्चमण्डल (BY IX 128), five circles. Ātman is said to be encircled by five maṇḍalas or circles. They are pañcakośas, pañcaprāṇas, pañcatanmātrās, pañcamahābhūtas and pañcajñānendriyas.

pañcamapada पञ्चमपद (BY IX 10), fifth region of the practice of oṃkāra. This state is identified in the mūrdhā (upper palate). The former four stages are

located in **nābhi**, **uras**, **hṛdaya** and **kaṇṭha**. **Om** is vibratory in its first four stages but becomes non-vibrating when it reaches the fifth or highest stage.

pañcavarṇa पञ्चावर्ण (VS IV 4), five letters, these are-ya, ra, la, va and ha. During dhāraṇā on five gross elements these letters also should be meditated upon along with the elements.

pañcaviṣaya पञ्चविषय (SK 34), five kinds of things that can be heard, touched seen, smelt or tasted. Pāṇi, pāda, pāyu and upastha are the karmendriyas (action-organs) which have to do with all of them; while vāk is the karmendriya which has to do with speech alone. Speech cannot be touched, seen, smelt or tasted. It can only be heard. What we do with other organs may be heard, or touched, or smelt or tasted, or perceived with two or more senses simultaneously.

pañcaśāka पञ्चशाक (HP; I 62; GS V 20), jīvantī (Dendrobium Macrae), vāstu वास्तु (Chenopodium), matsyākṣi मत्स्याक्षी (Alternanthera Sessiles), meghanāda मेघनाद (Amaranthus Spinosus) and punarnavā पुनर्नवा (Boerhuvia Diffusa), the five leafy vegetables which are supposed to be good for the yogīs. Now-a-days they are used more as medicines than as food.

Gheraṇḍa gives a different list of these leafy vegetables, they are bālaśāka, kālaśāka, patolapatraka, vāstuka and himlocikā. These five leafy vegetables are recommended for a yoga practicant.

pañcaśikha पञ्चिशिख (SK 70), the teacher whom Āsurī gave the knowledge which he, in his turn, got from Kapila, the founder of the Sāṅkhya system of philosophy. Pañcaśikha taught this lore to many aspirants.

pañcasrota पञ्चस्रोत (HP III 52), the passage from the two nostrils, the two ears and the buccal opening which meet at the cavity in the upper palate. Pressing this hollow with the tip of the tongue is a part of the khecarimudra. pañcāgni पञ्चाग्नि (YSU V 28, 35), five forms of fire (residing in the body): (1) pātāla पातल (kālāgni कालाग्नि bhūtāgni भ्ताग्नि) in the muladhara, (2) vadavā वडवा (kāsthapāsānayorvahni काष्ठपाषाण-योर्वहिन) in the bones, (3) pārthiva पार्थिव (kāsthapāsānāgni काष्ठपाषाणाग्नि) in the stomach, at the spot where the bile duct opens, (4) vaidyut (svāntarātmakāgni स्वान्तरात्मकाग्नि) in the antariksa अन्तरिक्ष probably in the ear and (5) sūryarūpā सूर्यरूपा in nābhimaṇḍala. These constitute the sūksmavapu सक्ष्मवप (subtle bodies) of brahman. In another context nāda is said to be the sūkṣmarūpa सूक्ष्मरूप (subtle body) of brahman.

pañcāvasthā पञ्चावस्था (MBU II (4) 1), the five states of human existence; viz. jāgrat, svapna, suṣupti, turīya and turīyātīta.

pañcīkaraṇa पञ्चीकरण (TSB 9), the five mahābhūtas mixing in such a way that each resultant has in it a fraction of each mahābhūtas e.g. jñāna, which is here said to be a kārya of ākāśa, has in it

the other four mahābhūtas also. It is ½ ākāśa, ½ vāyu, ½ vahni, ½ ap and ½ pṛthvī. According to this text, the entire creation is thus made up of the five mahābhūtas.

pataṅginī पतंगिनी (NBU 9), the third of the twelve mātrās of the dvādaśamātrā praṇava (oṃ of twelve components). If a yogī dies while he is at this mātrā of the praṇava, he is reborn as a vidyādhara विद्याधर- a class of semidivine beings.

pathya पञ्च (HP I 62, III 15), wholesome. The good grains, wheat, rice, barley and sastika ঘতিক (a special variety of rice), milk, ghee, sugar, butter, sugarcandy, honey, dry ginger, the patolaka पटोलक fruit (paravala परवल a kind of cucumber) the five leafy vegetables, greengram and rain-water collected when the sun is in maghā महा (the 10th lunar mansion) etc. are considered to be wholesome food for advanced Yogīs. But according to the text, there is nothing wholesome or unwholesome for a person who has mastered mahāmudrā.

padārathabhāvanā पदार्थभावना (VU IV (1) 3, (2) 2), right conception of the substance (brahman)-this is the sixth stage of knowledge.

padma-1 पदा-१ (HP 1 23; YTU 29), padmāsana¹.

padma-2 पदा-२ (YCU 5; G 82), paṅkaja. padma-3 पदा-३ (HP III 2, 3) cakra. Here the padma is identified with cakra viz. mūlādhāra, svādhiṣthāna, maṇipūra, anāhata, viśuddha, and ājñā cakras. AS soon as the kuṇḍalinī is aroused by the grace of guru these six cakras are pierced.

padmāsana-1 पद्मासन-१ (HP I 23; II 7; G 9; GS II 8; YTU 29), one of the four āsanas particularly recommended by HP and YTU, the other three being siddha, simha and bhadra. This āsana, generally known as baddhapadmāsana, consists in placing the right heel at the root of the left thigh (above it) and the left heel at the root of the right thigh (above it), crossing the arms behind, the chin firmly on chest fixing the gaze at the tip of the nose.

padmāsana-2 पद्मासन-२ (HP I 4, 44-49; II 59-60; BY IX 188), one of the most important āsanas which consists in placing the feet with effort on the opposite thighs and the palms one upon the other in the middle of the legs, fixing the gaze on the tip of the nose, touching the hard palate with the tip of the tongue and the chest with the chin, and raising prāṇa upwards (to the head). The arms are not crossed behind the back in this āsana.

padmāsana-3 पदासन-३ (TSM 39; YKU I 5; SAU I (3) 3), the simple āsana in which the two feet are placed on the two (opposite) thighs, without doing anything more.

padmāsana-4 पद्मासन-४ (VS I 71; VBh II 46), one of the ten important āsanas recognised by *Vasiṣṭha*. But unlike HP, he gives only one technique of

padmāsana which is popularly known as baddha-padmāsana¹. VBh quotes four āsanas from VS and padmāsana is one of them.

payasvinī-1 पयस्विनी-१ (DU IV 8, 20, 38), one of the seventyfour principal nādīs². It goes from nāḍīkanda to the left ear. Its presiding deity is prajāpati.

payasvinī-2 पयस्विनी-२ (VS II 22, 33, 37), one of the fourteen important nāḍīs enumerated by *Vasiṣṭha*. It is situated between pūṣā and sarasvatī and its range goes (on the right side) up to the right ear.

para पर (KU 16), brahma, the Supreme Reality. Suṣumnā (the spinal cord) clings to this. This adhesion is to be severed by manodhāraṇā.

paracittajñāna परचित्तज्ञान (YS, VB, VM, VBh III 19), intuitive knowledge of mind as such. As regards the content of samyama, there are two different opinions. According to VM, samyama should be practised on another's mind and on the other hand VBh and \overline{A} ranya believe that it should be practised on one's own mind. However, it seems that samyama is directed either on the content of other's mind or one's own mind, brings about the knowledge of very nature of the mind substance irrespective of one's own or other's it gives rather a universal knowledge of citta.

parajātisamvedana परजातिसंवेदन (VB, VM, VBh III 18), knowledge of the previous births of others or knowledge of one's own future births. *Vācaspati* considers it to be the knowledge of the previous births of others whereas VBh explains it as knowledge of the future births of oneself.

paratattva परतस्व (YSU II 18), highest truth. Through the regular practice of śravaṇa, manana and nididhyāsana on ātmamantra i.e. praṇava one realizes the paratattva.

paratantra परतन्त्र (SK 10), existing in the service of others. They very existence of **vyakta** (manifest world) is for the sake of **puruṣas¹**.

paradevatā परदेवता (GS III 40), synonym for kuṇḍalinī.

parapiṇḍa परिपण्ड (SSP I 13), Lord **śiva.** parabrahma परब्रह्म (ABU 16, 17), highest reality. The *śabdākṣara* has been construed as transcendental or highest brahman.

param परम् (YSU V 28, 29; HP IV 37), transcendent, one of the three forms of **brahman.** Other two forms are gross and subtle. The transcendent form is said to be of the character of the moon.

paramapada परमपद (SSP I 17, V 2), supreme abode. One of the five causal elements of 'anādyapiṇḍa'. It has five characteristics-purity, subtlety, immovability, infinity and untranscendability.

paramamukti परममुक्ति (NGB II 2), absolute liberation. Indian tradition talks of two types of liberationjīvanmukti and paramamukti. The difference between the two is that the later is the succeeding stage of **jīvanmukti** wherein there is no chance of rebirth at all and in which one becomes completely free from the physical body.

paramarṣi परमर्षि (SK 69), *Kapila*. He is the sage who is supposed to be the originator of **Sāṅkhya** philosophy.

paramahaṃsa परमहंस (HU 7), all pervading brahman containing in himself the sun and the moon, the oṃkāra, the Lord śiva, the gaṅgā गंगा, kāla and agni. All these can be imagined as the various parts of a swan (haṃsa) as under:-

Sun and moon -wings
Omkāra -head
Rudra (Śiva) -face

Pārvatī and

the Ganga -two legs.

paramākāśa परमाकाश (MBU IV 2, 3; ATU 7), one of the five members of vyomapañcaka, the bāhyābhyantarlakṣya of śāmbhavīmudrā (cf. ākāśa). According to ATU, the other four ākāśas are guṇarahitākāśa, mahākāśa, tattvākāśa and sūryākāśa. It is here described as the pitch dark sky gleaming like a twinkling star.

paramāṇu-1 परमाणु-१ (YS I 40), infinitely minute. It is open to **citta**¹ to concentrate on an object having any size from infinitely minute to extremely large.

paramāṇu-2 परमाणु-२ (VB III 42, 44, 52, 53; IV 14), an indivisible portion of dravya which is an organic whole made up of paramāṇus. If a dravya

is divided into its parts, it ceases to be that **dravya**.

paramātmā-1 परमात्मा-१ (BY IX 136), puruṣa³. Whatever soft and tasteful food is produced by nature, it is for the enjoyment of puruṣa³ as viśva, the experiencer of the waking state. The Monistic vedānta theory is that brahman is immanent in all living beings and is the introspector of the various avasthās under different names. As an introspector He is said to be the enjoyer.

paramātmā-2 परमात्मा-२ (SSP I 20), supreme soul. One of the causal element of anādyapinda. It has five characteristics-eternal, impiercible, incapable of being cut, incombustible and indestructible.

paramādevī परमादेवी (= citśakti) (YSU VI 47), one of the five śaktis which is here said to reside somewhere in the middle of the head below the brahmarandhra.

paramānanda परमानन्द (SSP I 23), absolute bliss, said to have five characteristics. They are spanda, harṣa, utsāha, niḥspanda and nityasukhatva.

paramārtha परमार्थ (BY XII 5), absolute (final) knowledge. Sāṅkhya system of philosophy is supposed to provide absolute knowledge.

paramālaya परमालय (BY IX 17), highest abode. **Oṃkāra** has been considered to be the highest abode and thus very important object for contemplation.

parameśvara परमेश्वर (BY IX 31, 152),

purusa³, who is all pervading and remains hidden in everything. But He does nothing for the ultimate good of the person who is not devoted to Him and does nothing to adore Him just as ghee is hidden in the cow's milk but is of on avail to us without our doing something to obtain it.

parameśvari परमेश्वरी (HP III 102), kuṇḍalini.

paramodharma परमोधर्म (BY XI 34), supreme code. A sacrifice, prescribed conduct, self-restraint, non-injury, offering a gift and the study of the scriptures are the supreme codes.

pararandhra पररन्ध्र (VU V 30), one of the four nāḍīs², all of which are here said to run inside the spinal column, the other three being suṣumnā, jvalantī and nādarūpiṇī. These four nāḍīs² are called nādādhāras.

paravairāgya परवेराग्य (VM, VBh I 16), superior detachment, in comparison to aparavairāgya. Non-attachment from all the qualities, guṇas, due to the knowledge that the puruṣa is different from the guṇas.

paraśar i r āveśa परशारीरावेश (YS, VB, VM III 38), capability of entering into another's body. This is attained through the saṃyama on the cause of bondage and also after achieving the knowledge of working of the mind.

parā-1 परा-१ (YKU III 18), unmanifested speech. A strange psychology of speech is propounded here. Speech is said to sprout in the mūlādhāra, where it

remains unmanifested; it comes out two-fold in the anāhatacakra in the chest; it appears in the form of a bud at the viśuddhacakra and blossoms forth in the vocal organs. The first of these stages of development of vāk is parā¹.

parā-2 परा-२ (YSU VI 5), one of the hundred and one $n\bar{a}d\bar{i}s^2$. It is the $n\bar{a}d\bar{i}^2$ which supports the suṣumnā according to this text. It is here said to be the central $n\bar{a}d\bar{i}^2$.

parākāśa पराकाश (MBU I 2, 13; IV 2, 3), transcendent ākāśa. One of the five states during intermediate introspection. By constant practice when one becomes the transcendent ākāśas, he resembles the profound darkness throbbing with the aspect of star. Other four ākāśa states are-primordial ākāśa, expanse of ākāśa, ākāśa of truth, ākāśa of sun.

parārtha-1 परार्थ-१ (YS III 35), mistaking oneself for another. The dṛśya is of the nature of bhoga (enjoyment) only so long as the citta (transmigrating soul) mistakes himself to be the supreme person and master. If he performs saṃyama on the opposite of parārtha, i.e. on svārtha (one's own reality), he comes to know that he is not the supreme soul, but only the sva (one's own) of a svāmin स्वामिन् (master) i.e. a puruṣa.

parārtha-2 परार्थ-२ (YS IV 24), dependent on another. The **citta** is dependent even for its existence as a **citta**, on the **puruṣa** to which it is related by **saṃyoga**. Citta is jaḍa and what it does, it does by virtue of its saṃyoga with puruṣa. parārtha-3 परार्थ-३ (VB II 20, IV 24; SK 56), serving the purpose of another. According to these authors, the citta¹ is literally the servant of his master, the puruṣa, and exists only to achieve the master's end-His enjoyment and liberation. But Patañjali does not seem to have meant this by the expression samhatyakāritva.

parāvidyā पराविद्या (PBU (U) 32), superior knowledge, highest truth. This superior knowledge can be attained by means of truthfulness, austere penance and also by adopting right ways of conduct i.e. brahmacarya and by following what is laid down in the upaniṣads.

parāśakti-1 पराशक्ति-१ (YSU VI 48; YCU 71), one of the five **śaktis** (powers). It is said to reside in the middle of the forehead. The seat of nada is said to be the **ājñācakra** in YSU and, probably for this reason, this sakti is described as nādarūpa. According to YCU, this **śakti** (energy) emanates from the Absolute Reality as light emanates from a flame, i.e. if brahman is a flame, parāśakti is its light. In other words, it is not something literally born out of brahman, but it is of brahman and in brahman. If the flame goes out there will be no light and without the light there would be no flame. Each is essential for the other. This sakti is therefore called svayamjyotirātmikā स्वयंज्योतिरात्मिका (self luminous). From this light the five **mahābhūtas** (elements) are created in order.

parāśakti-2 पराशक्ति-२ (SSP I 6), supreme energy. This energy is an outcome of nijāśakti. Parāśakti further gives birth to the aparāśakti. This triad of energy is responsible for any worldly activity. paricava परिचय (YTU 20; HP IV 74; VU V 71), one of the four stages of progress in yoga4. Paricaya in this context is paricaya of vāyu, paricita vāyu4 is said to enter the susumnā (spinal cord). Paricaya would, therefore, be that stages of progress in yoga4 at which vāyu is tempered with agni and reaches the head. Vayu4 thus enriched is in all probability the kundalini. According to VU, in this state the body is neither alive nor dead and again $yog\bar{i}'s$ $v\bar{a}yu^4$ does not fall from the sahasrāra.

paricitavāyu परिचितवायु (HP IV 19) vāyu which has been controlled by continuous practice of āsanas, kumbhakas and mudrās is called paricitavāyu. This helps in arousal of kuṇḍalinī and leading it towards suṣumnā for achieving manonmanī state.

parināma-1 परिणाम-१ (YS III 9, 11, 12, 15, 16; IV 14, 32, 33; SK 16), apparently stationary individual reality appearing on the surface of unceasing change and existing as the same individual in spite of it; e.g. a whirlpool which looks like a stationery figure in spite of the water being incessantly in motion; or

an ālātacakra आलातचक्र. As water assumes the forms of current, bubble, whirlpool, wave, etc., so gunas assume an infinity of forms. The transmigrating individual souls, the living bodies and the lifeless objects are the various special forms of the three gunas (gunaparināmaviśesa). The transmigrating souls are aindriya, made up of the indriyas (karanas). The material objects are bhautika. They are made up of the mahābhūtas. Pariņāmas are these stationary figures which stand out on a moving ground. Their changing laksanas and avasthās also are similar parināmas. Parināmatah परिणामतः therefore, means: by assuming different forms. Prakṛti operates by assuming innumerable everchanging forms and shapes as a result of the combination of the three gunas in different proportions.

pariṇāma-2 परिणाम-२ (YS IV 2), change jātyantarapariṇāma जात्यन्तरपरिणाम is taking another mode of being after death.

pariṇāmakrama परिणामक्रम (VB, VM II 19), order of change or transformation or successive transformation, with reference to successive tanmātrās, the earlier tanmātrās being the causes. The subtle elements are the causes for the further mutation in the five gross elements.

pariṇāmatraya परिणामत्रय (VB, VM III 16), mutation. There are three mutations-characteristics (dharma), qualities (*lakṣaṇa*) and states (**avasthā**). The practice of **saṃyama** on these three leads to the knowledge of past and future.

parināmaduhkha परिणामदःख (YS, VB, VBh II 15), pain which necessarily follows every pleasure enjoyed by satisfying a desire. According to VB, satisfaction of a desire does not bring lasting pleasure; because as one desire is satisfied another arises and there is no end to this hankering for more and more, which keeps a man always in need and therefore unhappy. This is how VB explains parināmaduhkha. According to VBh, everything is painful even for one who is not a *yogi*. After experiencing pleasure there arises attachment and one starts wishing that this pleasure be permanent which is not possible, hence it ultimately becomes the cause for suffering.

paritāpa परिताप (YS II 14), pain. According to the theory of karmaphala, every vicious action is punished by an experience of pain at some time or the other in future.

paridṛṣṭa परिवृष्ट (VB, VBh III 15), perceivable through senses. One of the two abilities of mind (citta). The other ability of mind is aparidṛṣṭa. A cognition which is achieved through special mutation in the form of modification is called paridṛṣṭa.

paridhānayukti परिधानयुक्ति (HP III 108), skill and care as is required for putting a sword in the sheath. parinirmitavaśavarti परिनिर्मितवशर्वात (VB III 26), a class of gods residing in the māhendraloka.

paripakva-1 परिपक्व-१ (TBU I 45), developed-advanced. Reference here is to those $yog\bar{i}s$ who have mastered dhyāna-here called brahmavṛtti- and who can get into that unmistakable vṛtti at will. These $yog\bar{i}s$ advanced in $yoga^4$.

paripakva-2 परिपक्व-२ = pakva पक्व (YSU I 25, 26; BU II (4) 4), one of the two kinds of men, the other being apakva. In YSU this pakva (ripened) is said to be brought about by the fire of yoga⁴ and the pakvas are said to be ajada and śokavarjita शोकवर्जित (happy). The two meanings of the word paripakva do not differ much.

paripurnacandramandala परिपूर्णचन्द्र-मण्डल (MBU II (1) 10), full moon-one of the- divyarūpas दिव्यरूप (divine lights), which the yogis see as signs indicating the approach of success in śāmbhavīmudrā. It is a tārakalaksya-the vision of a bright full moon. parimāna परिमाण (SK 15), limits. All the various forms of vyakta (the manifest nature)-right from mahat to the gunaparināmaviśesas have their limits, i.e. are not unlimited. These constitute the vaiśvarūpya which includes all the lingas-the prakrta entities with which purusas² have beginningless samyoga. The number of such purusas² and their requirements is infinite. Hence there must be an infinite cause of the vaiśvarūpya. That cause is the avyakta². This is one of the arguments advanced by SK to prove the reality of avyakta², as infinite material cause of the infinity of forms.

parokṣa परोक्ष (SK 6), that which cannot be perceived by the senses. Most of that which is atīndriya (beyond the range of the sense) can be known by anumāna (inference) and which cannot be known by anumāna also is known by āptāgama (reliable testimony).

paryanka पर्यंक (VB II 46), one of the few examples of āsana given by VB. It is not explained here. It may be the same as garuḍāsana.

paryāya पर्याच (VM III 54), respective feature or subordinate particulars, characteristic of time (kāla). Time as the object not only includes past, present and future but also their respective features or subordinate particulars i.e. their subdivisions.

pavana-1 पवन-१ (GS III 7; HP II 66, III 74, IV 23, 51), internally aroused sensations which are experienced as a result of practising yoga⁴. The yogīs generally experience a creeping sensation along the spine which travels upwards. When it is felt on top of the head the journey of pavana is said to have come to an end. Then another series of such sensations is reported to start from the same point in the spine, similarly rising to the head. Yogīs are advised to practise holding the sensation there.

Maintenance of the centrally aroused cutaneous sensation in the head is the **nabhomudrā** of *Gheraṇḍa*. The **nabhomudrā** of *Gorakṣa*, however, seems to be the same as *Gheraṇḍa's khecarī*. In this **mudrā** also **pavana** is held in the head.

pavana-2 पवन-२ (HP I 45, 55 II 39, 48, 49, 51, 57, 62, 64), breath. For performing different types of prāṇāyāma we have to inhale and exhale in different ways. Pavana is one of the words used for breath so manipulated. For adopting padmāsana, among other things, breath is drawn slowly before fixing the gaze on the tip of the nose.

pavana-3 पवन-३ (HP II 17), the humour generally called vāyu or vāta in Āyurvedic terminology.

pavana-4 पवन-४ (HP II 26), motor impulse. The nervous impulse which propels the contents of the alimentary canal is here referred to as apānapavana, which raises the liquid in the stomach to the throat for doing gajakaraṇī.

pavana-5 पवन-५ (BY IX 47), that which purifies is known as pavana. Synonym of the element savitr. It is known by different names depending on its action. Due to the act of purification it is called pavana.

pavanakriyā पवनिक्रया (HP I 55), practice related with **prāṇa**. These practices include different varieties of **prāṇāyāma, mudrā** etc.

pavanaprakopa पवनप्रकोप (HP II 17), disorders of vāta humour. The faulty practice of **prāṇāyāma** leads to the disorders of **vāta** humour causing different diseases like hiccup, asthma, cough, pain in the head, ear and the eyes.

paścimatāna पश्चिमतान (HP I 28, II 46; YSU I 112; GS II, 4, 26), the āsana in which the practicant stretches his legs in the sitting posture, bends forward, catches hold of his big toes with the forefingers of his two hands and if possible, rests his face on his knees-not by bending them but by bending his arms at the elbow. This posture need not be maintained for more than three minutes a duration which is to be attained gradually by practice.

paścimavāhī पश्चिमवाही (HPI29), (directing the) passage of prāṇa along the back. The passage of prāṇa referred to here is the series of sensation felt in the back which one experiences as something rising up in the back.

paścimābhimukhaprakāśa पश्चिमाभिमुख
-प्रकाश (MBU II (2) 1), appearance of
the light which the yogī sees after the
signs of śāmbhavīmudrā, called
tārakalakṣyas. If a yogī sees the
tārakalakṣya with his eyes open
(purṇimā dṛṣṭi) and then closes his
eyes, the vision which he sees with the
eyes closed is a paścimābhimukhaprakāśa. Similarly, if he sees the tārakalakṣya with eyes closed (amādṛṣṭi)
and then opens his eyes and sees some
other vision, then that would also be the
paścimābhimukhaprakāśa. This

sensation is thus an after image of an internally aroused visual sensation, which itself is not an after image of any sensation.

paśyantī पश्यन्ती (YKU III 18; YSU III 3), a stage of manifestation of vāk (speech). At this stage the energy of speech (vāk) is said to sprout into two blades (cf. parā¹). According to YSU, it is one of the śaktis of the goddess of speech. Yogīs are here said to see the whole universe by dint of the knowledge of this śakti. Those who meditate on it hear an internally aroused sound of rain.

pākayajña पाकयज्ञ (BY VII 129), domestic sacrifice. However, BY considers pākayajña inferior in comparison to the japayajña.

pāñcarātrika पाञ्चरात्रिक (SSP VI 57), one who knows the indestructibility transformation of and non-recreation from the pañca-mahābhūtas is called a pāñcarātrika. Here rātri indicates the state of non-re-creation from the elements of bhūtas.

pāṇi पाणि (SK 26; TSB 5, 9), literally hand. But it is the technical name of one of the five action organs (karmendriyas). A karmendriya is nothing like a muscle or a gland, which we know as the two organs of action (=behaviour). An indriya¹ is itself atīndriya (= imperceptible). It can be described as a faculty. It is energy which transmigrates with the transmigrating soul. Without the indriyas no

consciousness or behaviour would be possible.

Pāṇi is the karmendriya responsible for all kinds of activity, with respect to external objects, which do not imply a change of place of the whole body. The external limbs of the body are also external objects for this purpose. The function of pāṇi is not only manual work. Ability to work with feet or head or another limb is also ādāna (function of the pāṇindriya). Kicking, pushing, heading etc. come under ādāna, though typical ādāna is manipulation. The term pāṇi stands for the energy of a special form which is responsible for ādāna.

According to TSB, $p\bar{a}n\bar{i}$ is one of the five $am\acute{s}as$ of $prthv\bar{i}$ (the earth element). $Manas^2$ which is somehow associated with $v\bar{a}yu^4$, is here said to be $p\bar{a}ny\bar{a}dhisthita$.

pāṇḍarabindu पाण्डरिबन्दु (YCU 60-4), suklabindu-the secretion supposed to be white. Combined with the lohita लोहित bindu², which secretion is supposed to be red, it is said to rise up along the yogī's back. Vāyu¹ is said to drive these bindus¹ upwards. But neither the bindus¹ nor the vāyu¹ is perceived. What actually is felt by the yogīs are the cutaneous sensations inside, up along the back, and it appears to them that something is rising to their head. This something is also sometimes called bindu².

pātra पात्र (BY XI 22), eligible (adhikāri).

One in whom both jñāna and tapa (knowledge and mortification) are fused together.

pāda पाद (SK 26; TSB 5, 9), literally foot.

Technically it is one of the five karmendriyas (action-organs) in indriya¹ responsible for viharaṇa (= going from one place to another). It is not the limb which we call foot alone, as people deprived of feet and legs also can move about. If nothing else, they can roll. This is also viharaṇa. It appears that bird's flight is also viharaṇa. cf. pāṇi. According to TSB, it is one of the five aṃśas (forms) of pṛthvī (earth). Buddhi¹, which is associated with agni is here said to be pādādhiṣṭhita.

pādāṅguṣṭha पादांगुड (VS III 62, 65), the big toes. One of the eighteen marmasthānas (vital points) used for the practise of pratyāhāra. Pādāṅguṣṭha is the starting point of marmasthānas and one has to start practising pratyāhāra beginning from pādāṅguṣṭha.

pāyu-1 पायु-१ (SK 26), the karmendriya which is the ability and the tendency to expel stool and urine when necessary, the function called utsarga.

pāyu-2 पायु-२ (GS I 45), the anus. For jalavasti one has to draw up water through the rectum as high as the level of the navel.

pāyumūla पायुमूल (VS III 63, 68), bottom of the anus. Seventh vital point in the series of eighteen vital points and its distance from big toes is fortytwo

fingers and nine fingers from the middle of the thigh.

pāraga पारग (BY XI 11), one who has gone beyond the **tattvas** and knows the reality beyond it.

pārthiva-1 पार्थिव-१ (ANU 30), pertaining to pṛthvī which is one of the five tattvas³ (mahābhūtas). The pārthiva tattva³ is made up of the gandhatanmātrā which is supposed to have the characteristics of all the five tanmātrās (VB II 19). In this Upaniṣad the pārthivatattva is said to be pañcamātrā.

pārthiva-2 पार्धिव-२ (YSU V 31), one of the five agnis (fires) in the body. This fire is said to reside where the bile duct opens into the duodenum.

pārthivadharma पार्धिवधर्म (VM III 44), properties of the earth element in its gross (sthūla) form. There are eleven properties of earth element which are shape, weight, roughness, resistance, stability, sustenance, divisibility, endurance, meagreness, hardness and usefulness.

pāvamānī पावमानी (BY VII 22), a name of the Vedic *sūkta* recited for the purpose of purification of the body after taking bath.

pāśāṣṭaka पाशास्टक (SSP V 65), eight bindings. Hatred, shyness, fear, doubt, abhorrence, dynasty, conduct of the family, race-these are recognised as the eight bindings that are attached to jīva and are removable through the blessings of the guru only.

pāśinī पाशिनी (GS III 3, 65), one of the twentyfive mudrās enumerated by Gheraṇḍa. It consists in forming a kind of tight noose with the feet thrown round the neck. In addition to strengthening and developing the body. It helps on arousing the kuṇḍalinī śakti.

pāśupata पाश्चपत (SSP VI 42), Lord of the creatures. **Pāśupata** removes the bondage of **karma** and protects all the creatures.

piṅgalā-1 चिंगला-१ (KU 16; G 18, 20, 23; TSM 70-1; HP III 73, 106; DBU 52, 55; YSU V 18, VI 6; SAU I (6) 5 (7) 1), one of the three most important nāḍīs². It is situated on the right side. This nāḍī² runs from the navel region to the head. Prāṇa may rise along this nāḍī or along iḍā or suṣumnā. This nāḍī is said to run on the right side of the suṣumnā and sūrya is said to be its presiding deity.

piṅgalā-2 पिंगला-२ (TSM 96-7; GS V 52; HP II 10), the right nostril, presumably served by some nerve fibres which form part of piṅgalā. cf. sūrya.

piṅgalā-3 पिंगला-३ (VS II 27, 28, 31, 36, 39, 65, 66), a nāḍī which exists on the right side of suṣumnā situated in the kanda. It runs up to the end of right nostril. Sun is said to move in piṅgalā nāḍī. This is identified with right nostril.

piṇḍavicāra पिण्डविचार (SSP I 3), discussion on the body. In SSP the theory of nātha has been explained in six chapters. Piṇḍavicāra forms second

chapter. It discusses nine cakras, sixteen ādhāras, three lakṣyas, and five ākāśas. Other chapters are piṇḍotpatti (origin of the body), piṇḍasaṃvitti (knowledge of body), piṇḍadhāra (the foundation of the body), piṇḍapādayoḥ samarasakaraṇam (the union of the body with supreme reality) and avadhūtayogī lakṣaṇam (the characteristics of an avadhūtayogī).

piṇḍasaṃvitti पिण्डसंवित्ति (SSP I 3, III 1), knowledge of the body. Nāthayogīs are of the view that all the seven lokas, seven pātālas, seven oceans all the rivers exist within the human body. A yogī who knows the existence of all the conscious (cetana) and unconscious (jaḍa) worlds within his body is understood to have piṇḍasaṃvitti.

piṇḍasiddhi पिण्डसिद्धि (SSP V 12, 13), perfection of the body. When a yogī realises the non-dual state of the self and the paramapada (supreme state), then he attains the perfection of the body.

piṇḍāṇḍa पिण्डाण्ड (ATU 9), the individual body, as opposed to brahmāṇḍa the macrocosm. The tāraka yogī is advised to imagine that there are a sun and a moon in the middle of his head, as there are the sun and the moon out in the sky and to try to see them by anusandhāna.

piṇḍādhāra पिण्डाधार (SSP I 3, IV 1), foundation of the body. There is a power which is supposed to support all the universe. This power itself is both a

cause and effect of the whole world and is called as indescribable, of the form of wisdom, ever-awakened. This power is known as piṇḍādhāra. Another name of this power is nijāśakti.

piṇḍikaraṇa पिण्डीकरण (TSB 7), the viṣaya4 of a jaivatanmātrā obviously that of rasa. It appears to be the name given by TSB to the active principle in the rasatanmātrā which stimulates the jaivatanmātrā in the tongue (jihvā). Viṣaya in this context means the way in which an organ is put in commission. pindotpatti (garbholi) पिण्डोत्पत्ति (गर्भोल)

(SSP I 69), origin of the body. When a male and female intercourse at the time favourable for conception (*ṛtukāla*), then the **jīva** with the association of **raja** and **vīrya** (semen) comes into the uterus. After staying ten months in the uterus, it takes the bodily form and comes out. This body consists of three humours (**vāta**, **pitta**, **kapha**) and seven **dhātus** such as skin, blood, flesh, etc. It is called **garbholi piṇḍotpatti.**

pitta पित्त (HP II 28, 58, 65, V 12; VB III 29), one of the three fundamental causes of diseases according to the \overline{A} yurvedic system of medicine. It is generally equated with the Greek humour called yellow bile though the \overline{A} yurvedic vata, pitta and kapha are very different from them.

pittakoṣṭha पित्तकोछ (HP V 3, 7), region of bile (pitta). From the navel to chest is considered to be the region of bile. When vāyu goes astray and accumu-

lates in the region of **pitta**, it results in pain in the chest, on both sides and in the back.

pīṭha-1 पीठ-१ (GS II 23, 33, 39, 41; HP I 39, 40, 67), āsana¹

pitha-2 पीठ-२ (GS VI 12), a seat. For sthūladhyāna the yogi is advised to imagine his guru² on a seat decorated with the mark, called nādabindu.

pitha-3 पीठ-३ (YSU I 171-5), a dhyānasthāna which is also the seat of God on which dhyāna is recommended.

pīyūṣa पीयूष (GS III 28, 60; HP III 71), nectar. As a result of the practice of khecarīmudrā, the person experiences the pleasurable sensations of various juices. After having the taste of salt, bitter, astringent, butter, milk, ghee, honey etc. he lastly experiences the taste of nectar. Nectar is said to be coming from somamaṇḍala. It is proptected from falling into the fire (navel region), by the practice of jālandharabandha. Nectar exists in the water element also.

puṇya-1 पुण्य-१ (YS II 14; VB II 12, 30, 34, IV 6), an ethically good action. It is supposed to bring happiness sooner or later. That puṇya somehow brings happiness is believed to be a supernatural law. But Patañjali's sūtra can also be interpreted as meaning that the person who leads an ethically good life is happy because he does not feel the pricks of conscience which make a man unhappy. It would however be a farfetched interpretation.

puṇya-2 पुण्य-२ (YSI33), virtuous person. The yogi is advised to be happy with the persons who perform virtuous deeds and live an ethically good life.

punya-3 पुण्य-३ (VB II 5), pure. One of the implications of the kleśa, avidyā is that when persons afflicted by this kleśa, as all of us are, take impure things to be pure, e.g. the human body. purusa-1 पुरुष-१ (SK 3, 11, 17, 19, 21, 37, 55-61; YS I 16, 24, III 35, 49, 55, IV 18), jña, which is not prakṛti in any sense. In other words, it is not guṇātmaka गुणात्मक (made of guṇas). There are many purusas¹-each simple in structure and discrete. Purusas1 are certainly real but their reality is not objective and they are, therefore, considered to be pure subjects. Gunas¹ alone are said to have objective reality. The purusas¹ enjoy a reality of its own kind. It is cetana itself (cf. acetana). No purusa¹ is the material cause of any effect. Hence purușas1 are called aprasavadharmīs अप्रसंवधर्मी. From these facts, which *Īśvarakṛṣṇa* has himself stated about purusa, he infers the sākṣitva, kaivalya, mādhyasthya, drastrtva and akartrbhava of purusa, though all this does not necessarily follow from what he has said. According to *Īśvarakṛṣṇa*, so long as there is a linga1 in samyoga with a purușa1 it is natural that the latter be subjected to the miseries of old age and agony of death. But puruşa1, who is cetana itself, is in no way affected by

this experience or by the kleśas. The person who is affected is purusa2-a combination of purusa and linga, and as such he is devoid of cetana. Īśvarakṛṣṇa often fails to distinguish between the whole and the part, and speaks as if puruşa had avidyā etc. According to Patañjali, on the other hand, purusa is never subjected to any kind of pain and we cannot distinguish between a purușa¹ and a purușa² in this respect. It is only citta who suffers and undergoes a change with every experience. Thus no experience can be attributed to purusa1 except introspection of the citta with which he may be in samyoga and the vrttis of that citta², if such an introspection can be called experience (cf. puruşa²).

purusa-2 पुरुष-२ (SK 18, 36, 37, 65), a combination of purușa1 and linga1. Īśvarkṛṣṇa has given three arguments to prove plurality of purusas, two of which prove the plurality of purusas2not of puruṣas¹. Īsvarakṛṣṇa uses the word puruşa indiscriminately. The purusa who is cetana, drastr etc. is purusa¹, while the purusa who transmigrates and behaves like a soul devoid of cetanā is puruṣa². On attaining kevalajñāna a part of purusa2 survives as puruşa, while the other part disappears. This loose thinking is natural. The combination is unique and difficult to grasp. But this is the Sānkhya theory. Patañjali makes no difference between purusa1 and **puruṣa².** For *Patañjali* **puruṣa¹** does not transmigrate nor does he feel the pain of disease or death.

puruṣa-3 पुरुष-३ (MBU I (4) 1, II (1) 1, III (1) 1-2, IV 1), brahman in man seen as enjoying the avasthās called jāgrat, svapna, suṣupti and tūrya. cf. viśva, taijas and prājña.

puruṣa-4 पुरुष-४ (BY IX, 135, 177, 184-6), brahman the reality which is all pervading and hence seen by *yogīs* in different places. It is not perceived as a concrete object, but realised as the ultimate Reality behind the object sensed, perceived or imagined.

puruṣa-5 पुरुष-५ (BY IX 85), the supreme being is called puruṣa because he is visible everywhere, has thousand hands and feet and pervades all over.

puruṣakhyāti पुरुषख्याति (YS I 16; VB II 24), vivekakhyāti.

puruṣajñāna पुरुषज्ञान = puruṣadarśana पुरुषदर्शन (YS III 35; VB I 16), the recognition on the part of citta¹ (the transmigrating soul) that he is not supreme and that there is another without whom he is nothing. Puruṣajñāna is the knowledge of that other.

puruṣārtha-1 पुरुषार्थ-१ (YS IV 34), the need of being a citta¹ for a puruṣa¹. A citta¹ completely severing its connection with its puruṣa¹ and its disintegration are two aspects of one and the same phenomenon. Then the puruṣa¹ left untouched by prakṛti¹. When a krama is disintegrated it loses its individuality and reverts to the original

undifferentiated level of **prakṛti.** This is the end (śūnyatā शून्यता) of **puruṣā-rtha.**

puruṣārtha-2 पुरुषार्थ-२ (VB II 18-9; SK 31, 42, 69), bhoga and apavarga. Dṛṣya (guṇātmaka reality) exists, according to these writers, for the sake of the bhoga and apavarga of the puruṣas¹. Puruṣa in this context should be a liṅga¹ or citta¹ in saṃyoga with a puruṣa¹ and puruṣārtha the bhoga and apavarga of puruṣa², not that of the puruṣa¹ with whom the liṅga¹ has a saṃyoga. Nevertheless this is their idea.

puruṣārtha-3 पुरुषार्थ-३ (VM II 21), for the purpose of puruṣa. It is the dṛśya (seen), i.e., prakṛti which serves the essential purpose of seer (puruṣa). The very purpose of the seen (dṛśya) is to provide experience and means of emancipation for the puruṣa. Therefore, the very existence of prakṛti is understood to be puruṣārtha.

pūjyapāda पूज्यपाद (HP I 7), name of a siddha yogī. Svātmārāma has enumerated these names as a mark of salutation to those yogīs.

pūraka-1 पूरक - १ = pūra पूर (BY VIII 9, 19, 20; G 47; GS I 56, II 45, V 9, 53-4, 76; DU VI 12; YTU 50; SAU I (7) 7, 11, 13; HP II 36, 45, 68-9, 71-3, III 25, V 10, 19), one of the three components of prāṇāyāma. It is the act of inhaling (= filling the lungs with air).

BY explains $p\bar{u}raka^1$ as filling all the $n\bar{a}d\bar{i}s$ by inhalation. They speak as if

the same **prāṇa** which we inhale enters the whole body. In fact when we inhale we simultaneously experience certain tactual sensations in different parts of the body and as the two phenomena are intimately related they refer to both in the same terms. Afterall inhalation and raising these sensations is the work of the same *elan vital*.

pūraka-2 पूरक -२ (TBU I 32), the belief
"I am **Brahman**." This *Upaniṣad*decries straining of the respiratory
organs by controlled respiration and
considers **viveka** to be only object
yogīs should try to achieve.

pūraka-3 पूरक -३ (BY VIII 22-23, 43), the state of mind at the time of inhaling, as opposed to the act of inhaling. In this state, according to this text, the perfect yogī becomes one with brahman.

pūraka-4 पूरक-४ (VM, VBh II 49), breathing in the external air and holding it in koṣṭha (heart or lungs).

pūrita पूरित (HP I 48), in its fulness. If at the time of death the apānavāyu rises to the head again and again in its fulness, i.e. carrying along with it agni¹, citta¹ and all, the dying person gets Supreme Realisation. Such apānavāyu appears to be a description of kuṇḍalinī¹. The śakti which is here said to be responsible for this realisation is obviously the kuṇḍalinī śakti.

pūrṇagiri पूर्णगिरि (YSUI 173, V 10), one of the four pīṭhas on the body. The cakra (literally wheel) with twelve spokes-anāhata-is said to be situated

in the chest and is called the pūrṇagiripīṭha. Probably these piṭhas are the
sthānas from where prāṇa¹ can rise
and where it can rest. Prāṇa¹ rising
from the kāmarūpapīṭha (between
the sex organs and the anus) can rest at
pūrṇagiri (in the chest), the jālandhara (in the throat) on the uḍḍiyānapīṭha (in the head).

pūrṇatva पूर्णत्व (TBU I 42), perfection (realisation of brahman). By practising brahmavṛtti (= dhyāna of brahman) the yogī-realizes his true self (i.e. brahman) and this is perfection. Brahmavṛtti and pūrṇatva are equated when the yogī is advised to practise pūrṇatva.

pūrṇimā पूर्णिमा = paurṇamāsī पोर्णमासी
(MBU II (1) 6; YKU III 1, 2), one of
the three dṛṣṭis (gazes). When the
tārakalakṣya is seen with eyes wide
open, this dṛṣṭī is called pūrṇimā.
Practice of this is highly recommended.
This gaze is adopted at the time of
mantrajapa (reciting a sacred formula), obviously accompanied with
dhyāna. It is the best of the three gazes
and is highly praised by YKU.

pūrva-1 पूर्व-१ = pūrvatāraka पूर्वतारक = pūrvatārakayoga पूर्वतारकयोग (ATU 8, 11). It is samanaska समानस्क tārakayoga-anusandhāna alone, the uttaratārakayoga being amanaska tārakayoga-śāmbhavīmudrā. The light which the yogī sees in this yoga is not introspected as we understand by the word introspection. It is attention

fixed on an anusanddheya. Tārakayoga begins when an anusandheya is seen and attended to. The yogī knows it to be the light of the ultimate reality. But this knowledge of brahman is manaska मनस्क (mental). True realisation of brahman is amanaska. It consists in the yogī being merged in brahman during uttaratārakayoga. pūrva-2 पूर्व-२ (YS I 26), according to VB, they are brahmā, viṣṇu and śiva, who in their turn, draw inspiration from īśvara.

pūrvajanma पूर्वजन्म (VB II 9), previous birth. 'May I not cease to live', 'May I Live on and on'. This craving is not to be raised in one who has no previous experience of death. This statement of VB approves of the concept of pūrvajanma. The impressions of pūrvajanma is responsible for abhiniveśa in present life.

pūrvajātijñāna पूर्वजातिज्ञान (YS, VB III 18), the knowledge of previous birth. It becomes manifest through saṃyama on the latent impressions.

pūrvārdha पूर्वार्ध (ATU 8), pūrva = purvatārakayoga.

pūrvotpanna पूर्वोत्पन्न (SK 40), produced before. The bhāvairadhivāsitalinga भावैरिधवासितिलंग (the transmigrating self) is supposed to have been produced before it assumes a living body of the bhautikasarga, (i.e. a mātāpitṛjaviśeṣa). pūṣā-1 पूषा-१ (TSM 72; YSU V 22), one of the principal nāḍīs². It emanates from the hṛtsthāna हत्स्थान (region of

the chest) and goes to the left ear. It may be the never which serves the left ear. In some contexts the word $n\bar{a}d\bar{i}$ is used for the nerves of the autonomic system.

pusa-2 प्षा-२ (VS II 31, 36, 39; BY IX 93), one of the fourteen nādīs situated at the backside of **pingalā** (right nostril) and it goes upto the eyes (cf. kanda). prthvi-1 पृथ्वी-१ (VB II 18, III 44, IV 14; VM III 44; TSM 2; G 69), one of the five mahābhūtas (elements), the viśesa of the aviśesagunaparva the gandhatanmātrā, which has the characteristics of all the other tanmātrās. Hence prthvī has the characteristics of all the other mahābhūtas, besides its own, viz. solidity. The essential feature of the tanmātrā in prthvi seems to be its ability to stimulate the nose and bring about smelling which is the function of the jaivatanmātrā (see TSB 7) in the olfactory cells. Prthvi is the object of meditation in pārthivīdhāraņā (of G). It is said to be yellow and four cornered and vajra वज्र (thunder bolt) is said to be its emblem.

pṛthvi-2 पृथ्वी-२ (TSM 135, 142), part of the body from the knees to the feet. The whole body is divided into five parts which are given the same names as are given to the five mahābhūtas. The whole material creation evolves out of the mahābhūtas, according to TSM.

pṛthvī-3 पृथ्वी-३ (VB III 45, IV 14), any solid substance. By a successful

saṃyama on the material side of nature, the $yog\bar{i}$ acquires the ability to enter solid substances.

pṛthvi-4 पृथ्वी-४ (VB III 32, IV 14), the planet earth. By a successful saṃyama on the internally aroused visual sensation localised inside the head the yogi sees the beings moving about in the region between the earth and the sky.

pṛthvi-5 पृथ्वी-५ (HP III 122), āsana.
prthvijaya पृथ्वीजय (VS IV 10), control over the earth element. By practising dhāraṇā (concentration) on this element along with its letter 'la' ल and the deity 'brahmā' for two hours and by taking air (vāyu) to the pṛthvi sthāna in one's own body, i.e. mentally imagining vāyu to be in that region, one attains victory over the earth element.

pṛthvisthāna पृथ्वीस्थान (VS IV 6, 8-10), region of earth. From toes (feet) to knees is symbolically characterised as the region of earth.

poṣaṇa पोषण (TSM 86), nourishing of the body by providing food, etc. which is said to be the function of the samāna-vāyu. Poṣaṇa is obviously the same function as samīkaraṇa.

pauruṣeya पौरुषेय (BY XII 10), made, related, written or constructed by man. Bauddha, Lokāyatika and Kuhakas hold that Vedas are written by men and therefore, they are pauruṣeya.

prakāśa-1 মকায়- (YS III 21; VB I 27, IV 19), light. As a result of saṃyama on the seen form of his body no light is reflected by *yogī's* body. Hence nobody can see the *yogī*.

prakāśa-2 प्रकाश-२ (YS II 18, 52, III 43), knowledge, consciousness, which is the function of the sattvaguṇa. As a result of practising prāṇāyāma² cognitive ability increases, thinking becomes clear, there is not much forgetfulness and not many illusions. According to VB, the kleśa avidyā also becomes weak, as a result of which the yogī sees the light which otherwise remains concealed. The same result is obtained by what VB calls mahāvidehadhāraṇā.

prakāśa-3 সকাগ-३ (SSP I 26), illumination, manifestation. It has five qualities-(1) without any deviation; (2) without particulars; (3) nirvikalpatva-a kind of knowledge or samādhi which does not recognise the distinction between subject and object; (4) samatā-equanimity or poise; and (5) rest.

prakāśya प्रकाश्य (SK 32), one of the three functions of the karaṇas². Prakāśya being object of cognitive consciousness (that which is known-a viṣaya⁴) that towards which the manas¹ (mind) or the buddhīndriyas (senses) are directed, literally that which is illumined by them. Prakāśya is the act of consciousness.

prakṛti-1 प्रकृति-१ (VB III 48; SK 3, 11, 22, 37, 55, 61; BY IX 183), one of the two realities both of which are eternal and ultimate and exist in their own right-the other being puruṣa¹. Cittas, the vegetable kingdom, and all material things are prākṛtika. Only puruṣas¹ are not.

This is **mūlaprakṛti**, which is only a potentiality of all kinds of change-the changing reality-and is generally known as **pradhāna**. It corresponds to *Patañjali's* **aliṅga** stage of differentiation in **guṇas¹** and is the primeval matter of which **mahat** is the first form. It is not itself the form of any other matter.

According to BY, contemplation of everything in **prakṛti**¹ and of **prakṛti** in **puruṣa**² is also **dhyāna**.

prakṛti-2 प्रकृति-२ = mahat महत् (SK 56), guṇas¹ in action (cf. prakṛti¹ above). The change that mahat displays is of an infinity of patterns. This is its vibhutva বিশ্বলে. Behind prakṛti² is prakṛti¹ which also, being its cause and essence is potentially guṇātmaka गुणात्मक (of the nature of guṇas).

prakṛti-3 মকূনি-ৰ = pradhāna² মধান = liṅga¹ (SK 62, 65), the guṇātmaka part of puruṣa². Puruṣa¹ in saṃyoga with pradhāna² is puruṣa²- the transmigrating soul-and every liṅga is necessarily in saṃyoga with a puruṣa.

prakṛti-4 प्रकृति-४ (YS, VB IV 3), a process of nature. Transmigration is according to *Patañjali*, a natural process. Every death occurs when the sum total of conditions adequate for it to be brought about, is complete. This means that the exact time of death and rebirth is not determined by one's merits and demerits, but by natural conditions. Virtue and vice only determine a pleasant or painful future existence (cf. YS II 1). cf. prakṛtyāpūra.

prakṛti-5 प्रकृति-५ (YCU 72), the parāśakti. Sthūlaprakṛti is only parāśakti in the form of sthūlaśarīra (body).

prakṛti-6 प्रकृति-६ (BY II 81), nature of omkāra.

prakṛti-7 মকূনি-৩ (BY XI 10), matter, primary cause of the universe. He who knows the modifications of **prakṛti** is known as wise in *Vedas*.

prakṛti-8 মকুনি-৫ (SSP I 59), nature of individuals. It has five qualities (1) desire, (2) greediness, (3) covetousness, (4) expectation, and (5) falsehood.

prakṛtipiṇḍa ঘকুনিবিত্ত (SSP I 37), physical body composed of twenty-five elements of prakṛti. According to SSP I 38 to 42, each gross element has five qualities and combining five qualities of each element, they become twenty-five. The physical body irrespective of men and women, are composed of these twenty-five qualities.

prakṛtilaya प्रकृतिलय (YS I 19; SK 45), merged in prakṛti³ (nature). According to Patañjali, prakṛtilayatva is the state of asamprajñāta (yoga). It is said to be spontaneous in the case of beings known as prakṛtilayas, which only means that the prakṛtilayas exist in the state of prakṛtilayatva. By their very nature they are in the state of asamprajñāta (yoga).

prakṛtilina प्रकृतिलीन (VB I 24), prakṛtilaya.

prakṛtyaṣṭakarūpasthāna प्रकृत्यष्टकरूप-स्थान (YKU I 74), the dhyānasthāna at the top, i.e. the highest point, in the head (cf. ākāśa³). Why it is called by

the eightfold prakṛti² of the Supreme Being is said to consist of the five mahābhūtas/tanmātrās (elements) and the three antahkaranas (manas², buddhi2 and ahankara). But SK speaks of seven prakṛtivikṛtayaḥ प्रकृतिविकृतयः. The eight-fold prakrti² referred to here may be these seven plus the pradhana. The meaning seems to be that kundalini reaching the highest point in her rise towards a yogi's head, the yogi ceases to behave like a viśesa one, as he does not see the gunaparināma-viśesas, including himself. He only sees the tattvāntaraparināmas. prakṛtyāpūra प्रकृत्यापुर (YS IV 2), fulfilment of natural conditions for bringing about an effect. According to Patañjali, natural conditions are responsible for death and a subsequent birth. But they do not determine the form which the next life will take. That is determined by the structure of the citta1 at the time of death, i.e. the cumulative dispositions formed in this and the previous

this name is not quite clear. In the Gitā

prakopa प्रकोप (G 36), disorder. No nervous disorders arise in him who practises chin-lock (jālandhara bandha). prakṣālana प्रशालन (GS I 23), the latter part of bahiṣkṛtadhauti. It consists in standing in water coming up to the navel, protruding the rectum by releasing control of it and washing it with hands so long as all the impurity is

lives, as they stand at the time of death

of his body.

washed away and then withdrawing this.

prakhyā মন্ত্ৰা piṇḍasaṃvitti = prakāsā
মন্ত্ৰায় (VB I 2, II 15, III 35, IV 14),
knowledge. The function of sattvaguṇa is knowledge or consciousness.
Hence it may be said that there is more
of sattva² in men and animals than in
lifeless objects.

pracārasaṃvedana प्रचारसंवेदन (YS III 38), knowing the technique of moving the prāṇa¹⁻² here and there in the body and of leaving the body at will. This latter skill, according to the commentators, is used for entering another man's body.

pracitābha प्रचिताभ (VB III 26), literally, rich in glory; one of the five classes of gods who are the denizens of maharloka महलोक. All these five classes of gods have control over the mahābhūtas and live in the state of dhyāna for 1000 kalpas कल्प (432,000 million years).

pracchardana प्रच्छ ई न (YS I 34), expelling-throwing out completely. The practice of suspending respiration for a shorter or longer time after a complete exhalation helps concentration. This word is here used for exhalation.

prajalpa प्रजल्प (HP I 15), talking too much by which a *yogī's* **yoga** gets futile.

prajāpati प्रजापति (TSB 8), one of the twelve devatās who enter the twelve nāḍīs² and preside over them.

prajīva प्रजीव (G 31), consciousness (= knowledge). When the kuṇḍalinī is aroused, marut (= combined prāṇa

and **apāna**¹) is propelled upwards voluntarily. It is said to acquire the characteristic of consciousness in the sense that it is consciously carried upwards.

prajñā-1 प्रज्ञा-१ (YS I 48, 49; VB I 10, 43), plenary revelation. Nirvicārā-samāpatti reveals the truth. When a citta¹ (gets) merged in an object, the citta¹ in the form of the object is the prajñā, or samādhiprajñā. That is the cittasvarūpa at the moment.

prajñā-2 प्रज्ञा-२ (YS I 49), knowledge (= cognitive consciousness). In this $s\bar{u}tra$ the word prajñā is used in both senses prajñā¹ and prajñā². Knowledge gained by testimony and inference is also called prajñā.

prajñā-3 प्रजा-३ (VB I 48), belief. When the right belief is supported by testimony, inference, as well as by samāpatti, that is superior yoga, according to Vyāsa.

prajñā-4 মনা-४ (YS II 27), realization. There are seven marginal realisations implied in vivekakhyāti. They are called its prāntabhūmiprajñā.

prajñā-5 দ্বনা-৬ (VBh I 20), discriminate discernment of the form of direct perception of the essence of either jīva or brahman. This is one of the means for a yogī to attain the highest realisation.

prajñājyoti प्रज्ञाज्योति = bhūtendriyajayī भूतेन्द्रियजयी (VB III 51), a *yogī* at the third stage of progress in *yoga*. Such *yogīs* scrupulously guard what they

have achieved and have the wherewithal to achieve that which is yet to be achieved. They obviously have control over **bhūtas** as well as **indriyas** (material as well as immaterial nature). VB considers them to be those who have mastered the third of the **sabījasamādhis**, viz. **savicārāsamāpatti** (VB III 51).

prajñāprasāda प्रजाप्रसाद (VB I 47), plenary inspiration. When by nirvicārāsamāpatti, a person is thoroughly inspired by the realization that he or she is puruṣa¹, who is entirely different from the transmigrating self; then he or she being free from all miseries, sees all the others who are miserable, as if he or she has risen much above them.

prajñāloka-1 प्रज्ञालोक-१ (VBh I 47), range

of sight called **prajñā**. In the state of **nirvicārā**, the *yogī* is able to perceive directly all the stages of subtle object simultaneously. Therefore, it is described as special range of sight. **Vaiśāradya** and **prājña** are synonymous here. **prajñāloka-2 प्रजालोक-२** (YS, VB, VM III 5), light of insight. As a result of mastery over **saṃyama**, there arises the light of insight of **samādhi**.

prajñāviveka সন্মানিন্ন (VB I 20), samādhiprajñā. cf. samprajñāta. Samprajñāta (yoga) is samādhi with a prajñā, which is some kind of consciousness different from our ordinary consciousness; because the knowing citta² having merged in the content of his consciousness there remains no distinction between the knower, the known and the knowledge of the known by the knower.

praṇava-1 प्रणव-१ (YS I 27; GS VI 11; YTU 63-4; KU 3), name of Īśvara. Thinking of Īśvara while repeating this name to which active attention can easily be given-is an aid to adopting to introspective attitude and overcoming the obstacles in the path of yoga. According to GS, it is the sacred monosyllabic mantra which is, for the purposes of sthūladhyāna, to be visualised (as written) inside the halakṣa triangle in the ovary of the twelve petalled lotus, which in its turn, is to be imagined in the ovary of the mahāpadma.

After success in prānāyāma² is attained by a *yogi* he is advised by YTU to chant the sacred syllable prolonged as much as possible. This is supposed to eradicate the effects of the evil deeds of the past and to remove all the obstacles in the path of yoga4. As success in yoga4 begins to dawn the $yog\bar{i}$ is said to be in the **ārambh**āvasthā of yoga². The three lokas, the three Vedas, the three sandhyās, the three svaras, the three agnis and the three gunas are all supposed by this Upanisad to be in the three letters of this mantra1. The person who understands these three and the half-letter at the end of the mantra (the nasal sound) is himself the all embracing ultimate Reality. The akāra (a) of aum moves

the hṛṭpadma, ukāra (u) opens it up, and the makāra (m) brings the nāda (centrally aroused sensation of sound). The last half-syllable (ardhamātrā) अर्थमात्रा is said to be niścala (unmoving). Perhaps the idea is that in the end there are no vibrations of the vocal organs. One mental recitation counts as one mātrā for the purposes of prāṇāyāma².

By YSH om is mentioned as one of the padastha पदस्य dhyeyas and is described as situated in front of the nose along with the śūnya and anāhata. The fruit of contemplation on all these is nirmala jñāna (pure knowledge).

praṇava-2 प्रणव-२ (DBU 14, 17), the Supreme Being (ātmā²). The light which the yogi's mind sees between the eyebrows for the purpose of tejodhyāna is here described as ātmā² in the form of light (= tejomayabrahma तेजोमयब्रह्म).

praṇava-३ प्रणव-३ (VBh I 28), aum. VBh quotes Garuḍa Purāṇa while explaining its meaning. The three syllables of praṇava represent the manifest (vyakta), unmanifest (avayakta) and the puruṣa. One who realises this meaning of praṇava, acquires one-pointedness of mind.

praṇavātmaka (prāṇāyāma) प्रणवात्मक (प्राणायाम) (VS III 1), having praṇava as an essential component. VS while describing prāṇāyāma exclusively connects it with praṇava. The three phases of prāṇāyāma, namely-

pūraka, kumbhaka and recaka are represented by the three letters of praṇava, A, U, and M, respectively.

praṇāmitva प्रणामित्व (VB IV 14), causing pressure. Air causes pressure on the skin and the atmosphere on the internal organs. Hence air is called *praṇāmi* प्रणामी by VB in III 44.

praṇidhāna प्रणिधान (VB I 29; VBh I 23, 28), devotion. It is a special kind of abstract thought which ultimately leads to asamprajñāta samādhi. According to VBh, meditation on brahma along with the recitation of praṇava (om) is praṇidhāna.

pratanu प्रतन् (VBh II 2), weakening, reducing the quality of. The yoga in the form of action attenuates afflictions (kleśas) by which the subliminal impression are not able to rise again during the state of jīvanmukti.

pratipakṣabhāvana प्रतिपक्षभावन (YS II 33, 34), reminding oneself of the other side of the picture in the context of the danger of yielding to temptation of hiṃsā etc.

pratipat प्रतिपत् (YKU III 1, 2; MBU II (1) 6), one of the three kinds of gazes adopted at the time of abhyāsa (dhyāna and japa). It consists in keeping the eyes half open.

MBU calls it one of the three dṛṣṭis¹ (gazes). When the tārakalakṣya is seen with eyes half-closed, the dṛṣṭi¹ is called pratipat.

Pratipat is the first day of the each lunar fortnight of the month.

pratipatti प्रतिपत्ति (YS, VB, III 53), distinctive knowledge or knowledge born of discrimination which is free from doubt.

pratiprasava-1 प्रतिप्रसव-१ (YS II 10, IV 34; VM IV 34), a citta¹ reverting to the aliṅga (perfectly undifferentiated) state, which is the prime matter, by losing its identity as well as its characteristic of being predominantly sāttvika and shedding all its practical as well as scientifically real forms. A citta as an individual vanishes in asmitā. Asmitā vanishes in liṅgamātra and when this disappears nothing but aliṅga remains. This is pratiprasava.

pratiprasava-2 प्रतिप्रसव-२ (VBh II 10, III 50, IV 34), involution. It is opposed to prasava (evolution, generation, or birth). This is the highest state wherein the elements of prakṛti return to their own cause leading to the isolation of the draṣṭā.

pratibhā प्रतिभा (VB III 54), plenary inspiration. When by being fully successful in saṃyama a yogī gets perfectly inspired he can hear, feel, and smell what people cannot do through their sense organs. In other words, he becomes omniscient in the matter of perceptions.

pratisaṃvedana प्रतिसंवेदन (VB IV 19), introspection; puruṣa¹ is the introspector (pratisaṃvedī प्रतिसंवेदी) of mental processes. Citta² (mind) cannot introspect its own processes.

It can only introspect the psychological objects of those processes. Though introspection is not quite the correct word for the **puruṣas¹** apprehension of the processes of its **citta²**, it is better than seeing.

pratisarga प्रतिसर्ग (VB III 51), pratiprasava, which consists in the reverse evolution of the transmigrating soul into indeterminate primeval nature.

pratyakcetana-1 प्रत्यक्चेतन-१ (VM I 29), avidyāvān अविद्यावान् **puruṣa².**

pratyakcetana-2 प्रत्यक्येतन-२ (VM II 24), puruṣa¹. cf. pratyakcetanā.

pratyakcetanā प्रत्यक्वेतना (YS I 29), the introspective attitude which a devotee of God acquires. He begins to wonder how he got into this mess and is keen to get out of it. Pratyakcetanādhigama is the adoption of this attitude.

pratyakcetanādhigama प्रत्यक्चेतनाधिगम

(VB I 29), a different interpretation of the term **pratyakcetanādhigama** used in YS I 29, Vyāsa and other commentators think that the $yog\bar{i}$ who recites the **mantra**³ **om** gets the knowledge of **puruṣa**¹ by analogy. But a more consistent interpretation of this $s\bar{u}tra$ seems to be that, as a result of devotion to \bar{i} svara and recitation of the **mantra**³, the **om**, $yog\bar{i}$ develops the introspective attitude.

Knowledge of **puruṣa¹**, according to *Patañjali*, does not seem to be so easy to acquire.

The compound can thus be resolved in two different ways. These commenta-

tors resolve it as **pratyakcetana**¹ + **adhigama**. The more correct way, however, is to understand it as **pratyakcetanā** + **adhigama**.

pratyaktva प्रत्यक्त्व (TBU I 38), being inside, here **brahman** who resides within everybody in the form of **caitanya** (a conscious being).

Vṛttivismaraṇa वृत्तिविस्मरण (stopping of cittavṛttis) is to be practised until brahman is seen the yogī spontaneously and instantaneously. Samādhi itself is not the goal. Realisation of brahman should be aimed at.

pratyakṣa-1 प्रत्यक्ष-१ (YS, VBI7), senseperception- one of the three ways of obtaining dependable knowledge.

pratyakṣa-2 प्रत्यक्ष-२ (VB I 32), direct experience. In this sense there can be *yogaja* (योगज) **pratyakṣa** also, which is not a **cittavṛtti.**

pratyaksa-3 प्रत्यक्ष-३ (GS I 9, 11), one of the seven sādhanās (practices) of ghatasthayoga (hathayoga). It is achieved by the practice of dhyāna. It helps in knowing the **ātmā**, not merely by reasoning, nor by sense-perception, but by means of a still more direct apprehension. It can be said to be a mystic knowledge in so far as only the person who has it knows what it is. According to Gorakşa, ātmajñāna (knowledge of the ātmā) ātmasamsthiti आत्मसंस्थिति (identity with ātmā), which is the ultimate object of voga and which is mukti (liberation) itself.

According to Gheraṇḍa, though **ātma- pratyakṣa** is obtained by **samādhi**, it may be that the **ātmapratyakṣa** of Gheraṇḍa is not exactly the same as tattvasaṃsthiti तत्त्वसंस्थिति (abiding in state of realisation) of Gorakṣa.

pratyakṣakaraṇapañcaka प्रत्यक्षकरण-पञ्चक (SSP I 61), The five instruments of perception. These are action, desire, moon, sun and fire.

pratyaksayajana प्रत्यक्षयजन (BVU 53, 57), a kind of \mathbf{yoga}^3 in which the $yog\bar{i}$ sees clearly in his own body the niskala (undifferentiated) hamsa (brahman). First the $yog\bar{i}$ practises $pr\bar{a}n\bar{a}v\bar{a}ma^2$ with recaka (expiration), pūraka (inspiration) and kumbhaka (suspension of breathing) for three hours everyday. Then he performs namaskāravoga and jñānamudrā, which is not just a posture of the body but essentially a state of the mind. In BVU 64 the verb prakalpayet प्रकल्पयेत (do with the mind) is used instead of dhārayet धारयेत् (adopt) and in 66 paramahamsa is described as jñānamudrātmarūpaka (of the nature of $j\tilde{n}\bar{a}na$). If pratyaksayajana is successful, the $yog\bar{i}$ sees in his own body the niskalabindu i.e. the brahman. Pratyakşayajana is thus a kind of dhyānayoga.

pratyagātmā प्रत्यगात्मा (PBU (U) 16), individual soul. This is isolated state of jīva but affected by māyā.

pratyaya-1 प्रत्यय-१ (YS I 18, III 2, 12, 17, 19), content of a citta or of samāpatti.

pratyaya-2 प्रत्यय-२ (YSI19), implication, asamprajñāta nirodha is implied in the very mode of existence of prakṛtilaya. It is bhavapratyaya for him.

pratyaya-3 মন্ব্য-३ (YS II 20), cittavṛṭṭi.

Although puruṣa¹ is not prākṛṭa সাকৃন (a natural phenomenon). He introspects the processes and contents of consciousness as well as the vṛṭṭi-less citta, which are all natural phenomena. pratyaya-4 মন্ব্য-४ (YS III 35, IV 27), belief. It is not just a passing mental process, but a part and parcel of the structure of mind, and is abiding. It is the knowledge on the basis of which we are justified in acting as we are morally certain about it.

pratyaya-5 प्रत्यय-५ (SK 46), experiences. An infinite variety of experiences is made available by buddhi to puruşa². These are placed by *Īśvarakrsna* in four broad divisions- viparyaya, aśakti, tusti and siddhi- which are subdivided to form as many as fifty kinds of experiences. And there are innumerable varieties of each kind of experience. All this diversity is caused by the three gunas mixing in different proportions. Although experience predominantly sāttvika affair, rajas and tamas also play their part in it and the three together produce a variety of sāttvika phenomena, which can themselves be arranged in a sattvikatāmasa scale. These experiences are marks of success and failure in the long course of progress towards the attainment of $kevalaj\tilde{n}\bar{a}na$. They constitute what $\bar{I}\acute{s}varakrsna$ calls the **pratyayasarga**.

pratyaya-6 प्रत्यय-६ (VM I 10, 18), cause. Asamprajñāta (yoga) is (YS I 18) said to be preceded by the practice of the cause of vrtti-lessness (a state in which there are no mental processes) and nidrā (YS I 10) to be the cause of the absence of jagrat, svapna and susupti. pratyaya-7 प्रत्यय-७ (YS I 10; VB II 23), that which they call so and so, that which is believed to be so and so. Nidra is the vrtti of which the content is that which they call abhāva3. Similarly, one can have no idea of drsya3 or the drasta alone without thinking of that which is known as the other. Drasta and drśya3 are relative terms. This is what Vyāsa means.

pratyayakāraṇa प्रत्यकारण (VB II 28), when the knowledge about the unseen object comes through seen object it is called pratyayakāraṇa, for example the knowledge of fire due to smoke seen.

pratyayātmaka प्रत्यवात्मक (VB III 15), having the nature of cognition. The perceived mind (paridṛṣṭacitta) has the nature of cognition as opposed to unperceived mind aparidṛṣṭacitta having the nature of the latent impressions of the objects only (cf. vastumātrātmaka).

pratyayānupaśya प्रत्ययानुपश्य (YS, VBh II 20), witness for the modifications of

mind. A contradictory quality of draṣṭā, who even being pure witness for the modifications of mind, i.e., he is aware of the modification which pertains to the mind and being aware of that modification, he appears to be similar to that though he is dissimilar to it.

pratyavāya प्रत्यवाय (BG II 40; BY XI 2), harm, chances of incurring sin owing to the defects in the utterance of mantras. If in the performances of the rituals prescribed by the *Vedas* there be such defects then these observances, instead of producing the desired fruit, result in harm to the performer. BY declares that while following yogic path, there is no chance of incurring sin since obstacles, defects, etc. cannot exist on account of everything being done in accordance with yoga.

pratyāharaṇa प्रत्याहरण (G 55), drawing. The centre in the navel draws towards itself the stream of nectar flowing from the centre at the base of the palate. The former is called *bhāskara* भास्कर (the sun), and the latter **candra**, (the moon).

pratyāhāra-1 प्रत्याहार-१ (YS II 29, 54-55; MBU I (1) 7), withdrawal from the objects of feeling and desire. In the absence of cittavṛttis (cognitive mental processes), there remains only the svarūpa of citta with pratyāhāra of indriyas (the affective - conative aspects of citta) which withdraw from their respective objects as if it were in imitation of cittasvarūpa. What

nirodha is for vṛttis¹ of citta², pratyāhāra is for its indriya's. Pratyāhāra is one of the eight components of yoga1 and is comparatively a bahiranga (external member) as it has to do with the objects existing in the world outside. Indriyārthebhyah manonirodhanam इन्द्रियार्थेभ्यः मनोनिरोधनम (withdrawal of mental processes from the indrivas) of MBU is the same as svavisayāsamprayoga स्वविषयासम्प्रयोग of the indriyas¹ for YS. It is pratyāhāra. pratyāhāra-2 प्रत्याहार-२ (BY VIII 1, 32, 50-2, IX 35, XII 46), Yājñavalkya has used this word in a very wide sense. It includes pratyāhāra¹. But in addition to that the term also covers control of prāna², of which the sphere of action is the whole body, cittavrttinirodha, control of manas, buddhi and ahankāra and repeated attempt of vairāja. pratyāhāra-3 प्रत्याहार-३ (GS IV 1-7), literally means drawing back. It is psychological process to restrain the mind from various objects. Mind usually goes out to the five kinds of objects (hearing, touching, sight, tasting, and smelling) through the channel of five sense organs (i.e., ear, touch, eye, tongue, and nose) respectively. Accordingly the pratyāhāra is five-fold. It destroys the enemies like desire and passion etc.

pratyāhāra-4 प्रत्याहार-४ (VS III 57, 61), one of the eight-fold yoga enumerated by Vasiṣṭha. Pratyāhāra usually means withdrawal of sense organs but Vasistha describes three other different ways to practise it besides the traditional method; (1) visualising every object to be **Atman** within oneself, (2) performance of *nityakarmas* mentally without any external means, and (3) holding the vāyu successively at the eighteen vital points.

pratyāhāra-5 प्रत्याहार-५ (G 54-55), according to Gorakṣa, pratyāhāra is achieved through viparītakaraṇī mudrā. It consists in upholding the nectar oozing from the moon and not allowing it to go down to be consumed by the sun in the navel region. This description of pratyāhāra is somewhat unique and not available in any other yogic texts.

pratyāhāra-6 प्रत्याहार-६ (SSP II 36), control of mind, intellect, ego and cittathe four internal organs-is called pratyāhāra, because these four internal organs are responsible for giving consciousness to the sense organs.

pratyupabhoga प्रत्युपभोग (SK 37), bhoga which is in fact the experience of men and animals but is introspected by puruṣa¹. Puruṣa¹ is therefore, said to see the bhoga and apavarga of his citta (cf. YS II 18). This is his pratyupabhoga. Puruṣa¹ does not really enjoy or reject or suffer according to Patañjali.

Īśvarakṛṣṇa, however, believes that **puruṣa** suffers the miseries of old age and the agony of death. He would therefore, enjoy the pleasures also. All

this would be his **pratyupabhoga** arranged for him by **buddhi**.

prathamānga प्रथमांग (HPI 17), first component, here, the **āsanas**. Svātmārāma mentions four components of hathayoga such as āsana, kumbhaka, mudrā, and nādānusandhāna. These are gradual steps in the practice of hathayoga. Svātmārāma, however, does not include yama and niyama as the components of yoga. At one place, he says that mitāhāra is best among the yamas and ahimsa is best among the niyamas which shows that he was familiar with these terms and their importance in the practice of yoga. Yet, he does not take them as essential components of his hathayoga.

pradīpa प्रदीप (SK 13,36), light. Two different things are compared to light in these two kārikās. The comparison of **indrivas** to light in 36 can be easily understood. In SK13, however, gunavrtti is compared to light. Sānkhyataruvasanta सांख्यतरुवसन्त quotes mūlatantra मूलतन्त्र where vṛtti is described as bhāgaguṇābhyarthāntaravṛtti भागग्णा-भ्यर्थान्तरवृत्ति. This affords a clue to the meaning of this simile. Gunavṛtti is an arthāntara अर्थान्तर vṛtti (a new thing arising out of a mixture of its components e.g., water from a chemical composition of hydrogen and oxygen), just as light is. The meaning may be that the composition of the three gunas gives rise to innumerable new phenomena just as a chemical composition of many

things produces light. The three **guṇas** having different characteristics combine to produce individual living and non-living beings.

pradhāna-1 प्रधान-१ (SK 11, 37; BY III 25, IX 184), prakṛti¹.

pradhāna-2 प्रधान-२ (SK 21, 57, 68), prakṛti = liṅga¹.

pradhānajaya प्रधानजय (YS III 48), conquest of the primordial material cause. VB explains it as mastery over all evolving causes (prakṛti) and evolved effects (vikāra).

prabodha प्रजोध (SSP I 24), awareness or awakening. It has five qualities: (1) udaya,-rising, prosperity, (2) ullāsasplendour, (3) avabhāsa-manifestation, (4) vikāsa-development, and (5) prabhā-lustre.

prabhāva प्रभाव (G 82), brilliance, like that of lightening, appears in the hṛtpadma (the centre in the chest) when it is pierced by prāṇāyāma², i.e. as the result of a successful practice of prāṇāyāma².

prabhu प्रश्न (YS IV 18), the lord, i.e. puruṣa. Puruṣa is unchangeable; yet the state of citta or object cognised by citta is always known to him, and therefore puruṣa is prabhu.

prabhudeva प्रभुदेव (HP I 8), name of one of the great siddhas of hathayoga.

prabhūta মখুন (SK 39), material objects from the mocroscopically small particles of matter to the biggest masses like the earth. The **bhūtas** are ordinarily supposed to be the **śānta**, **ghora** and mūḍha viśeṣas. But according to Īśvarakṛṣṇa, the śānta, ghora and mūḍha viśeṣas are the sūkṣmas, mātāpitṛjas and prabhūtas, in which predominate sattva, rajas and tamas respectively. These are the various kinds of forms which the bhūtas take. pramattatā प्रमत्ताता (YKU I 59), pramāda.

pramā प्रमा (VM I 17), valid knowledge. Pramā is true knowledge of an object not cognised earlier.

pramāna-1 प्रमाण-१ (SK 4; YS I 6, 7), source of belief. We belive what we perceive or infer or learn from reliable testimony. Hence perception, inference and testimony are called pramanas. We act according to our beliefs, though they sometimes prove to be wrong. Knowledge gained by the pramanas is not necessarily correct knowledge. But for those who are not yogis these are the only methods of gaining correct knowledge hence this class of cittavrttis. If knowledge gained by one pramāna contradicts that gained from another pramāṇa, only one of them can be correct. It is only when the knowledge acquired through different pramānas forms a consistent systematic whole that it is believed to be correct knowledge.

pramāṇa-2 प्रमाण-२ (BG III 21, XVI 24), authentic source of knowledge, authority. Path shown by a superior person becomes authority for an ordinary person. But the scriptures are authority in themselves.

pramāda प्रमाद (YS, VB, VBh I 30), negligence, one of the nine antarāyas. $Vy\bar{a}sa$ understands it as the lack of dedicated practice of the means to concentration. VBh understands pramāda as the lack of enthusiasm in the practice of yoga due to phlegm and tamas. Phlegm leads to the heaviness of the body and tamas is heaviness of the mind and therefore lack of activity. pramādī प्रमादी (HP V 1), erroneous practitioner. According to Svātmārāma, one who practises yoga erroneously, especially prānāyāma, suffers from diseases of vāta, pitta and kapha. prameya प्रमोध (SK 4), dependable knowledge. The process of having such knowledge is pramāna. The knowledge which is so acquired is prameya. It would not be wrong to say, therefore, that prameya is knowledge or belief. One believes that which one perceives, or infers from what one has perceived or hears from a reliable person, or reads in an authentic book so long as it is not contradicted to knowledge from another pramāņa.

prayatna प्रयत्न (YS II 47), effort, Prayatnaśaithilya प्रयत्नशैधिल्य is, therefore,
minimizing of effort of every kind.
According to the old Sanskrit terminology, even the reflexes which are
responsible for maintaining life come
under prayatna. Yogis practise āsana¹
so that they might get accustomed to
remain effortless in this sense for
sometime.

prayāga प्रयाग (DU IV 49), name of a holy place situated in the region of the heart. prayāsa प्रयास (HP I 15), exertion. Yogic practices get futile by over effort leading to exertion. Therefore these practices should be done without any undue exertion. This is supported by the concept of *Prayatnaśaithilya* in YS II 47. Prayāsa is one of the six disturbing factors. The other five factors are niyamāgraha, janasaṅga, atyāhāra, prajalpa and laulya.

pralaya-1 মল্ব-१ (SK 69), disappearance.
The pralaya of all kinds of viśeṣā-viśeṣabhūtas বিষ্ণাদার্বিষ্ণ দুন including sūkṣma, mātāpitṛja and prabhūta viśeṣa is one of the three topics discussed in the puruṣārthajñāna पुरुषार्थज्ञान propounded by Kapila, which is contained in the Kārikās. Bhūtāni भूतानि in this context include mahat and all the forms which it takes. Pralaya is their disappearance.

pralaya-2 प्रलय-२ (BG XIV 14-15), dissolution, death. Death during domination of sattva leads to the highest world; during rajas one is born again to perform the action and during tamas, one is born in lower species.

pravṛttamātrajyoti प्रवृत्तमात्रज्योति = prathamakalpika प्रथमकल्पिक (VB III 51), a yogī at the first stage of success in yoga. Jyoti here may mean the jyoti of the jyotiṣmatīpravṛtti (centrally aroused visual sensation) or it may mean intuitive knowledge gained by samyama, as VM and VB think. Acco-

rding to the latter meaning, though a $yog\bar{i}$ at this first stage of development is unable to know the whole truth intuitively, he can know some objects as yet unknown by performing **saṃyama** on them.

pravṛtti-1 प्रवृत्ति-१ (YS I 35, III 25), vivid sensation not caused by any external stimulation. It may be a cortical sensation caused by a direct stimulation of a cerebral centre. A pravṛtti facilitates dhāraṇā (concentration).

pravṛtti-2 प्रवृत्ति-२ (YS IV 5; VB II 23), urge, dispositions to action. While asmitāmātra (YS IV 4) is one, the cittas¹ are many, the individual difference among the cittas being of different disposition to action in them. The material of which cittas¹ are made, comes from asmitāmātra.

According to SK, there is an inner urge in every **puruṣa**² to do this and that which ultimately proves to be in his interest. Reference is to the search for the surest means of getting rid of pain. That 'means' is kevalajñāna, which brings kaivalya. Īśvarakṛṣṇa attributes this urge to **pradhāna**. The meaning is that it is by virtue of this component that a **puruṣa**² is equipped with this urge. The presence of this urge in every **puruṣa** is also an argument given by Īśvarakṛṣṇa in support of the thesis that there are individual **puruṣas**.

pravṛtti-3 प्रवृत्ति-३ (SK 12; VB I 2, II 15, IV 3), activity. It is one of the three functions of the guṇas¹ the other two

being knowing and retrading activity. Obviously it is the function of rajas¹, while prakāśa is that of sattva² and niyamana, that of tamas². Rajas¹, therefore, is that which moves. It may well be called energy or source of energy.

Sattva and tamas are also movements. But sattva-dominant movements are too fast and tamas-dominant ones too slow to be noticed, the rajas movements are of intermediate frequencies. They can be called apparent movements.

pravṛtti-4 সন্থি (SK 15), actual existence, happening, appearing. The innumerable particular existents would not be there if there was nothing corresponding to them as their potentiality-śakti-which becomes actual. This is advanced by *Īśvarakṛṣṇa* as one of the proofs of the reality of prakṛti, which is the potentiality of everything that actually exists.

pravṛtti-5 ঘবৃন্ধি-৬ (BY XI 39, 46), attached duty, one of the two-fold Vedic duties. To perform the daily duties according to the rules of one's āśrama and looking after the family members (wife, sons) is called pravṛtta karma. One who performs these duties, attains celestial world.

praśanta प्रशान्त (ANU 14), a person, presumably a *yogi*, who does not perceive (by seeing, hearing, or touching), the objects around him. Obviously smelling and tasting are not excluded.

Praśānti ম্যান্বি (profound peace) is not mentioned as a yogāṅga, or a part of yogāṅga; but the description of a praśānta person follows that of kumbhaka¹, which shows that praśānti follows upon a successful practice of kumbhaka¹.

praśvāsa प्रश्वास (YS II 49), exhalation. But inhalation (śvāsa) and exhalation (praśvāsa) are stopped in the state of prāṇāyāma² as Patañjali defines it.

prasaṅkhyāna प्रसंख्यान (YS IV 29), realization that every thing prākṛtika is other than puruṣa and that even the citta², which realizes the truth is not the real self. Even after such realization there is the possibility of a relapse. Only when realization is free from all setbacks there is, in Patañjali's words, sarvathā (for all the time) vivekakhyāti, by virtue of which the yogī is in the state which Patañjali calls dharmameghasamādhi.

prasava ঘমন (SK 11, 65), assuming forms. Vyakta (manifest nature) and for that matter avyakta (the unmanifest) also assumes various forms. All the vyaktas are forms of avyakta², yet they are not called avyakta² which in itself has no form. Avyakta² is called prasavadharmī ঘমনামান because, although it is formless as avyakta² or pradhāna, it can assume forms. When it does so it becomes vyakta.

prasādana प्रसादन (YS, VM I 33), purification. VM considers the opposites of maitrī (friendship), karuṇā (sympa-

thy), muditā (happiness) and upekṣā (indifference) which bring about cittaprasādana to be impurities. Hence the practice of these virtues is purifying. Perhaps a more appropriate meaning of cittaprasādana in this context would be serenity of mind.

prasiddhi प्रसिद्ध (SK 6), dependable knowledge. Mostly knowledge is gained by sense-perception; the knowledge of imperceptible objects is gained by inference. That which is neither perceived nor inferred, is believed on the strength of testimony. prasupta प्रसप्त (YS II 4; VM II 10), dormant. Prasupti प्रसप्ति is the third stage of inactivity of the kleśas. This is the condition of one's kleśa in the state of dharmameghasamādhi1. The kleśas are then perfectly sterile even before pratiprasava (dissolution of the citta¹ in which they inhere), though they disappear only with pratiprasava (cf. YS II 10). The kleśas remain in the citta¹ so long as it is not dis-integrated. But in the state of dharmameghasamādhi¹, before actual dissolution, they remain perfectly inactive, as if they were not there at all. This is what $Vy\bar{a}sa$

prasvedajanana प्रस्वेदजनन (TSM 104), generating perspiration. The initial state of prāṇāyāma causes perspiration.

seed).

means by dagdhabijakalpa (like fry-

prahara ঘ্ৰন্থ (HP III 108), three hours, therefore, *praharārdha* means ninety minutes.

whatever one desires, one of the well-known eight siddhis³. It is attained by performing saṃyama on the material aspect of prakṛti (nature) at different levels of differentiation.

prākṛta সাকৃন (BY IX 72), natural. Immortality is defined as prākrta.

prākṛtika प्राकृतिक (SK 43), natural, innate, unlearnt. Some bhāvas are acquired, some are natural and some such that though they are acquired with difficulty by ordinary persons, they are fully developed without any effort on their part in the minds of people of extraordinary ability like *Kapila*. This is *Īśvarakṛṣṇa's* theory.

prākṛtika bandha प्राकृतिकबन्ध (VBh I 24), prākṛtika bondage. One of the three bondages recognised by sāṅkhyas. The bondage of prakṛtilayas is called prākṛtika bandha. Here remains the sense of 'I' in the eight prakṛtis i.e., mahat, ahaṅkāra, manas, and the five tanmātrās. Other two bandhas are vaikārika bandha and dakṣiṇā bandha.

prājāpatya সাজাদন্য (VB III 26), maharloka महलोंक. It is one of the regions in space-the fourth world. As VB explains YS III 26, by saṃyama on the sun the yogī gets an intuitive knowledge of all the worlds in space i.e. the entire universe.

prājña-1 সাল- (YKU III 21; YCU 2), one of the three puruṣas³ (cf. taijas). For YCU it is one of the four puruṣas¹ (introspectors of the experiences of the various states in which human beings live). **Prājña** is the experiencer of the **ānanda** (bliss) of **suṣupti** (dreamless sleep). The enjoyer of the waking, dreaming, sleeping without dreaming and the state beyond that is in fact the **ātmā**² (the Supreme Reality in us). It is given various aspects and is said to be this **puruṣa**³ or that. The **ātmā**² is **viśva**. It is **taijas**. It is **prājña**. It is **para**.

prājña-2 ঘার-২ (BY II 91, 92), oṃkāra, being one, is divided into three stages. When it is situated in the space of heart, it is called prājña. It is also known as ānandabhuk. The other two stages are sthūla and prakṛtibhuk.

prāṇa-1 प्राण-१ (G 24-9, 38, 42; BY II 22, IX 33), respiration-one of the five principal vāyus (the other four being apāna, samāna, udāna and vyāna), the autonomic relfex functions. \bar{I} śvarakṛṣṇa tells us that the five $v\bar{a}yus$ are sāmānyakaraņavṛttis, i.e. they are the combined function of all the thirteen karanas (Kārikā 29), They are thus the functions of the $j\bar{i}va^1$ (living being) and no wonder Vyāsa gives the name jīvana to them. He calls them samastendriyavṛtti समस्तेन्द्रियवृत्ति (VB III 39). There is no doubt that the general business of life is promoted by means of these autonomic functions. Therefore, VB differentiates the five vāyus with reference to the different spheres of these autonomic functions namely:

- udāna from the nose-mouth region to the head:
- 2) **prāṇa** from the chest to the nosemouth region;
- 3) **samāna** from the chest to the abdomen:
- 4) **apāna** from the abdominal region to the soles of the feet; and
- 5) **vyāna** the whole body.

Thus according to $Vy\bar{a}sa$, the sphere of action of the **prāṇavāyu** extends from the mouth and the nose to the chest, where the lungs are situated. According to BY **prāṇa**¹ eats up the body i.e. constant respiration exhausts the life force and the body ceases to live as a necessary consequence.

prāṇa-2 प्राण-२ (HP I 48; SK 29; VB III 39; BY II 140, III 30, IX 131, 132), all the autonomic reflexes which preserve life. When they cease to function, life ceases. Hence prāṇa is life.

According to BY, if one dies while reciting the **vyāhṛtis**, then he or she ceases to exist as an individual-either **vyakta** or **avyakta**. He or she then loses himself or herself in **puruṣas³** (**brahman**).

prāṇa-3 प्राण-३ (G 17, 23, 40, 52), all the nervous currents, the motor impulses-which impel reflex and instinctive actions of the body. According to G, all the impulses which run along the autonomic nerves together appear as if they were a living being residing in the autonomic nervous system. Vyāsa considers the autonomic nervous functions to be life (cf. prāna¹). Prāṇa²

and **prāṇa**³ are intimately connected, as the latter bring about the former.

prāṇa-4 प्राण-४ (G 61, 69-73, 94), internally aroused cutaneous sensation. A series of them is experienced by the yogīs who perceive them as something rising up their back. This plays a leading part in the dhāraṇās explained by G and GS, because the yogī has to direct prāṇa⁴ in this sense, to the dhyānasthāna prescribed for each of these dhāraṇās. Though no object actually moves, when the yogī tries to move the kind of object he has previously perceived as moving, he experiences the sensations wherever he takes this object.

prāṇa-5 प्राण-५ (G 43, 45; YS I 34), breath. This is the only sense in which Patañjali has used this word.

prāṇa-6 प्राण-६ (VS II 7, 14, 15, 42, 43), vital air. Breath is called prāṇa because it moves on continuously throughout the body and reaches the basic circle (mūlacakra) of the individual self.

prāṇa-7 সাজ-৬ (VS II 44), one of the most important amongst the ten vāyus. It is said to be residing below the kanda. It pervades mouth, nostrils, heart, navel region and toes.

prāṇakarma प्राणकर्म (VS II 51), the function of prāṇa. The main function of prāṇa is inhalation, exhalation and coughing.

prāṇajaya-1 प्राणजय-१ (SAU I (7) 42-2), raising prāṇa up along the suṣumnā to the head. Mahāmudrā is said to be

a potent means of bringing about this. This rising of prāṇa⁴ is only a matter of internally aroused sensations. Something is felt rising up the spinal cord and that is called prāṇa. According to Patañjali, it will probably be a viṣayavatīpravṛtti of the tactual type. It may be the beginning of the arousal of kuṇḍalinī¹: but kuṇḍalinī is a much more complete and richer affair, which involves the whole organism. Prāṇajaya may be only what Gheraṇḍa calls śakticālana (cf. mahāmudrā).

prāṇajaya-2 प्राणजय-२ (VS III 32, 34), control of prāṇa. Through prāṇā-yāma one can achieve prāṇajaya.

prāṇadhāraṇā प्राणधारणा (ANU 7), control of vital air or retention of breath. It annihilates all impurities originated through sense organs.

prāṇarodha प्राणरोध (YKU I 19, 53, 62), prāṇarodha, prāṇa nirodha, prāṇāyāma, prāṇābhyāsa and kumbhaka are all used as synonyms in this context. The essence of this yogāṅga is regulating respiration and restraining breath for a longer or shorter time.

prāṇavāta प्राणवात (HP IV 114), pavana¹.

So long as a person has not acquired command of his prāṇavāta, if he calls himself a yogī it is hypocrisy and baseless boast.

prāṇavidyā प्राणिवद्या (YCU 36), science of prāṇa which is considered here as mahāvidyā. This consists in knowing the process of ajapāgāyatrī.

prāṇasaṃyama-1 प्राणसंयम-१ (TBU I 16,

33), the nirodha (cessation) of all the vṛttis¹. It resembles samādhi¹ which is here called vṛttivismaraṇa वृत्तिविस्मरण (non-existence of vṛttis). But the difference between the two states is that while brahmatvabhāvanā ब्रह्मत्वभावना is present and brings about prāṇa-saṃyama, there is no bhāvanā present in samādhi. It appears that for this Upaniṣad brahmabhāvanā which is a permanent disposition in the yogī's mind and not a temporal vṛtti¹, is present in prāṇasaṃyama, while samādhi is some kind of complete unconsciousness.

prāṇasaṃyama-2 प्राणसंयम-२ (YTU 24, G 4; HP II 41, III 120), prāṇāyāma. prāṇasaṃrodha प्राणसंरोध (DBU 41; BY I 15, III 10, IX 33, 35, X 1), one of the six yogāṅgas (components of yoga) Prāṇasaṃyama² and prāṇasaṃrodha are used as synonyms of prāṇāyāma² in YTU and BY.

prāṇasaṅgrahaṇa प्राणसंग्रहण (HP II 5), prāṇāyāma. A yogī cannot succeed in prāṇāyāma so long as all his nāḍīs are not completely purified.

prāṇaspandanirodha प्राणस्पन्दिनरोध (SAU I (7) 28-36), control of the vibration or motion of prāṇa, through variety of means. SAU verse 29 to 36 explains these means in detail.

prāṇāyāma-1 সাणাবাদ-१ (YS II 49; HP II 71-2; G 44, 46), absence of inspiration as well as expiration, i.e. a pause in breathing, which may follow a deliberate process of short or long exhalation

or inhalation. It may come up suddenly while either expiration or inspiration is in progress. According to Patañjali, the essence of prāṇāyāma is this pause. It is called by Patañjali śvāsapraśvāsayorgativicchedah श्वासप्रश्वास-योगीतिविच्छेदः (suspension of inspiration and expiration). The lungs being either (1) completely empty, or (2) full to capacity, or (3) in a state of some sort of balance between these two extremes, characterises the first three types of prānāyāma of Patañjali. His fourth type of prānāyāma is independent of the variations in the position of chest brought about by complete or partial exhalation or inhalation. It appears that Patanjali's word visava³ stands for the respiratory activity performed by a sādhaka (practitioner) and his word vrtti² for the position of the chest.

His fourth **prāṇāyāma** comes without any **viṣaya**³-of its own accord-inspite of the **sādhaka** and his occupation, at any odd time. It does not require any respiratory action-exhalatory or inhalatory, intentional or unintentional. G advises contemplation of the cool, full, white disc of the moon, which looks like an ocean of nectar, in the state of **prāṇāyāma** after inhaling and that of the orb of the sun which resembles blazing fire.

prāṇāyāma-2 प्राणायाम-२ (YCU 93-109; GS I 11, V 45, 48, 54-5, 57; DU VI 1, 2, 10; G 38, 41, 47, 54, 67; HP II 1, 6, 16, 37, 38, V 21), a whole process

consisting of inspiration, expiration and suspension of breath in different ways and different measures. G insists on slow inhalation and exhalation and warns the aspirant against a long suspension of breath. It is generally believed that the practice prānāyāma wards off all evils. Gheranda, however, attributes a feeling of lightness to this practice. According to GS and some other texts, the thumb and the little and ring fingers should be used for closing one or both nostrils as required. DU believes that the practice of prāṇāyāma² leads to Supreme Realization.

YCU advises the aspirant to assume the padmāsana³ pose for practising prānāvāma², which consists in first closing the right nostril and slowly inhaling through the left, then retaining the breath as long as one can with ease; and in the end exhaling slowly through the right nostril. The process is to be repeated by inhaling through the right nostril, and so on. The time generally prescribed for inhalation is sixteen mātrās¹, for cessation of breath sixtyfour mātrās1, and for exhalation thirtytwo mātrās1. According to YCU, three months practice ensures nādī**śuddhi.** Then the $yog\bar{i}$ becomes light, thin and bright and the heat inside him increases. Nearly all the writers on yoga4 consider prānāyāma to be a component of yoga4.

For G dhyāna seems to be an essential

part of **prāṇāyāma**². This text mentions only two types of respiratory **prāṇāyāma**-one in which inhalation is done with the left nostril and exhalation with the right nostril, and the other that in which inhalation is done through the right and exhalation through the left.

prāṇāyāma-3 प्राणायाम-३ (SAU I (6) 1; ANU 9-10), inhalation, exhalation, suspension of breath during the practice of yoga. Thus there are three kinds of prāṇāyāma; viz. recaka, pūraka¹ and kumbhaka¹.

SAU prescribed the contemplation upon the goddess **Gāyatrī**-who is said to be akāramūrti अकारमूर्ति during **recaka**, the contemplation upon the goddess **sāvitrī**-who is described as ukāramūrti उकारमूर्ति during **kumbhaka** and that of the goddess **sarasvatī**-who is mentioned as makāramūrti मकारमूर्ति during **pūraka**. This text equates **prānāyāma** with **omkāra**.

For ANU repetition of the **gāyatrīmantra**, along with **om**, the **vyāḥṛti** and *śiras* during each **prāṇāyāma** is an integral part of these practices.

prāṇāyāma-4 प्राणायाम-४ (TBU I 31), suspension of all the vṛṭṭis¹ and uninterrupted occupation with the realization, "I am brahman".

prāṇāyāma-5 সাণাবাদ-५ (G 53), raising the apāna mixing it with prāṇa and carrying the blend effortfully to the head removes all ills.

prāṇāyāma-6 प्राणायाम-६ (BG IV 29), cessation of prāṇa (prāṇagati) and of

apāna (apānagati) both simultaneously (see for details YM Vol. VI, NO. 1-'Prāṇāyāma in Bhagawadgītā by Swāmī Kuvalayānanda).

prāṇāyāma-7 प्राणायाम-७ (VS III 2-9, 13), the balanced union of prāṇa and apāna. It is divided into three states namely: pūraka, kumbhaka and recaka. VS further views these three states to be representatives of A, U and M respectively.

prāṇāyāma-8 प्राणायाम-८ (SSP II 35), the steadiness of vital air. SSP adds one more state viz. saṃghaṭaka besides pūraka, kumbhaka and recaka. Saṃghaṭaka has been described as the process of union of prāṇa and apāna. prātibha प्रातिभ (VB III 33, 35, 54), knowledge through intuition. It is called as tāraka which is prior to the discriminative knowledge.

prāntabhūmi-1 प्रान्तभृमि-१ (YS II 27), marginal. Prāntabhūmiprajñā is, therefore, implied insight. The implications of vivekakhyāti (Supreme Realization) are enumerated by VB as: (1) there remains no shadow of doubt; (2) avidyā is made perfectly inactive; (3) nature of **hāna** (disappearance) is seen in the state of samādhi¹; (4) it is clearly seen how vivekakhyāti can bring about hana (escape from duhkha); (5) there is no longer any urge for bhoga (enjoyment); (6) the illuminated citta¹ is advancing towards kaivalya; and (7) it is clearly seen that after kaivalya (liberation) the puruşa1 will be the light that it is and nothing else. This is the sevenfold knowledge implied in **vivekakhyāti**.

prāntabhūmi-2 प्रान्तभूमि-२ (VB III 6), higher level of perfection. According to VB, paracittajñāna (knowing another man's mind) is a lower gain of saṃyama then, e.g. bhūtajaya भूतजय, indriyajaya, sarvajñātṛtva and sarvabhāvādhiṣṭhātṛtva (conquest of matter and mind, omniscience and omnipotence). Success in saṃyama on upper levels is not possible without first mastering it on lower levels.

prāptikāraṇa प्राप्तिकारण (VB II 28), the cause of attainment, one of the ninefold causes. The practice of the means of yoga helps to attain discriminate-discernment, hence aṣṭāṇgayoga can be termed prāptikāraṇa.

prārabdhavipāka प्रारब्धविपाक (NGB II 14), result of previous birth. The person being liberated in life, still will have to enjoy the consequences of actions done in previous life.

prīti प्रीति (SK 12), tranquillity, peace of mind, which is one of the three aspects of the nature of guṇas¹, the other two aspects being aprīti (agitation) and viṣāda (sluggishness). It is obviously the nature of the guṇa¹ known as sattva² (cf. aprīti).

prekṣaka प्रेक्षक (SK 65), unconcerned spectator. According to SK, puruṣa¹ suffers the miseries of old age and the agony of death only so long as He is in saṃyoga with a linga¹. When this

saṃyoga is broken He is in no way connected with them. But even during the period of saṃyoga, puruṣa¹ does not change as the liṅga¹ with which He has a saṃyoga, changes. He remains quite aloof.

plāvinī प्लाविनी (HP II 44, 70), filling the lungs to capacity by literally sucking in air. So long a *yogī* remains in this condition it is easy and safe for him to float on very deep water like a lotus leaf.

pluta प्लुत (VU V 69, 70), lengthened recitation of a vowel; e.g. 'o' of om². the other two modes of reciting this mantra³ are with a hrasva or a dirgha 'o'. These differences only point to the relative length of expiration. They are not definite lengths of time like a second or a minute.

Pluta recitation of om is said to lead to mokṣa (liberation), while $d\bar{i}rgha$ recitations only make liberation attainable. Pluta recitation of om² also sends $v\bar{a}yu^1$ up to the brahmarandhra in the head. It is the longest of the three durations of the recitation of the 'o' sound in om².

Pha-फ

phala फल (YS II 14), fruit of action which may be either the experience of pleasure or that of pain.

The law of **karmaphala** is a supernatural law which determines the hedonistic tone of experience. According to this law, right actions are sooner or later followed by a pleasant experience and

unrighteous ones by a painful one. **Jāti**, **āyu** and **bhoga** are all **vipāka** of our **karmas. Hlāda** and **paritāpa** are their **phala**.

phūtkāra फूत्कार (ATU 5), an internal introspective sound resembling 'phoo' is generated while practising tārakayoga.

ba-ब

baddhapadmāsana बद्धपदासन (TSM 40), one of the principal āsanas¹. It consists in first adopting the muktapadmāsana pose and then holding the two toes with the opposite hands, taking the arms round the back. This is exactly how padmāsana is described by DU, HP and GS. TSM however, considers it to be a variation of padmāsana. DU, HP and GS also add the chin-lock and nāsāgradṛṣṭi² which TSM does not mention in connection with baddhapadmāsana.

baddhamudrā बद्धमुद्रा (BVU 68), assuming the mudrā. Here it refers to khecarī-mudrā.

baddhaśvāsa बद्धश्वास (GS III 47), choked. Due to the restriction of vāyu, kuṇḍalinī feels choked and rises up wards along the path of suṣumnā.

bandha-1 जन्ध-१ (YS III 1, 38; SK 44), fixation, binding. Patañjali's dhāraṇā consists in the mind being fixed on an object. The object to such concentrated consciousness may be a part of the body or an object in the world outside (cf. VB). The cause of our being bound to our bodies (bandha kāraṇa) is obviou-

sly the **kleśa** (inborn disposition) **abhiniveśa.** Only when this is considerably attenuated, one can be ready to go from one body to another.

bandha-2 बन्ध-२ (SK 62), the close relation of puruṣa¹ and prakṛti in saṃ-yoga is called bandha by *Īśvarakṛṣṇa* who considers prakṛti alone to be in bondage, not the puruṣa¹.

The meaning seems to be that which binds **prakṛti** and **puruṣa** is in **avidyā** which is in the **prākṛtika** part of **puruṣa²**. The roots of **saṃyoga** are thus in the **liṅga** and **puruṣa¹** is therefore, said to be always **mukta** (free).

bandha-3 অন্থ-২ (SS IV 8), adopting. Adopting yoni-mudrā has been praised by the sages. It has been described in the previous verses by SS.

bandha-4 অন্থ-४ (ABU 2), bondage as opposed to liberation. Manas² is here said to be the cause of both bandha and moksa.

bandha-5 बन्ध-५ (HP II 45, III 10, 21, 55-6, 69-71), jālandhara, uḍḍiyāna and mūlabandha. They are muscular locks.

In HP III 10 reference is to jālandharabandha which is said to awaken the kuṇḍalī. In the experience of some yogīs jālandharabandha is not helpful for performing mahābandha. They find the tongue lock (jihvābandha) to be more effective.

bandhatraya¹ जन्धत्रय-१ (HP I 42, 52; YKU I 40; YSU I 101-2; VU V 45), mūlabandha¹, uḍḍiyāna¹ bandha⁵ and

jālandharabandha together. In these works bandha⁵ signifies the muscular locking which diverts the movement of prāṇa² to suṣumnā. G (35-37) has also mentioned and described these three bandhas⁵. HP and GS have included uḍḍiyāna among the mudrās.

bandhatraya-2 অন্থার্য-২ (VBh I 24),
three-fold bondage. (1) Prākṛtika
bandha-resulting from the destruction
of prakṛti. It is the sense of 'I'- ness in
the eight prakṛtis i.e., mahat, ahaṅkāra, manas and the five tanmātrās.
(2) Vaikārika bandha of individuals,
arising out of attachment to the object
of senses. (3) Dakṣiṇābandha. In case
of house-holders who desire divine and
nondivine objects and are attached to
sacrifice, Vedic studies and so on.

bala-1 बल-१ (YS, VB III 23), strength.

Saṃyama on three types of feelings i.e., maitrī, karuṇā, and muditābestows the strength of friendliness, compassion and joy respectively from which arise powers of unfailing energy.

bala-2 बल-२ (YS, VB III 24), strength.

By practising saṃyama on the strength of different animals or birds or anything having power, one acquires the similar powers. By practising saṃyama on the strength of element of vainateya or vāyu, one acquires the similar powers.

bahirakalpitāvṛtti बहिरकल्पितावृत्ति (YS III 43), citta² spontaneously going to an object outside the body. *Patañjali* calls it mahāvidehā. Bahirakalpitāvṛtti of a citta² would therefore, be videhā. It

would be kalpita, i.e. deliberate, as opposed to the bahirakalpitāvṛttī, which is natural and spontaneous. Vrtti in this context means acquiring knowledge by dint of concentration. The idea is that at a certain stage of progress in $yoga^1$, a $yog\bar{i}$ acquires the ability of taking his citta² for concentration deliberately to an object out there. This siddhi is called videhā. At a still higher stage of progress, however, the $yog\bar{i}'s$ citta² goes out to comprehend distant objects naturally and spontaneously. When this stage is reached there is nothing in the world which can remain hidden from the yogi. As soon as he thinks of something, the thing stands out before him, as if he were perceiving it, without any effort of concentration. According to VB, however, bahirakalpitāvrtti is a position taken up by a citta¹ deliberately and spontaneously outside the body, leaving it like a dead thing.

bahiranga बहिरंग (YS III 8), of the nature of comparatively overt behaviour directed towards men, animals or things, or of the nature of mental activity with a comparatively more concrete content. Yama, niyama, āsana¹, prāṇāyāma² and pratyāhāra are bahiraṅgayoga¹ as compared to dhāraṇā, dhyāna and samādhi; and savitarkā, nirvitarkā, savicārā and nirvicārā samāpattis are bahiraṅga as compared to nirbījasamādhi.

The first five $yog\bar{a}\dot{n}gas$ are of the

nature of overt behaviour to some extent and the last three are primarily and essentially mental. But the gross or subtle objects of dhāraṇā, dhyāna and samādhi are concrete as compared to the content of nirbījasamādhi, viz. ānanda and asmitā.

bahirlakṣya बहिलंक्ष्य (ATU 6), one of the three objects towards which the mind is directed in tārakayoga. Bahirlakṣya is localised in space in front of the yogī at a distance of 3, 4½, 7½ or 9 inches from his nose. It appears that the distance increases by practice, as the word kramāt क्रमात् (by degrees) is used. A sky of two colours, which the yogīs see, is said to be a bahirlakṣya.

bahiskṛta बहिष्कृत (GS I 14, 25), one of the four kinds of antardhauti the latter part of which is called praksālana. Bahiskrtadhauti consists in filling the stomach with air by kākīmudrā, retaining it for one hour-keeping the direction of movement downward so that the air may not escape through the mouth and then standing in navel deep water and, washing the protruded rectum thoroughly, returning it to its place. The ability to retain water in the stomach for one hour is a pre-requisite for bahiskrta. Without this ability, obviously one cannot succeed in this dhauti.

bahumata बहुमत (BY XI 13), literally it means diversities of opinions, but here it means highly esteemed person. One who understands, recites and acts in conformity with the sacred texts is understood to be highly esteemed.

bādhā बाधा (HP V 23, 24), affliction due to faulty practice of yoga. The real yogi without being afraid of any such obstacles should go on increasing the practice of yoga and overcome the affliction through the practice of yoga itself.

bāhya बाह्य-१ (SK 33, 50), external. The five sense-organs and the five action organs are said to be bahya karanas as compared to the antahkarana; and the five tustis, which consist in detachment from the five kinds of objects of perception, are described as bahya tustis as compared to the four ādhyātmika (inner) tustis. They are all bāhya in so far as they have to do with external objects. The sense organs sense the objects from which detachment is to be cultivated and the action organs operate the organs of activity, viz. muscles, glands, etc. The sense and action organs as well as muscles etc. are all bāhya as compared to the transmigrating self (aindriya viśesa).

bāhya-2 बाह्य-२ (VS I 34), external. Yama, niyama, āsana and prāṇāyāma-these four are external aspects of yoga.

bāhya-3 बाह्य-३ (VS I 22), action prescribed by the *Veda* which require physical means such as body and material objects and which are performed with full knowledge, devotion and without expecting any rewards are said to be external actions helpful in the attainment of liberation.

bāhyarūpagrahaṇa बाह्यस्पग्रहण (ATU 10), seeing a light when the retina is stimulated by a ray of light falling on it from outside. Antararūpagrahaṇa (seeing a light which may appear by an internal stimulation) is visual anusandhāna². For both these experiences the instrumentality of manas² (mind) and cakṣu³ (eye) is needed. For the former, of course the use of the eyeball, including all its parts, is required in addition to the cakṣu³ indriya² which is not an anatomical structure.

bāhyaviṣaya बाह्यविषय (YS II 51), exhalation (cf. prāṇāyāma³).

bāhyavṛttiprāṇāyāma बाह्यवृत्तिप्राणायाम (YS II 50), prāṇāyāma³ (stopping of breath) after complete exhalation when the lungs are empty.

bāhyaśauca बाह्मशौच (SAUI14), external cleanliness. This is achieved through the aid of earth and water.

bāhyākāśa বারাকায় (VS IV 3), external ether or ether ouside the body. The concentration of external ether combined with internal ākāśa within one's heart is called dhāranā.

bindu-1 बिन्दु-१ (YSU I 167, 170, II 12, III 11, V 4, 28, 34, 47, VI 49, 70, 72, 73, 75; DBU 105), the internally aroused white light seen by the *yogī* between the eyebrows (cf. *Patañjali's jyotiṣmatī-pravṛtti* ज्योतिष्मतीप्रवृत्ति), **Bindu** and **nāda¹** (centrally aroused sound) combined constitute a significant symbol of **brahman.**

Bindu is said to arise from **mūlādhāra** (at the base of the spine) though it is

seen between the eyebrows. The meaning is that by stimulating the $m\bar{u}l\bar{a}$ - $dh\bar{a}ra$ the $yog\bar{i}$ succeeds in his yoga, raises $pr\bar{a}na$ upwards and sees a light in the head. This light is the **bindu**.

bindu-2 बिन्दु-२ (VU V 37), that which is raised by the yogis up to the head along the suṣumnā nāḍi. It is sometimes called prāṇa, sometimes a combination of prāṇa and apāna, sometimes apāna and sometimes vāyu. By stopping bindu anywhere on its way in the suṣumnā (spinal cord) heat is generated in the spinal marrow and the liquid of the cord is dried up. This gives strength to the body.

bindu-3 बिन्दु-३ (VU V 50) a form taken by śiva (brahman) himself. Mūlādhāra (at the base of the spine) is supposed to be the seat of bindurūpaśiva. According to DBU, the perfect yogī has to realize this bindu which is maheśvara Himself.

bindu-4 बिन्दु-४ (YCU 60), secretion from the spinal cord. Two such secretions are mentioned in connection with yoga-one from the upper part, may be that throat, and the other from the lower parts. The former is supposed to be white and the latter red.

bindu-5 बिन्दु-५ (HP III 42), secretion from the candra in the throat. In the context of vajrolimudrā, if this secretion escapes the bhānu in the chest and reaches the pelvic region, the yogis raise it up again by performing yonimudrā. bindujaya बिन्दुजय (HP II 78), control over the ejaculation of semen. It is one of the characteristics of success in **hatha**yoga.

bindunātha बिन्दुनाथ (HP I 7), name of one of the siddhas of haṭḥayoga.

bindumadhya बिन्दुमध्य (VU V 32), the spot inside the top of the head. According to this text, the successful yogi sees the divine light inside his chest or at the tip of his nose or inside, on top of his head.

VI 1, 12), the **dhyāna** बिन्दुमध्यध्यान (GS VI 1, 12), the **dhyāna** (meditation) of which the object has no sensory aspectneither the image of a God nor of a **guru**², nor the sensation of a light. When the **kuṇḍalinī** reaches above the level of the eyes, then according to *Gheraṇḍa*, no light is seen.

A **dhyāna** on that "nothing" so far as sensing goes, is **sūkṣma dhyāna** or **bindudhyāna** according to GS. But rising of **Kuṇḍalinī**¹ to the top of the head is not devoid of unique experience. It is a complete, rich experience.

bindurūpiṇi জিল্বুৰুঘিणী (YSU III 2), extremely subtle (=sūkṣma). The svādhāra form of the vākśakti (speech) in the mūlādhāra (at the base of the spine) is extremely subtle.

bindulakṣaṇa बिन्दुलक्षण (BY IX 9), bindu here refers to the flame, having the form of bindu. Atman has been described as having the form of bindu which is its gross manifestation.

bindusiddhi बिन्दुसिद्धि (GS III 47), success in retaining semen i.e., remaining celebate by practising $\mathbf{vajrol}\overline{\mathbf{i}}$ which is here said to yield fruit to the $yog\overline{\mathbf{i}}$ even if he is enjoying the many pleasures of life. The $\mathbf{vajrol}\overline{\mathbf{i}}$ mudr $\overline{\mathbf{a}}$ of GS is quite different from $\mathbf{vajrol}\overline{\mathbf{i}}$ as understood by other writers.

bindustambhana बिन्दुस्तम्भन (SSP II 13), control over ejaculation of semen. This is required in the practice of vajroli which consists in contraction of the penis and thereby piercing three knots viz., brahmā, viṣṇu and rudra and taking shelter at brahmaguphā (in the ājñācakra).

bila बिल (ATU 11; ANU 26), hollow, cavity. In tārakayoga light is seen inside the hollow between the two eyebrows. ANU mentions it as one of the spots in the body where yogīs place the object of their concentration and realization and calls it one of the entrances to the routes which lead to liberation and take one to brahman.

bileśaya बिलेशय (HP I 5), one of the great authorities of hathayoga.

bija-1 ৰীজ-१ (YS, VB I 46), vitarka and vicāra of samādhi. These are the two kinds of contents of sabijasamādhitwo types of viṣaya. Nirbijasamādhihas no such content. Ānanda and asmitā are not considered by Patañjalito be visayas.

bija-2 बीज-२ (YS, I 25; VB II 4, 11, 23, III 55), potentiality, root cause, possibility of sprouting forth. Bija² of a mental disposition is its ability to result in mental activity. When that is

burnt the disposition becomes completely ineffective.

bija-3 बीज-३ (G 70; GS III 61, 63, V 36, 39, 47, 52, 54, VI 10), a single syllabled mantra² or a mystical letter forming a mantra² or an essential part of a mantra².

buddha बुद्ध (HP I 6), name of the great siddha of hathayoga.

buddhi-1 बुद्धि-१ (YS IV 22; VB I 36, II 6, 24, 25, 27, III 35), citta¹ which is guṇātmaka. In II 6 Vyāsa equates it with darśanaśakti as opposed to dṛkśakti which is puruṣa¹. By using the expression buddhisaṃvit for knowledge gained by citta², VB equates buddhi¹ with citta² in I 36.

buddhi-2 बुद्धि-२ (YS IV 21; VB I 11, 36, II 20, III 17, 52, IV 21-2), process of consciousness, as opposed to object of consciousness (grahaṇa as opposed to grāhya). If another process of consciousness is required for introspecting a process of consciousness, then there will be no end to such processes of consciousness and there will be an infinite regress, which is a logical fallacy.

By virtue of retentivity in $citta^1$, every mental activity leaves behind an aftereffect which tends to give rise to a similar mental process, as well as, to call up an image of the object of the previous mental process. This way of the working of the mind was seen clearly by $Vy\bar{a}sa$.

182-3, 5), deciding, selecting, determining. This is how *Īśvarakṛṣṇa* explains buddhi3. But he calls buddhi3 an antahkarana and holds that the bhāvas² are in buddhi; and bhāvas², according to him, inhere in linga1 and go with it as it transmigrates. All this makes a neat consistent theory. Linga1 contains buddhi which is one of the karanas² of which the linga¹ is made up. Thus mahat and buddhi3 are not identical. Buddhi is the mahat element in linga1, and as an antahkarana, its function is also called buddhi3. Buddhi³ has thus a functional as well as a structural side. BY refers to buddhi as one of the antahkaranas and enjoins the contemplation of the indrivas and their psychological objects in buddhi and of the three antahkaranas and the bhūtas in prakṛti (pradhāna). buddhi-4 बुद्धि-४ (VB I 35), abiding dispositions generated by experience, including learning in different ways. Drdha

buddhi-3 बुद्धि-३ (SK 23, 35-7, 49; BY IX

generated. **buddhi-5 बुद्धि-५** (BG II 39), discriminate discernment.

दृढ़ buddhi4 is a firm conviction so

buddhi-6 बुद्धि-६ (BG II 53, 65), intellect. buddhi-7 बुद्धि-७ (BG II 41, 66), determinate knowledge. The determinate knowledge belongs to a steady-minded person.

buddhi-8 बुद्धि-८ (BG III 40, 42, VII 4), the intellect is said to be seat of the soul in the body. It is superior to mind and senses. It is one of the evolutes of **prakṛti.**

buddhi-9 बुद्धি-९ (BG VII 10), the Lord himself (identified as intelligence of the intellect).

buddhi-10 बुद्धि-२० (SSP I 45), it is one of the five internal sense organs having discrimination, non-attachment, peace, contentment and forgiveness as its characteristics.

buddhinirmala बुद्धिनर्मल (KU 11), so subtle as to be cognised only by an untainted intellect. According to this text, the vital core of joints is something which can neither be perceived nor understood by people of ordinary intelligence.

buddhisamvit बुद्धिसंवित् (VBh I 36), consciousness of intellect. While concentrating on the heart lotus, there arises the consciousness of intellect.

buddhisattva बुद्धिसत्त्व (VB, VBh I 36), dominance of sattva in intelligence. It is supposed to be luminous and all pervading due to dominance of sattva. According to VBh, Patañjali has established here the all pervasiveness of mind.

buddhindriya बुद्धीन्द्रिय (SK 26, 34) sense organ (cf. indriya and karaṇa). There are five senses in all śrotra, tvak, cakṣu, rasanā and ghrāṇa,- auditory, cutaneous, visual, olfactory and gustatory sense, respectively. We use them for sensing and manas and the senses together for perceiving.

baindavasthāna बैन्दवस्थान (YKU III 8),

235

middle of the eyebrows, which is here supposed to be the seat of \mathbf{bindu}^2 . The $yog\overline{i}$ is advised to make the $\mathbf{v}\overline{\mathbf{a}}\mathbf{y}\mathbf{u}$ which is rising up along his spinal cord rest finally at this spot, presumably inside just below the spot between the eyebrows.

bodhaka बोधक (BVU 51), one of the three kinds of ācārya (guru²). This kind of guru² is a real teacher and not only one who prompts, i.e. a codaka.

brahma ब्रह्म (BY II 115, 125), one of the ten synonyms for oṃkāra. Om is described as the source of three varieties of brahma.

brahmakāyika ब्रह्मकायिक (VB III 26), one of the four classes of Gods residing in the first world of brahma called janoloka. These gods have control over the elements and senses.

brahmagranthi ब्रह्मग्रन्थ (VU V 65; YKU I 67, 85; BVU 70; HP I 70), one of the three hurdles (called knots) in its way to be crossed by the vāyu rising up along the spinal cord. This is the first and the lowest hurdle. In YKU kuṇḍalinī is said to overcome this obstacle, i.e. pierce this knot.

According to HP, this obstruction is felt at the level of the heart. The rising **prāṇa** of the *yogī* who has attained the **ārambha avasthā** pierces this knot.

brahmacakra রুর্ঘের (SSP II 1), the cakra situated in the ādhārasthāna (perineum). According to SSP, this is first in the series of nine cakras in the body. This is supposes to be having

three circles, triangular like **yoni** and also supposed to be the originating point of **nāḍī**.

brahmacarya-1 ब्रह्मचर्य-१ (YS II 30, 38; SAU I (1) 4; YSH II 104-5; BY II 37, 104), continence-one of the five yamas (abstinences). The perfectly continent yogī alone can acquire the energy required for yoga effort.

According to SAU, it is perfect continence, in mind word and deed; i.e. a **brahmacārī** (a continent person) neither thinks of, nor talks about, nor indulges in, sexual acts in any form. In YSH it is described as the one of causes of **mokṣa**, long life, health, strength influence and courage (IV 104-5). Much is written here against the female sex, but an honest married life is also mentioned as a kind of **brahmacarya**; though sex activity itself is condemned, particularly because it brings about a birth in this world which is full of misery.

According to BY, those who are desirous of becoming one with **brahman** observe **brahmacarya**.

brahmacarya-2 ब्रह्मचर्य-२ (BG VIII 11, XVII 14), celibacy. One of the austerities.

brahmacarya-3 ब्रह्मचर्य-३ (VS I 38, 43-45), celibacy. One of the ten yamas enumerated by Vasiṣṭha. Abandoning sexual intercourse always and everywhere amongst all beings physically, mentally and verbally. Vasiṣṭha further gives a detailed description of Brahmacarya to be followed by the people of different life stages (āśrama). For house-holders Vasiṣṭha prescribes a lawful intercourse with one's own wife. For a disciple, submitting oneself at the discipline of his Guru is also called brahmacarya.

brahmacāri ब्रह्मचारी (SSP VI 34), one who possesses the knowledge of all pervading brahma within oneself.

brahmadvāra-1 ब्रह्मदार-१ (YCU 37), the door leading to brahma. The great goddess kuṇḍalinī sleeps closing this very door.

brahmadvāra-2 ब्रह्महार-२ (G 30; HP III 5), entrance to the brahmarandhra. Kuṇḍalī is situated, in such a manner that so long as it is not aroused, extraordinary sensory currents passing upwards along the suṣumnā (in the spinal cord) do not find their way up. The sleeping kuṇḍalī blocks the passage of prāṇa² to brahmarandhra in the head. Brahmadvāramukha is thus the lower opening of the suṣumnā.

brahman ब्रह्मन् (GS III 41, 67, VI 1, 16, VII 4, 13, 19; TSB 3; TSM 151, 161-2; ANU 1, 2, 20; ATU 2-3, 10, 17), the one and the only Supreme Reality, beyond which there is nothing. While seeing an internally aroused light if a yogī contemplates brahman, he becomes brahman himself, i.e. realizes his own self.

Brahmalokānveṣi ब्रह्मलोकान्वेषी (seeker of the abode of **brahma**) is therefore, the

person who seeks to realise the true self. **Brahman** and **ātman**² are generally used as synonyms. Becoming one with **brahman** is considered by the monistic *Vedāntists* to be the realisation of the true self and the only summum bonum.

brahmanādī-1 ब्रह्मनाडी-१ (HP II 46, 66, III 68; YSU I 125, V 17, VI 8, 9; TSM 69; ATU 5), susumnā. Prāņa² rises up along this $n\bar{a}d\bar{i}^2$ and, according to YSU, carries along with it the six dhātus of the body as well as vahni and citta1 and all. Although sususmnā is generally supposed to be the spinal cord, it is said to extend from the region of the anus to the top of the head. Inside the susumnā is the passage for the subtle (imperceptible) kundalini to travel upwards. That passage, which also extends upto the top of the head, is in all probability referred to as brahmanādī.

Accumulation of **kapha** etc. anywhere may obstruct the path of $\mathbf{pr\bar{a}na}^2$ in this $\mathbf{n\bar{a}d\bar{i}}$; but if it is a nervous structure **kapha** cannot literally stick to its mouth, as is said in HP II 66.

brahmanāḍi-2 ब्रह्मनाडी-२ (VM I 36), name of the nāḍi (that leads to brahman). In the pericarp of the lotus of the heart the brahmanāḍi is situated with upturned face and reaching to the circle of the sun (which is the middle of lotus of the heart).

brahmapurohita ब्रह्मपुरोहित (VB III 26), one of the four of Gods living in the

first of the worlds of **brahma** i.e. **janoloka.** These Gods have control over the elements and sense-organs.

brahmamahākāyika ब्रह्ममहाकायिक (VB III 26), one of the four classes of Gods living in the first of the world of brahma. These Gods have control over the elements of the world.

brahmarandhra-1 ब्रह्मरन्ध्र-१ (G 73; ATU 5; VU V 70; TSM 64, 151; HP IV 16), a point in the brain to which the nerves go in the end. Whether it is the central point on top of the brain, the upper part of the motor area in the parietal lobe near the central sulcus, or it is the midpoint of the thalamus, cannot be said. Susumnā (in the spinal cord) is said to reach the brahmarandhra and yogis are advised to retain prana2 there. Brahmarandhra is the highest dhyānasthāna (spot for concentration) on top of the brain. Susumnā runs from this spot down to the spot where the kundalini sleeps. The lower end of the susumnā is probably referred to as the brahmarandhramukha (mouth of brahmarandhra). It appears that the words brahmabila ब्रह्मबिल brahmavivara ब्रह्मविवर and brahmarandhra are used as synonyms.

According to VU, **vāyu** is led to this spot by **pluta** (long) recitation of **om**. Sending up **vāyu** to this spot is, according to DU, an important *yogakriyā* योगक्रिया (yogic practice). When **vāyu** reaches this spot, internally aroused

sounds are heard by the *yogīs*. These are sensations of sound which are not caused by any external stimulus.

brahmarandhra-2 ब्रह्मर-ध-२ (VU V 30; HP III 4), the passage along the suṣumnā or inside the suṣumnā, the lower end of which is blocked by kuṇḍalinī. HP considers brahmarandhra to be a synonym for suṣumnā.

brahmarandhramukha ब्रह्मरन्थ्रमुख (VS II, 17, 26), the orifice of the door-step of brahmarandhra. The suṣumnā resides in it and is the means to attain liberation.

brahmarupiṇi ब्रह्मरूपिणी (KU 16), suṣumnā. It leads to the attainment of the world of brahma.

brahmaloka ब्रह्मलोक (VB III 26), fifth loka in the series of seven lokas enumerated by $Vy\bar{a}sa$.

brahmavit ब्रह्मवित् (VS V 19), conversant with brahman. According to *Vasisṭha*, there is nothing in the world which is superior to the one conversant with brahman.

brahmasthāna ब्रह्मस्थान (DBU 65; HP III 102), brahmarandhra.

brahmā-1 ब्रह्म-१ (SK 54; G 38; YCU 72; HP II 39), the supreme living being at the top of the rajoviśāla रजोविशाल bhautikasarga; its bottom being stamba स्तम्ब (a blade of grass). Thus the God brahmā is at the top of the creation and a blade of grass at the bottom. For G brahmā is a mythological personality, whose function is creation of the world. As the myth goes, brahmā also practises prāṇāyāma² for fear of death. The significance of the myth is that prāṇāyāma² is essential for those who want to live long and do an important job. YCU regards brahmā to be the lord of pṛthivī. Brahmā is called rajas because He is said to be the creator.

brahmā-2 ब्रह्मा-२ (BY IX 83), name of the God. Owing to the qualities of vastness and nourishment and carrying the three Vedas, he is called brahmā. brahmāṇḍa ब्रह्माण्ड (ATU 9), the macrocosm-the universe which contains the sun and the moon. As compared to the brahmāṇḍa, the human body is a microcosm-piṇḍa (human body) in which also there are supposed to be the sun and the moon. They are in the head. Whether there are any anatomical structures which can be identified with the sun and the moon mentioned here is not yet known.

brahmānanda ज्ञाह्मानन्द (HP IV 2), supreme bliss, which is supposed to be bestowed upon the *yogī* who succeeds in samādhi.

brāhmī ब्राह्मी (NBU 11, 16), the twelfth mātrā of the dvādaśamātrā (composed of 12 parts) praṇava (om). The mantra-yogī who dies reciting this mātrā is reborn in the brahmaloka, from which there is no return.

bha-भ

bhaktiyoga भक्तियोग (GS VII 6, 14), devo-

tion to God. It is the means of bringing about one of the five aspects of rājayoga. By bhaktiyoga one acquires an ever-living consciousness of one's iṣṭadevatā (tutelary deity) residing in one's heart (i.e. within oneself) and gets full of happiness (bills) so that the yogī forget himself, sheds tears and gets gooseflesh. This leads to samādhi and manonmanī.

bhaga भग (BY IX 91), prosperity. The epithet of sun. **Bhaga** is the term used for wealth (dhana). Since sun gives wealth he is named **bhaga**.

bhadra भद्र (VU V16; GS II 3; HP I 34), one of the principal **āsanas** (poses) (cf. bhadr**āsana** below).

bhadrāsana-1 भद्रासन-१ (GS II 9-10; HP I 53-4; SAU I (3) 8; DU III I, 7; ANU 18), one of the principal āsanas (poses). It consists, according to GS, in placing the heels crosswise under the testes, crossing the arms (behind the back) and grasping the big toes, adopting the chinlock (jālandhara) and fixing the gaze on the tip of the nose. It is claimed by GS that the practice of this āsana keeps one away from every kind of diseases.

SAU and DU omit crossing of arms behind the back, instead, DU advises fixing the two heels on either side of the perineum and keeping them there by force using the two hands. ANU includes this **āsana** among the four principal ones. He recommends this pose for **agnidhāraṇā**.

bhadrāsana-2 भद्रासन-२ (VSI67, 79; VM II 46) one of the ten important āsanas enumerated by Vasiṣṭha. Its technique consists in keeping the two ankles under the scrotum on either side of the perineum correspondingly, firmly holding with the hands the feet so as to touch the sides, one should remain steady. This removes diseases and effects of poison. Vācaspati gives its technique as bringing the soles together and close to the scrotum, one should make a hollow of one's hands and place them over it in the shape of tortoise.

bharga भर्ग (BY IX 46), According to BY, 'bha' means that which illuminates the universe, 'ra' stands for the rejoice and 'ga' for abundance.

bhavapratyaya भवप्रत्यय (YS, VBh I 19), caused by birth. One of the two kinds of asamprajñāta samādhi. The other being upāyapratyaya. Bhavapratyaya belongs to the videhas (without bodies: gods). Their asamprajñāta yoga is obtained without the practices of any means.

bhastrikākumbhaka भस्त्रिकाकुम्भक = bhastrā भस्त्रा (GS V 70-2; HP II 44, 67, III 111, 118; YSU I 88, 96-100), one of the sahita kumbhakas. According to GS, it consists in filling the chest to capacity by inhaling through the nostrils and emptying it by pressing the abdomen in the manner an iron-smith inflates his bellows and empties it, and after repeating the process twenty

times, suspending respiration for a while. The whole operation is repeated thrice.

YSU recommends the last inhalation and the last exhalation to be of one by contracting the throat a little and exhalation through the left nostril alone. This **kumbhaka** is said to cure all disease of the body caused by the excess of any of the three humours-vāta, **pitta** or **kapha**-and to increase the digestive heat. It aids in the arousal of **kuṇḍalinī** and removes the diseases of the mouth as well.

According to YSU, it clears the entrance to the **brahmanā**d**i** (in the spinal cord).

According to HP, for practising **bhastrikākumbhaka**¹, first we have to adopt the **padmāsana** pose, then holding the body erect, we have to exhale effortfully through both nostrils producing a hissing sound and causing a cutaneous sensation to be felt in the back, the throat and the top of the head below the skull, and then to inhale quickly automatically. This process is to be repeated several times. We are required to move the air diligently in the manner the blacksmith works his bellows.

As fatigue is felt, we inhale deeply but quickly through the right nostril and, after retaining as prescribed, exhale through the left nostril.

bhāgya भाग्य = bhāgyatuṣṭi भाग्यतुष्टि (SK

50), one of the four **ādhyātmika** (pertaining to the self) contentments. A person who is content with his **bhāgya** (fate) loses the impulse to go further in the right direction.

bhānu भानु (G 59; HP III 78, 112), nābhi in which sūrya is situated. Hence these three words are in a sense synonymous.

bhānuki भानुकी (HPI8), one of the great haṭhayogis.

bhālabhāti भालभाति (GS I 54), kapālabhāti.

bhālarandhra भालारन्ध्र (GS I 33), kapālavaktra.

bhāva-1 भाव-१ (VB IV 12), being in existence. The past and the future do not exist though they really are. They are not actual (cf. adhvabheda), nevertheless they are real.

bhāva-2 भाव-२ (SK 40, 43, 52), the dispositions which characterise an individual liṅga (transmigrating soul). The liṅga of every individual puruṣa is haunted by its bhāvas, which form an abiding attitude of the mind. They may be acquired and yet cling to the liṅga during the course of lives. The bhāvas are here said to be eight in number, viz. dharma (merit), adharma (sin), jñāna (knowledge), ajñāna (ignorance) vairāgya (detachment), avairāgya (attachment), aiśvarya (competence) and anaiśvarya (incompetence).

bhāva-3 भाव-३ (TBU I 14, 31 42), idea (thought). The ideas of lobha (greed), moha (attachment), bhaya (fear) etc.

are absolutely foreign to the person who has realized the **brahman**. The $yog\bar{i}$ is advised to have **brahmabhāvanā** (thought) as the permanent background of his consciousness.

bhāvanā-1 भावना-१ (YS I 28, II 33-4), reminding oneself, calling to memory. In I 28 reference is to God for whom stands the sacred word om.

While one recites this **mantra** (sacred aphorism), one brings to one's mind its meaning, i.e. God (see **pratipakṣa-bhāvana**).

bhāvanā-2 भावना-२ (YS I 33, IV 25), attitude of mind, sentiment. Maitrī (friendship) etc. are such sentiments advised to be developed towards those who are seen enjoying happiness. The attitude of curiosity about one's own past and future disappears after attaining vivekakhyāti.

bhāvanā-3 भावना-३ (VB, VBh I 33, III 23), cultivating sentiments. Friendliness, compassion and joy are the three sentiments. Vyāsa further says that by cultivation of these sentiments, there arises samādhi which is further equated with saṃyama. Vijñānabhikṣu understands that bhāvanā itself is samādhi.

bhāvitasmartavya भावितस्मर्तव्य (VB I 11), an imagined object taken to be real, a hallucination, e.g. a dream.

It is one of the two kinds of memory images mentioned by VB, the other being **abhāvitasmartavya** which is a memory image, taken as such.

bhukti भुक्ति (VS V 8), the enjoyment. Also known as **kṣetrjña** enjoying favourable and unfavourable fruits.

bhujagi-1 भुजगी-१ = bhujangini भुजंगिनी (GS II 43; HP III 10), kundalini.

bhujagī-2 भुजगी-२ (GS III 69), one of the mudrās. It consists in protruding the lips and inhaling through the mouth. *Gheraṇḍa* is all praise for it.

bhujaṅgāsana भुजंगासन (GS II 43), serpent or cobra posture. It is desirable to arouse the kuṇḍalinī force, increase body heat and destroy all diseases.

bhuvarloka भुवलांक (NBU 3), one of the six higher regions of creation above the earth (cf. janoloka). It is imagined as the knees of the haṃsa (swan) which represents the virāṭrūpa (all pervading aspect) of the supreme Reality.

bhuvodhāraṇā भुवोधारणा = stambhanī स्तम्भनी = adhodhāraṇā अधोधारणा (G 69, 74; GS III 59), one of the five dhāraṇās. The object of this dhāraṇā is pṛthvī; i.e. the content of consciousness in this kind of meditation is the element earth.

bhūta-1 भूत-१ (YS II 18; III 13, 17, 44), the material side of the universe including the material objects, the five elements, and the five tanmātrās (the matter of which the elements are the forms). The tanmātrās take the form of ākāśa etc. and the material aspect of mahat takes the form of the five tanmātrās. All these come under bhūta¹, as do the material objects.

bhūta-2 भूत-२ (VB I 25, II 15), living beings.

bhūta-3 भूत-३ (VB III 52), the past.

bhūta-4 भूत-४ (VB II 19; G 68, 74; TSB 4; TSM 2, 4, 6, 133, 140; SK 22, 38), the five elements usually called: ether, air, fire, water, and earth. According to TSM, the entire universe, even the indriyas² (sensory and action organs) and the cittas (the transmigrating souls) originate from these five bhūtas-ākāśa, vāyu, agni, ap and pṛthivī.

bhūta-5 भूत-५ (SK 69; ABU 22), everything that exists. The philosophy embodied in SK discusses the origin, maintenance and destruction of everything that exists.

According to ABU, everything is in **brahman**, who is in everything. The **Sāṅkhya** Kārikā view is different. It is dualistic. According to this view, in addition to the **puruṣa**, **prakṛti** also exists in its own right. **Bhūtas**⁵ are **prākṛtika** (of the nature of **prakṛti**) reality.

bhūtadhāraṇa भूतधारण (VU V 6), not allowing any of the five mahābhūtas (elements), of which the body is made up, to wane; i.e. keeping them strong and active so that the body may live. If the earth element wanes, wrinkles appear on the face. When water wastes away, hair turns grey. When fire loses its potency, appetite is lost. When air loses strength, body begins to tremble. When ether gets weak, life itself wanes.

bhūtātmā-1 भूतात्मा-१ (ABU 12), ātmā¹ which is the essence and substratum of everything (cf. bhūta).

bhūtātmā-2 भूतात्मा-२ (VS V 5), soul residing in individuals. According to Vasiṣṭha, one soul is established in different creatures and that very one soul seems sometimes one and sometimes many like the moon's reflection in water.

bhūtādi भूतादि (SK 25), one of the two aspects of ahaṅkāra, the other being vaikṛta वैकृत. Vaikṛtāhaṅkāra वैकृताहंकार and bhūtādi are the two names given respectively to that aspect of ahaṅkāra in which sattva² predominates and to that in which tamas² predominates. Bhūtādi is the material side and vaikṛtāhaṅkāra-the immaterial side of guṇātmaka (of the nature of guṇas) reality.

bhūmi-1 भूमि-१ (VB II 19), the earth element pṛthvi.

bhūmi-2 भूमि-२ (VB III 45; ANU 17), ground. For practising dhyāna, etc. ANU advises the *yogī* to sit either on bare ground or on a seat made of grass, provided they are perfectly clean.

bhūmi-3 भूमि-३ = bhūmikā भूमिका (YS III 6; VB I 30; VU IV (1) 1-12 (2) 1, 6, 8-12, 16, V 72, 74-5), a stage in the progress of yoga. According to VU, the stages in the development of yoga form a continuum as the sounds represented by the three and a half letters of the word om do. They merge one into

another imperceptibly and form practically one syllable. In the same way the various stages of yoga are not entirely separate from one another. They make up one yoga. Four bhūmikās of yoga are mentioned in VU ārambha, ghaṭa, paricaya and niṣpatti.

bhūmi-4 খুদি-४ (SSP I 38), earth, one of the component elements of the physical body. It has five characteristics-bone, flesh, skin, nerves and pores.

above the ground. It is said to be the last stage of lāghava (lightness), which is one of the seven disciplines achieved by prāṇāyāma². The practice of uttama (advanced) prāṇāyāma² is said to bring this ability to the yogī. It is in fact a feeling of absolute weightlessness.

bhūrādayaḥ भूरादयः (YKU III 22), the fourteen divisions of the universe-earth, six above the earth (bhūh भूः), and seven below. When the yogī realises the Supreme Self, these lokas all disappear for him. They do not exist for him any longer, because he gets none of his purposes served by them (cf. YS II 22). In Patañjali's language a yogī at this stage does not entertain any pariṇāmas.

bhūrloka भूलोंक (NBU 3; VB III 26), first of the seven bhuvanas mentioned by VB. It extends from the lowest region called *avici* अवीचि to the sky above the earth and includes seven pātālas and the earth. According to NBU, it is one of

the seven higher regions of creation (cf. janoloka). It is imagined as the feet of the haṃsa (swan), which represents the virāṭ (all pervading) rūpa of the one Reality.

bhṛṅganāda भृंगनाद (GS VII 9; HP II 68), bhrāmarīnāda-the sound like that of a black bee or a hollow top going round and round. According to GS, it is one of the many sounds which a yogī hears when he succeeds in bhrāmarīkumbhaka.

bheda-1 भेद-१ (SK 15, 46-8; TSB 4), a thing different from others. Things of the same kind which are in some way different from one another are the various limited modifications of one and the same undifferentiated substance; and since all the various finite things of the world differ from one another, there must be a common mother-substance of which they are all modifications i.e., there must be an unlimited and ultimate primeval entity which is not manifest.

bheda-2 भेद-२ (SK 68; TSM 129), separation, SK refers to the separation of the soul from the body and TSM to the points of separation in the body, probably the joints.

bheda-3 भेद-३ (SK 27), difference. Mutual difference among the eleven senses is external. Their essence is one, viz., vaikṛtāhaṅkāra. According to SK, puruṣa gets emancipation of both orders having nothing to do with

prakṛti while living (a life ordinarily known as **jīvanmukti**) and absolute and permanent freedom from every kind of connection with **prakṛti**-only when the body falls.

bhedavādī भेदवादी (SSP VI 56), discriminator. One who realises with profound discrimination about the ultimate, and all-pervading principle.

bhairavayogi भैरवयोगी (HP I 6), one of the important *yogis* of hathayoga.

bhoktā-1 भोका-१ (VB I 24, II 18), enjoyer. Patañjali has described puruṣa as draṣṭā (seer) and not as bhoktā. Īśvarakṛṣṇa, however, believes that puruṣa is the bhoktā of the miseries of old age and agony of death and the prakṛti (nature) works for bringing him apavarga. VB has said in II 18 that bhoga and apavarga are by buddhi and in buddhi. But they are attributed to puruṣa.

bhoktā-2 भोका-२ (VS V 8), the enjoyer.

One of the five substances recognised by Vasiṣṭha. The other four are bhogya, bhukti, bhogāyatana and indriya.

bhoktṛbhāva भोकृभाव (SK 7), feeling pleasure and pain. All of us are affected by this hedonic tone of our experiences; and this is put forward by *Īśvarakṛṣṇa* as a proof of the existence of puruṣas.

bhoga-1 भोग-१ (YS II 13, 18, III 35). Patañjali's definition of bhoga is similar to that of his kleśa asmitā which springs from avidyā. Any experience so long as the kleśa asmitā is not laid to sleep is bhoga ultimately due to avidyā. So long as asmitā is functioning the attitude of citta is that of bhoga. When asmitā becomes inactive it becomes apavarga. In that state the citta has realised that there is puruṣa and that 'I am not that'. Patañjali does not attribute bhoga and aparvarga to puruṣa in any sense. Nor does he seem to believe that the purpose of saṃyoga is bhoga and apavarga of puruṣa.

bhoga-2 भोग-२ (VB II 13), a kind of experience as a result of karmāśaya.

bhogalālasā भोगलालसा (TBU I 40), desire to enjoy. This is one of nine vighnas (impediments) in the way of samādhi. It corresponds to *Patañjali's* avirati.

bhogāyatana भोगायतन (VS V 7-8), body, the place of enjoyment. One of the five substances recognised by *Vasiṣṭha*. Body has been conceived to be the place of enjoyment.

bhogya भोग्य (VS V 8), object of enjoyment. One of the five substances recognised by VS.

bhautikasarga भौतिकसर्ग (SK 53), various types of life made available by pradhāna for puruṣas² to live. In SK 54 they are described as brahmādistambaparyanta ब्रह्मादिस्तम्बपर्यन्त (from brahmā down to a blade of grass). Of these there are eight varieties of superhuman life, five of animal and plant life and only one kind of human life.

Sattva is said to predominate in lives

at the upper end of this scale. In Kārikā 44 **dharma** is given as the means of rising in the lives. Practising **dharma** leads to a superior order of life which is preponderantly **sāttvika**; but according to SK, it is kevalajñāna that leads the aspirant to **apavarga** and not **dharma**.

bhauma भोम (GS III 59), consisting of the element earth, which is one of the five tattvas³ (elements) on which prāṇadhāraṇā is prescribed. This tattva³ is described as quadrilateral in shape and decorated with geological regions rich in yellow orpiment. Such should not be the description of a mahābhūta (element). This image is prescribed for purposes of dhāraṇā (concentration). This does not of course mean that the prthivī mahābhūta is actually such as described above.

bhramarasṛṣṭi भ्रमरसृष्टि (YSU VI 19), internally aroused sounds of the nature of *Patañjali's* viṣayavatī pravṛṭṭi. If a yogī begins to hear these sounds, he should concentrate on the sound which he hears, driving away all the worldly thoughts.

bhrāntidarśana भ्रान्तिदर्शन (YS I 30), a delusion either about the nature of reality etc. (i.e. a wrong philosophy) or more often, about one's own achievements. It is one of the nine **antarāyas** (impediments in the path of **yoga**).

bhrāmaṇi भ्रामणी (G 74), one of the five dhāraṇās is performed on air element. bhrāmari भ्रामरी (HP II 44; GS V 46, VII 5), HP describes bhrāmari kumbhaka as accompanied bhṛṅganāda and bhṛṅgināda भृंगीनाद (sound of a female bee) during pūraka and recaka respectively.

According to GS, bhrāmarī (kumbhaka) is inhalation and suspension of breathing after closing the ears with hands at midnight at a place where no other sounds are heard. In this condition the $yog\bar{i}$ listens by his right ear to an internally aroused sound; and by daily intermittent practice he succeeds in hearing various such sounds. With this sound blends an internally aroused light and the $vog\bar{i}$ is advised to get absorbed in that light so that his mind disappears in the end with the light and the sound and all. Thus the yogi gets lost and reaches the highest stage of voga often called paramapada (highest abode) of visnu. Thus, success in bhrāmarī kumbhaka (as it is called) leads to success in samādhi. According to Gheranda, no recaka follows this kumbhaka; that is, recaka is not an integral or essential part of this prānāyāma, as it is not of murccha or kevala**kumbhakas**. It is one of the eight types of kumbhaka² according to GS as well

as HP. In VII 10 GS brings in bhṛṅganāda during recaka also and considers samāpatti in it to be samādhi. Most probably this whole, of which bhrāmarīkumbhaka is a part and which Gheraṇḍa calls just bhrāmarī in VII 5, is one of his mudrās.

bhruvormadhya-1 श्रुवोर्मध्य-१ (BG VIII 10), middle of the eyebrows. Traditionally it is believed to be the meeting point of iḍā, piṅgalā and suṣumnā where prāṇa is fixed after raising it through susumnā.

bhruvormadhya-2 भ्रुवोर्मध्य-२ (VS III 64, 72), middle of the eyebrows considered as one of the eighteen vital points.

bhrūcakra খুবরু (SSP II 7), seventh cakras popularly called ājñā cakra in the series of nine cakras. It is said to be the seat of intuitive knowledge and bestows the power of speech.

bhrūdahara भूदहर (ATU 2), subtle point in between the eyebrows, also recognised as abode of saccidānanda.

bhrūmadhya খুমংঘ = (bhrūrantara খুংলাং) (G 8, 34, 84, 86; GS II 23), one of the nine dhyānasthānas (spots in the body on which the yogīs concentrate). It is the spot inside the point above the nose between the two eyebrows. Bhrūmadhyadṛṣṭi is prescribed as a part of khecarī. Bhrūmadhyadṛṣṭi is prescribed as a part of matsyendrāsana by GS and of siddhāsana by G.

ma-म

makarāsana मकरासन (GS II 6, 40), one of the thirtytwo āsanas mentioned by *Gheraṇḍa*. It consists in lying on the ground with face downwards, the chest touching the ground, the two legs stretched apart fully and the head held by the two hands. This āsana promotes digestion.

makāra-1 मकार-१ (GS V 51), the letter "ma म", which is the bijamantra (the most important letter) of the sacred word or aphorism denoting maheśvara and is to be repeated thirtytwo times while exhaling during the performance of the sagarbha sahita kumbhaka.

makāra-2 मकार-२ (ANU 4), the nasal sound of "ma म",. But, for sūkṣma dhyāna, the yogī is advised to take resort to the asvara makāra, which obviously is no sound at all. This is the aksarabrahma.

maṇayaḥ मणचः (YSU I 118), the vertebrae through which suṣumnā passes. Suṣumnā is, therefore, the spinal cord for something running in or along with it; and obviously the prāṇa³ which courses through it is a nervous impulse. The ancient Hindus' knowledge of anatomy seems to be quite deep in this subject.

maṇipūra मिणपूर (YKU III 9, 11), one of the six cakras-literally wheels-but here centres in the body. When prāṇa² is sent up a long the suṣumnā (the spinal cord), as they say, it traverses all the

cakras. The yogī is supposed to take this prāṇa² through the cakras consciously and intentionally-probably performing dhyāna (concentrating) on each of them and thus knowing all about them as he goes from one cakra to another. Maṇipūra is situated in the region of the navel.

maṇipūraka मणिपूरक (G 15, 61, 80; YSU I 172, V 9; YCU 13; DBU 49), nābhi which may be the solar (coeliac) plexus (cf. maṇipūra). This centre is said to have, on the analogy of a wheel, ten spokes-may be ten offshoots.

maṇḍala-1 मण्डल-१ (ANU 26) the highest point for concentration in the head, here called the innermost door opening the attainment of the **ātman** (the Supreme Self)-the uppermost mokṣadvāra मोक्षद्वार (door to liberation).

maṇḍala-2 मण्डल-२ (ANU 38), the entire system of centres for concentration in the body. These are also called doors opening into the attainment of the Self.

maṇḍala-3 मण्डल-३ (HP III 117), a particular time unit consisting of a period of 40 days.

maṇḍukāsana मण्डूकासन (GS II 5, 34-5), one of the thirtytwo āsanas¹ enumerated by Gheraṇḍa. It consists in flexing and placing the fore-legs under the two thighs with soles of the two feet turned upwards and the two big toes touching each other. As one would do this and sit on the fore-legs the two knees would naturally be spread out.

mati-1 मित-१ (DU II 1, 11; TSM 34; SAU I (2) 1, 9; VU V 14), one of the ten niyamas. It means having full faith in the ways prescribed by the *Vedas*. While these texts prescribe ten niyamas *Patañjali* mentions only five.

mati-2 मित-२ (VS I 53, 63), one of the ten niyamas. It consists in having faith on all the ordains of the scriptures and omitting those which are not advised by the preceptor.

matsyapīṭha मत्स्वपीठ (TSM 49), one of the principal āsanas¹ according to this text. This is different from matsyāsana. This pītha (āsana¹) consists in placing the right heel at the thicker end of the left thigh encircling the left knee with the right arm and holding the left big toe with the right hand.

matsyāsana मत्स्यासन (GS II 21), one of the thirtytwo āsanas¹ mentioned and explained in this text. It consists in lying on the back with the footlock and holding the head with the two elbows. Other writers add "arching the spine", and some prescribe supporting the hips on the palms with elbows touching the ground.

matsyendra मत्स्येन्द्र (HP I 4), one of the greatest *yogis* of **haṭhayoga** whose disciple was *Gorakṣa*.

matsyendrāsana मत्स्येन्द्रासन (GS II 4, 23; HP I 26-7, 37, 48; TSM 49), one of the principal āsanas. According to GS, it consists in flexing the left leg; placing the left foot on the right knee, the right elbow on it, and the face on the right hand. The abdomen is to be kept a little withdrawn and the gaze fixed between the eyebrows.

This description of matsyendrāsana is far from being clear or adequate. HP explains this important āsana as follows:- flexing the right leg completely and placing the right foot at the root of the left thigh above it, take the left foot round the right knee, place it on the far side of the right thigh and hold its big toe while turning the head completely towards the left and grasping the right ankle by the left hand. HP calls it an āsana taught by Matsyendranātha, while TSM gives it the name matsyapīṭhaka. where the word matsya मत्स्य does not mean fish.

mathana मथन = sumathana सुमथन (YKU II 43, 46, 47), rotating. For khecari-mudrā, according to this text, a swab is inserted up to the top in a nostril and gently rotated.

madhupratīka-1 मधुप्रतीक-१ (VB III 48), a yogī at the third stage of development (progress in yoga) acquires abilities like ESP (vikaraṇabhāva). These siddhis (achievements) are called madhupratīkas by VB.

madhupratīka-2 मध्रप्रतीक-२ (VBh III 48), the term used for three yogic occult powers combined together. These three powers are: speed like that of the mind, knowledge without the aid of sense organs and mastery over the first cause. madhubhūmika मधुभूमिक (VB III 51), a yogī at the second stage of progress in yoga called madhumatībhūmi, where prajñā (supernormal insight) is rtambharā (showing the truth).

madhumatibhūmi मधुमतीभूमि (VB III 51), madhubhūmi, second of the four stages of progress in yoga. It is characterised by rtambharāprajñā (cf. madhubūmika).

madhya-1 मध्य-१ (YS I 22), one of the three degrees of intensity of tivrasamvega, the other two being mṛdu and adhimātra. The intensity of madhya saṃvega is intermediate between those of mṛdu and adhimātra saṃvegas.

madhya-2 मध्य-२ = madhyama मध्यम = madhyamarga मध्यमार्ग (HP II 42, III 4, IV 14, 16, 72, 114), susumnā.

madhya-3 मध्य-३ (HP IV 85, 86), in the intermediatory stage of the practice of nādānusandhāna. This stage may be equated with paricayāvasthā, the third stage in the sequence of four stages of nādānusandhāna. During this stage those internally aroused sounds are heard which are resembling with the sounds of a small drum, a conch, a bell and a gong.

madhyaga मध्यग (HP II 4), middle path.

Here it means along the path of suṣumnā. If nāḍis are full of impurities, the proper channel of prāṇa towards suṣumnā is not possible and thus impurities work as a great obstruction in the attainment of success in

haṭhayoga, since haṭhayoga essentially prerequires the travelling of prāṇa along the path of suṣumnā.

madhyacakra मध्यचक्र (HP III 72), the state of ida and pingala¹ passages being completely blocked. This controls the sixteen adharas by regulating the flow of nervous currents through the neck-throat region.

Brahmānanda in his commentary Jyotsnā describes it as the viśuddhi cakra which controls all the sixteen ādhāras.

madhyamanāḍi मध्यमनाडी (HP III 120), suṣumnā. Practice of āsana, prāṇāyāma and mudrā is said to render it an easy passage for kuṇḍali to go upwards.

madhyamaprāṇāyāma-1 मध्यमप्राणायाम-

γ (G 48, 49; TSM 105-6), one of the three stages of progress in **prāṇāyāma**. It is characterised by (1) each of its three components being of twenty four **mātrās** (units) and (2) trembling. Perfect **prāṇāyāma** is termed **uttama-prāṇāyāma**. *Yogīs* who have by practice learnt **madhyama prāṇāyāma** to this extent feel that their spinal cord is throbbing. (cf. *merukampa*)

madhyamaprāṇāyāma-2 मध्यमप्राणायाम-

Representation (Representation) Representation (Representation

According to HP, this second stage causes tremor in the body.

madhyamā मध्यमा (YKU III 19; YSU III 4), parā, paśyantī, madhyamā and vaikharī are said to be energies which are said to reside in the mūlādhāra, hṛdaya, kaṇṭha and mouth respectively and are responsible for developing nāda (speech) gradually into spoken word. Madhyamā thus appears to be the conative consciousness of spoken word before it is actually uttered.

madhyalaksya मध्यलक्ष्य (ATU 7), a laksya (object of meditation) localised neither exclusively inside the body nor quite outside. It is, therefore, called bāhyābhyantarastha बाह्याभ्यन्तरस्थ vyomapañcaka. The yogi sees the vyomapañcaka in him and himself in it. He then assumes the form of this laksya; that is **samāpatti** in it. The *yogī's* mind becomes one with the laksya. The madhyalaksya is described thus in general terms, "as if there was an unbroken orb of the morning sun of a brilliant elementary (primary) colour; as if there was a range of flames of fire; as if it were absolutely pure sky". In the beginning it is only a feeling of the $yog\bar{i}$, but as he continues to gaze, he actually sees the vyomapañcaka. All the five colours of the sky are not seen at once but one after the other.

madhyaśakti मध्यशक्ति (SSP IV 16), one of the three names of kuṇḍalinī

residing in the body, the other two are adhaḥśakti and ūrdhvaśakti. When all the three are tackled simultaneously, one reaches the highest abode.

madhyāhnārkamaṇḍala मध्याहनार्कमण्डल (MBU II (1) 10), midday sun, one of the visions seen when a yogī is about to succeed in śāmbhavīmudrā. These are, therefore, called cihnas (signs) of success. Six of them are mentioned in order. But perhaps they are not always seen in that order. In one and the same sitting the yogī may see several of them in any order. It is also possible that a yogī sees only one cihna (sign) for sometime and then begins to see others in any order. The midday sun is the sixth in order.

manas-1 मनस्-१ (SSP I 44), mind. It has five characteristics-positive thoughts, negative thoughts, oblivion, inertia and cogitation.

manas-2 मनस्-२ (VBh I 35), a synonym for citta "atra ca manas iti vacanād manaścittayoraikateti bodhyam अत्र च मनस् इति वचनाद् मनश्चित्तयोरैकतेति बोध्यम्".

manas-3 मनस्-३ (YS I 35, II 53), cognition-the knowing aspect of consciousness for which *Patañjali* has used a concrete instead of an abstract term. He means rising of cittavṛttis. Practice of prāṇāyāma², as well as sensations internally aroused, stabilizes manas¹ in this sense.

manas-4 मनस्-४ (SK 27; G 2, 31, 68, 75, 94; HP II 42, III 121, 123, IV 5, 15; GS

IV 2-7, V 57; TSM 14, 21, 114, 116, 129, 134; TBU I 4, 20, 34-5, 39; YKU III 4-6; BY VIII 51, IX 117, 182, 185), one of the three components of antaḥ-karaṇa which is supposed to play a double role. As an indriya manas converts sensations into perception of a concrete object and vague impulses into those for performing this or that definite action. As saṅkalpaka संकल्पक it entertains wishes and desires even when none of the ten indriyas is working. SK speaks of eleven indriyas but of thirteen karaṇas².

BY advises contemplation of **manas** in **buddhi**.

manana मनन (DU II 14), one of the two kinds of mānasa japa (mental recitation), the other being dhyāna. It consists in calling up an image, which may be absent in dhyāna.

manaḥsthairya मनःस्थेर्च (HP II 42), steadiness of mind. When māruta or prāṇa enters suṣumnā, mind attains steadiness. This is possible through the regular and long practice of prāṇāyāma.

manaḥprasāda मन:प्रसाद (BG XVII 16), tranquillity of mind. This is one of the mental austerities.

manaḥspanda मनःस्पन्द (SAU I (7) 28), arising of cittavṛttis. Manaḥspanda stops when the practice of prāṇāyāma becomes easy and pleasant, as also in concentration i.e. when dhyāna succeeds. In fact success in dhyāna is

manaḥspandanirodha-cittavṛttini-rodha.

manogati मनोगति (GS III 58), the ability to go everywhere as one's mind does. According to this text, the *yogī* who masters the **dhāraṇās** can take a trip to the paradise in his mortal body.

manojavitva-1 मनोजिवत्व-१ (YS III 48), speed as fast as that of mind. A yogi acquires this speed of movement if he is successful in saṃyama on grahaṇa, svarūpa, asmitā³, anvaya and arthavatva-the psychical side of prakṛti² (nature).

manojavitva-2 मनोजवित्व-२ (VB III 48), manojavatva मनोजवित्व-२ (VS III 30), speed like that of the mind. According to VB, speed of the mind means that the body acquires very quick motion. The practice of saṃyama on the process of knowing on the essential attribute, on the sense of 'I', on inherence and on the purposefulness of sensation bestows indriyajaya which further gives power like manojavitva etc. VS mentions it to be the result of kevalakumbhaka.

manodusta मनोदृष्ट (BY XI 49), person with mental impurities. Through sanyāsa one becomes devoid of such impurities.

manonmani-1 मनोन्मनी-१ (GS V 57, 91, VII 15), a state of mind which supervenes on performing prāṇāyāma² successfully or developing complete bhakti भक्ति (devotion). Its physiological

condition includes tears and gooseflesh. Another characteristic feature of the physiological condition is that the rate of breathing is increased from 15 per minute to 30 per minute. *Gheraṇḍa* has not used **manonmanī** and **unmanī** as synonyms, as HP has done. According to GS, the former may ultimately develop into the latter, which he has made synonymous with **rājayoga**.

manonmanī-2 मनोन्मनी-२ (NBU 48; HP II 42, III 53, IV 3, 20, 64), merging of the self (= samāpatti) in something which is not a sound emitted or heard, or any other viṣaya⁴ (content of consciousness) for that matter. The condition is the same as Patañjali's nirbījasamādhi and GS's manomūrchā. According to HP, this condition arises when prāṇa² courses through suṣumnā. This author also uses manonmanī² as a synonym of rājayoga. In HP II 42 manonmanī is equated with steadiness of mind.

manomūrchā मनोमूर्छा (GS V83, VII 6, 16; HP II 69), one of the six aspects of rājayoga according to GS. It consists in merging the individual self in the ātman² (brahman). In this state the mind looses itself in the ātman in the sense that there remains the ātman² and ātman² alone in consciousness (cf. samāpatti).

They seem to make no difference between manomurchā and murchā kumbhaka and Gheraṇḍa's murchā

kumbhaka seems to be a state of samāpatti in which ātmā² is the tat and manas² the tatstha.

Manomūrchā is described in VII 6 as this aspect of rājayoga, which is probably the culmination of mūrchā kumbhaka according to GS. HP talks of losing the mind without bringing in ātman.

manoyāga मनोयाग (PBU (P) 18), mental sacrifice. The act of bringing about the union of the direct and the transcendent ātman by the realization "that thou art", "I am Brahman"-is the mental sacrifice.

mantra-1 मन्त्र-१ (YS IV 1), mantrayogaone of the methods of gaining siddhis² (supernatural powers). According to VB, the abilities of flying in the air etc. can be acquired by mantra² yoga. According to HP, the yogī who succeeds in samādhi is beyond the reach of any mantra¹. Patañjali advises recitation of om which signifies īśvara. This recitation is obviously mantrayoga.

mantra-2 मन्त्र-२ (YSUI 131), breathing-hamsa² = expiration and inspiration. Expiration is mentioned first as we do not breathe because we need oxygen and take it in, but because there is excess of CO₂ in us and the need of expiration. This shows their sound knowledge of physiology. When quickly repeated, hamsa² becomes so'ham. This recitation is called mantrayoga.

mantra-3 मन्त्र-३ (YSU II 18, 20) a sacred word or words, repeated in mantra-yoga. Om² is said to be the most important of mantras.

mantrayoga मन्त्रयोग (YTU 19; YSU I 130-132), one of the four kinds of yoga mentioned in YTU, the other three being laya, haṭha and rāja. If a person recites a mantra³, pronouncing the syllables etc. correctly, for twelve years, he gets certain extraordinary powers like knowing about absent things and reducing his body to an extremely small size.

According to YSU, success in mantrayoga transforms respiration into selfrealisation. The former ceases and the latter dawns. This is said to take place in the suṣumnā (inside the spinal cord), as the rising of prāṇa² up along the suṣumnā is supposed to be the way which leads to self-realisation. "Om" is considered, in this text, to be the mūlamantra, the root of all the mantras.

manthāna मन्थान (HP I 6), one of the great $Yog\bar{i}s$ of haṭhayoga of unknown nomenclature. One of the predecessors of $Sv\bar{a}tm\bar{a}r\bar{a}ma$.

mayūrāsana-1 मयूरासन-१ = māyūrapīṭha मायूरपीठ (GS II 5, 29-30; HP I 30; VU V 15; DU III 1, 11; TSM 48), one of the principal āsanas. It consists in resting the palms of both hands on the ground; then placing the parts of the abdomen on either side of the navel on the two elbows, and then adopting the pose by raising the head and the feet in the air parallel to the floor like a horizontal stick. The practice of this **āsana** assimilates unwholesome and overeaten food, promotes **jaṭharāgni** (digestive heat), neutralises poisons and cures all diseases like enlargement of spleen and liver. In a word, this **āsana** makes the *yogī* free from all ailments. The *yogī* balances his body on his elbows as a peacock does on his legs and keeps his head and feet raised horizontally above the ground.

mayūrāsana-2 मयूरासन-२ (VS I 67, 76-77), peacock pose. One of the ten āsanas enumerated by *Vasiṣṭḥa*. Its technique consists in placing hands well on the ground, elbows on both sides of the navel and the body like a stick in the air.

maraṇa-1 मरण-१ (HP II 3, III 38, 87), death, which ensues when life activity is completely exhausted and one is unable to breathe. Slower the respiratory process slower is the rate of exhaustion. Hence yogīs are advised to minimize respiratory activity by practising prāṇāyāma. It is claimed for khecarī that the person who practises it successfully never gets exhausted and therefore does not die. The meaning seems to be that he does not die so long as he is in the state of khecarī. In the context of vajrolī it is said that one who practise this mudrā enjoys a long life.

maraṇa-2 मरण-२ (HP III 7, 13), death which is followed by another birth. The practice of the ten mudrās, particularly mahāmudrā is said to make one immortal in the sense that he is not born again after his body falls.

maraṇa-3 मरण-३ (HP III 11), cessation of activity. Activity which has to do with iḍā and piṅgalā stops in the state of mahāmudrā.

marut-1 मरुत्-१ (HP II 40), breath. So long as suspension of respiration is maintained by **prāṇāyāma**, there arises no mental process and one does not die. If air is swallowed to capacity one floats on water like a lotus leaf.

marut-2 मरुत्-२ (HP III 7), a god.

marutsiddhi मरुत्सिद्धि (GS III 17), the ability of starting a current (probably a nervous impulse which gives a sensation) from the mūlādhāra (the centre for meditation at the base of the spine) which, in the words of Vācaspatimiśra, is sensed as a pipīlikāsparśa पिपीलिकास्पर्श (creeping sensation) rising towards the head. If a person practises mūlabandha (contracting the anal muscles) he acquires this ability soon.

marunnirodha मरुत्रिरोध (SSP VIII 19), holding of the breath. Having drawn the external air through nostrils and held inside is called marunnirodha of pūraka phase.

marman मर्मन् (KU 12, 13, 14), the innermost part of a joint- most probably a nervous structure, a nerve centre. Two

of them are mentioned in this Upaniṣadthe ankle joint (pādasyopari पादस्योपरि
marman) and the knee joint (marmajaṅgha). They are to be cut by prāṇadhāraṇā-the dhyānayoga of this
Upaniṣad. Life is supposed to be concentrated in the marmans and for this
reason we are firmly attached of them,
and that attachment is to be removed.
The number of marmasthānas is here
said to be eighteen.

marmasthāna-1 मर्मस्थान-१ (TSM 129), eighteen innermost parts of the body, including the nine dhyānasthānas (spots for meditation) of Gorakṣa, are called marmasthānas in this Upaniṣad and prāṇadhāraṇā is recommended on each of them. cf. marman.

marmasthāna-2 मर्मस्थान-२ (VS III 61), vital points. There are eighteen vital points from toe to head in the body as recognised by Vasistha. For the practice of pratyāhāra, one is directed to hold the air at different marmasthānas starting from toe and after pulling it from each and every place, ultimately it should be held at vyoma, i.e. bregma, i.e., the eighteenth marmasthāna. The eighteen marmasthānas are-(1) the big toes, (2) the ankles, (3) middle of the calves, (4) upper end of the skin, (5) knee, (6) middle of the thigh, (7) bottom of anus, (8) middle of the body, (9) penis, (10) navel, (11) middle of the heart. (12) cavity of the throat, (13) root of the tongue, (14) root of the nose, (15) region of the eyes, (16) between the eyebrows, (17) forehead, and (18) **vyoma** (bregma).

mala-1 मल-१ (ANU 7, 20; HP II 37-8), impurity. This word is used for (1) the impurities (matter other than the metal) with which metals are found mixed up in ores and which are removed by fanning the fire used to heat them and (2) the indrivakrtadosas इन्द्रियकृतदोष (difficulties caused by sense and action organs), which are removed by prāṇāyāma2, japa and dharma (righteousness). Sthūladhyāna is also prescribed for getting rid of malas. HP includes impurities of the body like phlegm, bile, mucus, which are removed by doing satkarma and prānāyāma².

mala-2 मल-२ (GS I 22), excreta, faeces.
mala-3 मल-३ (GS V 35; HP I 39, II 4-6,
III 119), any kind of obstruction for
prāṇa² in any nāḍī. In one sense
prāṇa courses through the respiratory
organs which also are called nāḍīs¹.
In another sense it travels in the nervous
structures like the suṣumnā. All these
nāḍīs are to be kept clean by a yogī,
as also the nāḍīs through which waste
products are eliminated.

maladeha मलदेह (GS I 19), body full of impurities (cf. mala¹). The body made clean in every way by removing all the impurities is transformed into a devadeha (specially purified body). Literally the body of a god. Other bodies are maladehas.

malaśodhana मलशोधन (HP I 39), purification (of the impurities). It is said that out of eightyfour āsanas, only siddhāsana is capable of purifying seventytwo thousand nāḍīs. Malaśodhana of the nāḍīs is one of the important aspects for bringing the marut to travel along the middle path, one of the essential requisite conditions for the success in hathayoga.

malākula मलाकुल (HP II 4, 5), mala = impurities, wasteproducts, ākula = full of. Thus the compound word meansfull of impurities. When the nāḍis are clogged with impurities, the free flow of prāṇa is obstructed.

mahat महत (VB II 19; SK 3, 8, 22, 40, 56; TSB 3; BY III 27, IX 185), first differentiation in the completely undifferentiated primeval substancepradhāna. It is the lingamātra gunaparva of Patañjali. SK calls it a prakrtivikrti (something which appears something else and in which appears other things). It is itself a differentiation in which other aspects differentiate. It is a form of some matter and is itself a matter of the forms which it takes. Mahat is a form of the primeval substance-pradhana and is itself the matter of the vaikṛtāhaṅkāra and bhūtādi. Avyakta² is the potentiality of which mahat is actuality; but mahat itself is also a potentiality of which ahankara is actuality. The only actualities, in fact, are the śanta, ghora

and mūdha viśesas; and in the last analysis, the only ultimate potentiality is avvakta². Avvakta² is a mere potentiality and these viśesas are the only actualities-actualities in the strict sense of the word. Mahat, ahankāra. indriyas and tanmātrās are neither mere potentialities nor actualities in this sense. In theory they are actualities of some potentialities and potentialities of some actualities. But from the practical point of view all these are mere potentialities. It is only for the scientist or the philosopher that they are actualities of some deeper potentialities. They have no vyāvahārika व्यावहारिक (pragmatic) existence, although for the philosophers and the scientists who know them they are real and exist immanently in everything. Avyakta2 is the last potentiality-the ultimate reality about which neither the scientist nor the philosopher knows anything. According to Vyāsa, we cannot even say whether it exists or does not exist (II 19). Yet it is an ultimate reality, as real as the purusas. This is the Sānkhya theory.

Mahat is thus neither a bare potentiality nor a true actuality. It is an actuality as compared to avyakta and a potentiality as compared to ahaṅkāra. For the layman it is of no value or significance. It has no pragmatic existence. But, for the philosopher or the scientist who knows about it, it is there and exists

immanently in things of practical value about which we all know. The things exist in and through it (cf. VB II 19), though we perceive and imagine only things-not mahat, which we can neither see nor imagine. TSB adopts the Sāṅkhya theory in so far as it holds that the five mahābhūtas are development in the five tanmātrās, these in ahaṅkāra and ahaṅkāra in mahat, which according to this text, is the first form taken by avyakta². According to BY, both mahat (with all that it contains) and avyakta should be contemplated in puruṣa³.

mahatī महती (NBU 11), ninth mātrā in the series of twelve mātrās of praṇava. Each mātrā has been named differently, although collectively all are known as praṇava. The mantrayogī who dies reciting this mātrā is reborn in maharloka.

mahattva महत्त्व (YS I 40), extreme vastness. The choice for **dhyāna** (meditation) may fall on any object from the biggest to the smallest.

The mahattva yoga⁵ of prakṛti is the immense potentiality of prakṛti.

mahākāśa-1 महाकाश-१ (MBU I (2) 13, IV 2, 3; ATU 7), one of the vyomapañcakas. ATU gives this name to one of the five forms of his madhyalakṣya. This mahākāśa is bright like the destructive fire of the end of the world. Of course nobody knows what exactly it is except a successful yogī.

mahākāśa-2 महाकाश-२ (SSP I 31), ether element. One of the five gross elements, which has five characteristics-emptiness, looplessness, beyond touch, having blue colour and sonorous.

mahākleśa महाक्लेश (HP III 13), highly agonizing diseases. Svātmārāma gives a list of such diseases as consumption (kṣays), skin diseases, constipation, glandular enlargement and indigestion. Mahākleśa has been recognised as doṣa i.e. diseases-mahākleśādayo dosāḥ. Brahmānanda in his commentary on this verse identifies mahākleśas with Patañjalean concept of kleśa.

mahākhaga महाखग (GS III 8; HP III 55), literally the big bird. Reference is to the creeping sensations felt in the back. Since they are felt as something rising upwards they are compared to a soaring bird. This experience of the *yogīs* is generally described as **prāṇa**² rising up along the **susumnā**.

mahāteja महातेज (SSP I 33), the great element fire. It has five charactristics-combustion, digestibility, heat, luminosity and red colour.

mahānirodha महानिरोध (BY VIII 21), great control of breath. Having let the air out fully from the nostrils and holding it outside without inhaling, it is called mahānirodha.

mahāpatha महापथ (HP III 4), suṣumnā. mahāpadma-1 महापद्म-१ (GS VI 9), the dhyānasthāna (spot for meditation) at the top of the head described as the sahasradala মहस्रदल (thousand petalled) **mahāpadma**. It is obviously the most important spot in the human body and its functions are legion.

mahāpadma-2 महापद्म-२ (G 61). From the context in G, it appears that Gorakṣa's mahāpadma is the dhyānasthāna next above the anāhata or hṛdaya in the chest.

mahāprāṇa महाप्राण (VS III 55), cosmic prāna.

mahāpṛthvī महापृथ्वी (SSP I 35), earth.
One of the five gross elements. It is characterised as extensiveness changing form, solid, smell and yellow colour.
These are the five qualities of earth.

mahābandha महाबन्ध (GS III 18-19; HP III 18-25; YTU 26, 115), one of the important mudrās. It consists in covering the anus by the left heel, slowly and carefully pressing this heel with the right foot, gently contracting the anal muscles, and retaining the degree of contraction by jalandhara bandha (chinlock). This pose is praised much for the benefits derived from it. According to YTU, mahābandha is one of the twenty members of hathavoga and consists in placing the left heel against the perineum, stretching the right leg and holding the right foot with both hands, fixing the chin firmly to the chest (jālandharabandha), inhaling with both nostrils, restraining breath according to one's capacity, and then exhaling. This is to be repeated by flexing the right leg and extending the left. These two descriptions of this **bandha**, though agreeing in several points are not exactly the same.

mahābhāsvara महाभास्वर (VB III 26), a class of gods who reside in the second bhuvana (world), i.e. tapoloka, along with the ābhāsvaras and satyamahābhāsvaras.

mahābhūta महाभूत (VB II 28; YCU 72), the five elements earth, air, water, fire and ether.

mahāmudrā महामुद्रा = mahatīmudrā महतीमुद्रा (G 32-3; GS III 6; HP III 12-17; YCU 69, 70), one of the five mudrās. By practising them a yogī becomes successful in yoga. This pose is a combination of a pose resembling paścimatāna (with one foot only) and prāṇāyāma.

Mahāmudrā consists in (1) placing the chin on the chest (jālandharabandha). (2) pressing the yonisthāna (perineum) with the left heel, (3) holding the outstretched right foot with both hands and (4) doing prāṇāyāma² in this position, and (GS adds) (5) fixing the gaze between the eyebrows.

According to YCU and HP, mahā-mudrā is to be repeated by changing the position of the two legs each time and the number of times each leg is flexed is to be equal to that for which that leg is extended. This mudrā is called mahābandha by YTU. The practice of this mudrā considerably

enhances digestive ability and cures all kinds of diseases and according to HP, sends **kuṇḍalinī¹** upwards along the **suṣumnā** (cf. *Brahmānanda*).

mahāmeru महामेरु (VU V 62), a synonym for sahasrāracakra.

mahāmoha महामोह (SK 48; VB I 8), one of the five forms of the kleśa viparyaya = (YS's avidyā). According to Vyāsa, mahāmoha is another name for rāga. Attachment to five kinds of externally aroused and five kinds of internally aroused (cf. VB I 35) experiences is the tenfold mahāmoha according to Vācaspati Miśra (cf. SK 48).

mahāyoga महायोग (YSU I 130), yogacatuṣṭaya योगचतुष्टय (the fourfold yoga) in which mantrayoga, haṭhayoga, layayoga and rājayoga are all combined.

mahāliṅga महालिंग (G 12), a strange structure inside the *yoni* (perineum). That it faces backwards towards the suṣumnā (the spinal cord) means that its sphere of activity is along the suṣumnā. When kuṇḍalī is aroused the *yogī* sees a distinctly formed imagean image like that of a gem (jewel). It is said that it appears when the śakti (energy) in the mahāliṅga and kuṇḍalīśakti are aroused. They may be ultimately the same śakti.

mahāvāyu महावायु (SSP I 32), air element, one of the five gross elements. Its five characteristic features are movability, directibility tactuality, dryness, and having smoke-colour.

mahāvideha महाविदेह (YS III 43), bahirakalpitāvṛtti. It is not a cittavṛtti. Vyāsa calls it a dhāraṇā-that in which the citta leaves the body and goes to another object, which may be another body. Bhoja however, explains it as a vṛtti in which the yogī looses even sense of his having a body.

mahāvedha महावेध (GS III 18-20; YTU 26; HP III 6, 24-28), one of the principal mudrās according to GS. It consists in first adopting the mahābandha pose, and then getting into the uḍḍiyāna posture (by raising the diaphragm) and suspending respiration. According to YTU, if while in the mahābandha posture, a yogī practises concentration, stopping his breath, then anila (prāṇa²) soon rises, i.e., he begins to have the creeping sensations in the back. This performance is strongly recommended as a means of success in yoga.

mahāvrata-1 মহালন- (YS II 31), the yamas (restraints) strictly to be observed without any exceptions whatsoever. Perhaps the use of the word is necessitated by the fact that a beginner in yoga may not be able to follow the yamas rigorously and for him, during the course of early practice, an anuvrata अगुन्नत (easy restraint) is suggested.

mahāvrata-2 महाव्रत-२ (SSP VI 47), a variety of sādhakas of the *Nātha* cult. One who has taken the vow of persuing the highest tattva.

mahāvyāhṛti महाव्याहृति (BY III 5, 6),

seven **vyāḥṛtis** which are- $bh\bar{u}r$, bhuvaḥ, svaḥ, mahaḥ, janaḥ, tapaḥ and satyam. These are prescribed during the practice of prāṇāyāma.

mahāśakti महाशक्ति (HP IV 10), great force, as synonym for kuṇḍalinī.

mahāśūnya महाशून्य (HP IV 74), the space below the spot, between the eyebrows. Prāṇa² reaches this spot, which is said to be the source of all siddhis, in the paricaya- avasthā of yoga.

mahāsalila महासलिल (SSP I 34), water element, one of the five gross elements. Its five characteristic features are flowing, drenching, liquidity, gustatory, and having white colour.

mahāsākārapiṇḍa महासाकारिपण्ड (SSP I 35), a synonym for \overline{A} dinātha **śiva**, the first expounder of **haṭhayoga** of $N\overline{a}$ tha cult.

mahāsiddha महासिद्ध (HP I 9; SSP V 53), one who has achieved the power of haṭhayoga, HP gives a list of about 34 siddhas who have achieved the success in haṭhayoga and thus have broken the law of death by its power. One who has devotional attitude towards his guru and cautiously equalising the pādapiṇḍa and also stabilizing oneself in universal bliss-becomes mahāsiddha.

maheśvara महेश्वर (G 5; SAU III (2) 5), synonym for śiva, conceived as first expounder of haṭhayoga. Thus perhaps here it has been said that he knows even the minute details of all the āsanas. māṇḍūkī माण्डूकी (GS III 2, 51-2), one of the five animal mudrās described by Gheraṇḍa. It consists in closing the mouth and moving the root of the tongue without displacing the whole tongue and slowly imbibing the pure secretion which thus oozes. Māṇḍūkī-mudrā is said to ward off old age (keeping the practicant ever young) and prevents the hair from turning gray.

mātangi मातंगी = mātangini मातंगिनी (GS III 3, 68), one of the five mudrās named after animals mentioned by Gheranda. It consists in remaining in neck-deep water for taking in water through both nostrils and throwing it out through the mouth, again taking in through the mouth and throwing out through the nose. This process is to be repeated several times. This **mudrā** is said to overcome old age and death. If a $yog\bar{i}$ performs this mudra in a secluded place, where there is nobody to see him, with his mind not wandering from his ultimate purpose, he becomes like an elephant. The exact qualities of the elephants, which success in this mudrā brings to the $yog\bar{i}$, are not mentioned. Probably the reference is to great strength and composure of this animal.

A $yog\bar{i}$ who succeeds in $m\bar{a}ta\dot{n}g\bar{i}$ mudr \bar{a} remains extremely happy wherever he may be and whatever he may be doing.

mātāpitrja मातापितृज (SK 39), inherited

bodies. The pañcha-mahābhūtas (the five elements) are said to be the śānta, ghora and mūḍha viśeṣas, But, in fact, the three viśeṣas-sūkṣma, mātāpitṛja and prabhūta are the śānta, ghora and mūḍha viśeṣas respectively. The first of them have their base in vaikṛta (sāttvika-rājasika) ahaṅkāra and the second and the third in bhūtādirājasika-tāmasika ahaṅkāra. Sattva² predominates in the first, rajas in the second and tamas in the third.

Of every living being the transmigrating self is the **sūkṣma** part, that which the living being gets from the parents is **mātāpitṛja** part, and the contribution of the **mahābhūtas**, which is responsible for growth of the body, the **prabhūta** part.

mātrā-1 मात्रा-१ (GS V 40, 55; YTU 40-2; TSM 96-7), a unit of time for measuring the duration of pūraka (inhaling kumbhaka (suspending respiration) and recaka (exhaling). It is described as the time taken by the palm, placed on the kneecap, for making one circular movement, which according to YTU, should be followed by a single snap of fingers to make one mātrā. For the measurement of the length of pūraka, kumbhaka and recaka in relation to one another, they advise counting of mātrās; as for example, if a pūraka is of sixteen mātrās, kumbhaka should be of sixtyfour and recaka of thirtytwo mātrās. Similarly, the time required for

uttering a short vowel is said to be one mātrā and that required for uttering a long vowel two mātrās. The uttama (superior) type of sahita sagarbha prānāyāma covers 20, 80 and 40 mātrās; the madhyama (intermediate) one 16, 64 and 32 and the adhama (inferior) one 12, 48 and 24. Bhāvāganeśa and VB on II 50 quote from Mārkandeya Purāna that a mātrā is the time taken by one usual wink of the eye and that if this measure of time is lengthened it is known as atimātra, which is defined by the Bṛhadyogiyājñavalkyasmṛti (VIII 12-3) as the time taken by a single movement of the arm required, (1) for milking a cow (2), for releasing an arrow or (3) for striking a bell.

According to *Vijñāna Bhikṣu*, as well as *Bṛhadyogiyājñavalkya*, the three components of **prāṇāyāma** should be of equal measure.

Brahmānanda on HP II 12 quotes Yājñavalkya, Skandapurāṇa, Yogacintāmaṇi etc. and gives the following definitions of the term **mātrā**; the measure of time taken for:-

- snapping the thumb and the middle finger together three times;
- making three circular movements round the knee by the palm placed on it;
- 3) clapping the hands thrice;
- 4) one respiration;
- 5) one respiration by a person while asleep;

- making a circular movement, neither fast nor slow, by the palm around the knee followed by snapping of the thumb and a finger;
- 7) making one circular movement by the palm around the knee, preceded and followed by snapping of the thumb and finger together.

mātrā-2 मात्रा-२ (G 93), tanmātrā. The theory accepted by Gorakṣaśataka is that there are five different kinds of subtle substances (tanmātrās) in the five sense-organs which are responsible for the five different kinds of sensation. They are, therefore, called by the same name as the five senses (viṣayas). TSB significantly calls them jaivatanmātras.

mātrāsparśa मात्रास्पर्श (BG II 14), contact of the sense organs with their objects.

mādhyasthya माध्यस्थ (SK 19), having neither pleasurable nor painful experiences. The idea is that pleasure and pain do not touch puruṣa¹. They are the concern of puruṣa² only, who has a guṇātmaka component.

mādhyasthyajñāna माध्यस्थज्ञान (VB IV 15), indifference, which results from samyagdarśana (realisation of the Truth).

mānasa मानस (HP IV 6, 24, 54, 62), manas².

māyā-1 माया-१ (VM IV 13), not the reality-illusion. The objects that we perceive are illusory in the sense that they are transitory forms which the gunas take.

māyā-2 माया-२ (YSU VI 48), one of the five **śaktis** (energies). This **śakti** is supposed to reside in the fore-part of the forehead, called the *vyomāmbuja* व्योमाम्बुज.

māyā-3 माया-३ (SSPI 58), one of the five guṇas of the vyaktiśakti. Other four are icchā, kriyā, prakṛti and vāṇī. Māyā is said to be five-fold in nature-having arrogance, hatred, egoism, immaturity and falsehood.

māyūranāda मायूरनाद (DBU 103), internally aroused sound resembling the sound of a peacock.

māruta-1 मारुत-१ (GS III 29; HP II 32), the wind, the air which blows.

māruta-2 मारुत-२ (ANU 38; TSM 140, 142; HP II 4, 41-2, III 123, IV 24, 105, 114), prāṇa² for which both GS and HP use the word mahākhaga.

According to ANU, this **prāṇa**² is raised from **guda** (a centre at the base of the spine) and taken up to the head. In verse 52 G speaks of a combination of **prāṇa** and **apāna** rising to the head and in I 48 of HP **apānānila** being raised again and again in this manner. In fact it is only a matter of sensory experience which is metaphorically described by the *yogīs* in many ways.

According to ANU, if a *yogī* successfully raises this **māruta** to the **mūrdhā** (head) at the time of death, he is not supposed to be born again and according to HP he attains the knowledge of the Supreme Truth.

māruta-3 मारुत-३ (GS V 35, 88; ANU 19; HP I 49, IV 24), the air which is inhaled and exhaled. Faster his respiration earlier the man dies; and so long as this air is not expelled at all, as in ābhyantara kumbhaka (suspension of respiration after inhalation), there is no death. Mental and respiratory activities go on hand in hand. If one of them ceases the other also ceases.

māruta-4 मारुत-४ (HP IV 29), prāṇa⁴. mārga-1 मार्ग-१ (ANU 25), the way a *yogī* wishes to tread; i.e., the one leading to the state which he wishes to attain, presumably **mokṣa**.

mārga-2 मार्ग-२ (G 26), path of a nervecurrent. According to the *Gorakṣaśa-taka*, the normal path for the autonomic nerve-currents is along the two nāḍīs² known as iḍā and piṅgalā. This is here called the vāmadakṣiṇa वामदक्षिण mārga. The path for the currents that are started when the kuṇḍalī¹ is aroused is along the suṣumnā (the spinal cord) and is called the paścima mārga.

mārga-3 मार्ग-३ (G 40), respiratory passage-one on the left side and the other on the right. These are also called the *vāma* वाम (left) and *dakṣiṇa* दक्षिण (right) mārgas respectively.

māhendraloka माहेन्द्रलोक (VB III 26), the third of the seven worlds which make up the universe. Six kinds of gods reside here.

mitāhāra-1 मिताहार-१ (GS V 16; TSM 33;

YKU I 2, 4; HP I 38, 40, 58; DU I 6; VU V 13; SAU I (1) 4, 13), restraint in eating. It is one of the ten **yamas**. According to YKU and HP, **mitāhāra** consists in eating nourishing, soft and sweet food, well lubricated with ghee, to the 3/4 capacity of the stomach and after offering it to God.

YKU, however, does not consider **mitāhāra** to be one of the **yamas**. According to this text, it is the first of the three steps prescribed for attaining samīrajaya. HP on the other hand, not only includes it among the **yamas**, it considers it to be the most important of them. DU (I) 19 uses mitabhojana मित-भोजन as a synonym for **mitāhāra**. GS mentions **mitāhāra** as one of the four prerequisites for **prāṇāyāma²** and adds that a yogī who does not observe the restrictions of diet falls victim to disease and does not attain success in **yoga⁴**.

mitāhāra-2 मिताहार-२ (VSI 50), measured diet. Vasiṣṭha prescribes the measurement of diet consisting of 32 mouthfuls (grāsa) of food for house-holders, 16 for forest-dwellers, 8 for ascetics whereas brahmacārins can consume according to their need.

mithuna मिथ्न (SK 12), combination, fusion, blending with one another. Mixing with one another is one of the four operations of the guṇas (cf. janana).

mithyādṛṣṭānta मिथ्यादृष्टान्त (BY XII 10), false reasoning.

miśra (karmaphala) मिश्र (कर्मफल) (BG XVIII 12), mixed karmaphala. One of the three kinds of the results of the action, the other two being iṣṭa and aniṣṭa. A mixture of desirable and undesirable result is called miśrakarmaphala.

mina मीन (HP I 5), name of a siddhayogi.

mukta मुक्त (HP I 49, III 104, IV 107, 110, 112; ATU 12), a person who is free from transmigration. If somebody gets the opportunity of serving a *yogi* who knows the śāmbhavī mudrā, the person becomes mukta (liberated) according to ATU.

HP mentions the following attainment of a person who can be called **mukta** that he is perfectly clam and free from every kind of dissatisfaction and lives in a waking state appearing as if he were asleep. In fact, he is neither awake nor asleep, neither remembering anything nor devoid of all memory.

muktapadmāsana मुक्तपद्मासन (GS II 21), padmāsana without taking the arms round the back and holding the right toe with the right hand and the left toe with the left hand. Here reference is to the foot-lock of this āsana¹, which is to be adopted for performing matsyāsana.

muktāsana-1 मुक्तासन-१ (GS II 11; HP I 37, IV 67; TSM 46), one of the principal āsanas. It consists in placing the right heel on the left side of the frenum below

the generative organ and the left heel on the right side and pressing them. GS advises placing the right heel above the left heel in the middle below the generative organ.

HP considers this **āsana**¹ to be a variety of **siddhāsana** and advises it for **śāmbhavīmudrā**.

muktāsana-2 मुक्तासन-२ (VSI 67, 81, 82), one of the ten āsanas recognised by Vasiṣṭha. Its technique consists in keeping the left ankle on the penis and the other ankle upon it. Another technique has also been given in which the subtle perineum is pressed from the left by the right ankle.

mukti मुक्ति = vimukti विमुक्ति = mokṣa मोक्ष (G 2, 8, 73, 101; HP I 35, III 59, 101, 103, IV 8, 15, 25, 30; BY IX 34, 43, XI 32, 33; ABU 2-3), the highest end to which all yoga is a means. Yoga⁴ is, therefore, aptly described as the sopāna or the sopānamārga सोपानमार्ग (a ladder) leading to mukti.

ABU has used the words mukti and mokṣa neither in the sense of sāṅkhyan kaivalya, nor has it emphasised the cessation of the process of birth and death (saṃsāra). It has used these words in the sense of jīvanmukti, which apparently is the nirviṣayatva নিবিষ্যুব্ব (detachment) preceding mukti. Cessation of saṃsāra (transmigration) is referred to only in connection with the fourth (turya) state of existence. Obviously the meaning is

that the person who is **mukta** in this sense ultimately gets freedom from birth and death.

BY declares that only those who are too lazy to do anything believe that **mukti** can be gained by a thorough understanding alone. The fact, according to this text, is that without practising the well known eight **yogāṅgas**, **mukti** is impossible. **Jñāna** and **karma** in this sense are both necessary.

muditā मुदिता (YS I 33), joy. Cultivation of the attitude of joy towards those engaged in meritorious deeds. This helps in attaining mental clarity.

mudrā-1 मुद्रा-१ (HP I 43, 55-6, III 5, 7, 14, 120-126, IV 35-7, 43-5, 67; SS IV 20, 23-6, 29, 35-6, 47, 53; G 33-4; GS III 1-3, 57, 66; VU V 68), pose, attitude. Asanas are postures, mudrās are states midway between asana and pranayāma as explained by some writers on yoga. They are said to be more subtle than the former. Many mudrās involve suspension of breath also, which āsanas generally do not. Mudrās are obviously much more important for a $yog\bar{i}$ than the **āsanas**. GS has raised them to the dignity of a separate vogānga (component of voga), though Patañjali has not mentioned them at all. While G mentions only two mudrās namely mahāmudrā and khecarī, GS has included the three bandhas (locking of limbs) and the five bhūtadhāraṇās also among the mudrās. Ten mudrās are mentioned in HP and SS. It appears that there is a whole continuum of postures, running from what Swāmī Kuvalayānanda calls cultural poses, through the meditative poses and easy mudrās, to khecarī and śāmbhavī which affect the most vital parts of the nervous system and involve samādhi. The particular arrangement of the jaws and the tongue which is a part of siṃhāsana is often called siṃha mudrā.

According to Swāmī Digambarjī of Kaivalyadhāma, Lonāvla, **mudrā** is the attitude of body and mind which an advanced *yogī* adopts when he is on the verge of a unique spiritual experience (see YOGA TO-DAY, published by the Friends of Yoga Society, Bombay, 1971).

mudrā-2 मुद्रा-२ (SSP VI 29, 30), that which expresses the bliss of union of individual soul and universal soul. Mudrā has been conceived always as auspicious and beneficial since through it one attains the bliss of the union of jīvātmā and paramātmā. Even God rejoices in mudrā.

mudrikā मुद्रिका (GS III 51), mudrā. muni मुनि (BG II 56, 69, V 6, 28, VI 3, X 26, 37; BY II 65, XI 52), ascetic. One who remains totally unperturbed by adversities, unattached towards the pleasures, who has got rid of passions, fear and anger entirely and whose intelligence has established in stability. One who is well restrained and looks within oneself all through by contemplation.

mumukṣā मुमुक्षा (VU II 4, IV (1) 12), desire for mokṣa (emancipation), (though whether it could be called a desire is a question). It is a man's inclination all the same. Yogīs in the first three bhūmis (stages of development) are said to be mumukṣu मुमुक्ष (desirous of moksa).

mūrchā-1 मुर्छा-१ = mūrchanā मुर्छना (GS V 46, 83, VII 6, 16; HP II 44, 69), one of the eight kumbhakas. It consists in suspending respiration, without first effortfully exhaling or effortfully inhaling, and shutting out all objects whatsoever, from consciousness. This will ensure what Patañjali would call cittavrttinirodha. But it brings ananda (bliss) which shows that there is not complete nirodha (suspension of every kind of consciousness) in this state. It is a state like Patañjali's nirbija samādhi in which the samādhi prajñā consists of ānanda and asmitā which are not objects. GS seems to have equated murcha pranayama with the aspect of rajayoga which he calls manomūrchā, merging of citta, probably in atma2. HP does not mention suspension of breath as a part of mūrchākumbhaka, though it also brings in suspension of mental activity and the feeling of bliss.

In this text the words **mūrchā** and **mūrchanā** are used as synonyms and

stand for first inhaling, then forming a firm **jālandharabandha** (chin-lock) and then exhaling slowly.

- mūrchā-2 मूर्छा-२ = manomūrchā मनो-मूर्छा (HP II 69; GS VII 6, 16), suspension of all mental activity which is a part of mūrchākumbhaka.
- murchā-3 मूर्जा-३ (HP III 38), stupor, which the person practising **khecarī** does not know.
- mūḍha-1 मृढ-१ (SK 38), that in which tamas² predominates. Material creation consists of material objects which are called mūḍhaviśeṣas, because tamas² predominates in them. Śānta and ghora viśeṣas, according to SK, are sūkṣma and mātāpitṛja respectively in which sattva and tamas² predominate.
- mūḍha-2 मूढ-२ (VB I 1), one of the five bhūmis of citta², the other four being kṣipta, vikṣipta, ekāgra and niruddha. According to VM, tamas² predominates in this state of mind. Dreamless sleep is a mūḍha² state of the mind for the same reason.
- mudha-3 मूढ-३ (BY II 24, 97), one of the three states in all of which brahman is immanent, the other two states being śānta and ghora. Since tamas predominates in the mudha condition, everything material in the sense in which we understand this word today, would be mudha, and in living beings the dreamless sleep state would be mudha as tamas is comparatively more active

in this state. All is **brahman**. This is monistic **Vedānta**.

- murti मूर्ति (VB III 53), form, one of the causes of differentiation. On the basis of form, objects can be differentiated.
- mūrtimat मूर्तिमत् (ATU 10), one of the two kinds of manaskatārakayoga, the other being amūrtimat. The object (lakṣya) of manaskatāraka (= mūrtimattāraka) is known by an indriya (sense). This indriya is not any peripheral sense organ. It is the central sensing apparatus. Even while the eyes are closed the manaskatāraka-lakṣya is said to be seen with the cakṣu indriya in this sense.
- mūrdhā मूर्धा (VS III 64), top of the head, the last vital point in the series of eighteen vital points. It has been further renamed by *Vasiṣṭha* as **vyoma** in verse number III 73.
- mūlakanda मूलकन्द (SSP II 1), bulbous root, root of the nāḍīs situated in the mūlādhāra cakra.
- mūlacakra मूलचक्र (VS II 14), originating point of the cakras. This is located in the nābhi, the centre of the kanda. This has been described as a circle where the individual moves motivated by merit and sin.
- mūlataḥsarga मूलत:सर्ग (SK 54), the lower levels of creation. It consists of lifeless objects. It is one of the three big divisions of creation, the other two being **ūrdhva** (higher) and **madhya** (middle). These two are sattvaviśāla (sattva

dominant) and rajovisāla (rajas dominant) respectively, while the mūlataḥsarga is tamoviśāla (tamas dominant).
mūlaprakṛti मूलप्रकृति (SK 3), avikṛti (= avyakta = pradhāna). It is so called because it is matter and matter alone. It is primeval matter which assumes different forms. Patañjali's word for it is aliṅga, and according to Vyāsa, it is such an indeterminate reality that we can say nothing about it-not even whether it exists or does not exist (II 18). This is why some ancient Indian thinkers call it māyā. It is anirvacanīya अनिर्वचनीय (indescribable).

mūlabandha-1 मूलबन्ध-१ (G 37; GS III 13; HP III 6, 60-8; YTU 26, 121; YCU 45-7), Gheraṇḍa includes mūlabandha among his twentyfive mudrās. It consists in pressing the region between the anus and the scrotum with the left heel, contracting the anus, pressing the navel against the spine, and placing the right heel against the pubes.

G and YTU omit the last of these actions and G, HP and YTU all include raising the apānavāyu. Pressing the navel against the spine, of course, helps this vāyu⁴ to rise. According to YCU, by regularly practising mūlabandha, apāna and prāṇa¹ are joined, faeces and urine becomes scanty and even an old man becomes young. Contracting the anal muscles is a muscular action which promotes the rising of apānānila (cf. HP I 48).

mūlabandha-2 मूलबन्ध-२ (TBU I 27), concentration on brahman, who is the mūla मूल (source) of the entire universe and by whose grace the mind is controlled, is mūlabandha², according to TBU. This is a Vedāntic interpretation of the term.

mūlaśakti मूलशक्ति (YSU V 37), sarasvatī (= ādhāraśakti = kuṇḍalinī).

mūlaśodhana मूलशोधन (GS I 13, 41), one of the four dhautis. It consists in first scrupulously cleaning the lowest bowel either with a stick made of the root of the turmeric plant, or the middle finger, and then washing it several times. This mudrā, as it is called by this text, cures constipation and indigestion. It gives brightness and strength and promotes jaṭharāgni (digestion).

mūlasthāna मूलस्थान (HP III 73), the starting point of suṣumnā nāḍi.

mūlāgni मूलाग्नि (YSU V 30), the basic fire. One of the five varieties of fire residing in the body. This fire resides in the whole body and is responsible for the origin of nāda. The remaining four agnis are: kālāgni, vāḍavāgni, pārthivāgni and vaidyutāgni.

mūlādhāra मूलाधार (GS III 40), ādhāra. Kuṇḍalī is said to sleep in this region of the trunk.

mṛtavat मृतवत् (HP IV 107), like a dead. One who has completely controlled the modification of citta, becomes like the one who is dead. After mastering all

- the stages of $n\bar{a}d\bar{a}nusandh\bar{a}na$, the $yog\bar{i}$ remains in this world as if he is dead.
- mṛtāvasthā मृतावस्था (HP III 27), stage beyond the capacity of maintaining the kumbhaka. When such stage comes, the breath should be exhaled.
- mṛtāsana मृतासन (GS II 4, 19; HP I 32), śavāsana.
- mṛtyu-1 मृत्यु-१ (GS III 71), death which is not followed by another life like maraṇa². According to this text, the yogī who practises pārthivīdhāraṇā regularly, conquers death in this sense, i.e. he is not born again after he dies.
- mṛṭyu-2 मृत्यु-२ (HP III 51, 56, 58, 87, 112), maraṇa¹.
- mṛṭyu-3 मृत्यु-३ (HP III 29, 37, 43, 78, IV 2), marana².
- mṛdu मृदु (VS I 22), one of the three kinds of tīvrasaṃvega, the other two being madhya and adhimātra. The degree of intensity of this kind of yoga is the lowest in the three scales.
- meghadhvani मेघध्वनि (DU VI 36), sound resembling the thunder of clouds. As a result of the practice of ṣaṇmukhi-mudrā, after vāyujaya, the internal sound (nāda) is produced. This is the sound produced at the intermediatory stage of nādānusandhāna.
- meḍhra-1 मेढू-१ (G 8, 13, 14, 16, 86), svādhiṣṭhāna-one of the nine dhyānasthānas according to G.
- medhra-2 मेढू-२ (VS III 69), penis. One of the eighteen vital points.

- meru मेरु (SS II 1), a synonym for vertebral column.
- merukampa मेरुकम्प (GS V 56), vibration in the spinal cord, which is felt when the *yogi* practises what they call madhyamaprāṇāyāma.
- merudaṇḍa मेरुदण्ड (GS III 12), spinal cord.
- merupṛṣṭha मेरुपृष्ठ (GS I 19), back. For doing agnisāra the navel is pressed hundred times so as to touch the back.
- melana मेलन (YKU II 5, 9, 12), practice of khecarī and the insight gained by it are two different things. The yogī who just practises khecarī cannot by practice alone acquire that knowledge which is much more difficult to gain than mere practising khecarī. This knowledge can be had only from a competent guru. The yogī can get success in khecarī as described by so many śāstras (authoritative texts) only when the yogī is blessed with the realisation here called melana; then the yogī becomes immortal, i.e. free from transmigration.
- maitrī मेत्री (YS I 33, III 23), friendliness. By cultivating a friendly attitude towards those who are happy, i.e. by not grudging their happiness, one gets peace of mind.
- mokṣa-1 मोक्ष-१ (ANU 26; G 73; GS III 80; VB II 15, 18, 23-4, III 26, IV 25; HP I 35, III 101, 103, IV 15, 25, 30), deliverance from the bondage of transmigration.

mokṣa-2 मोक्ष-२ (VB, VM II 15; VBh I 3), liberation. One of the four aspects of yoga śāstra. While discussing four parts of the yoga śāstra i.e., heya, heyahetu, hāna and hānopāya, mokṣa has been conceived as hāna. And this hāna consists in the total cessation of association between pradhāna and puruṣa. Establishment of the self or seer principle in its own form is also known as mokṣa according to VBh.

mokṣada मोक्षद (BVU 51), one of the three kinds of ācārya (guru²-teacher). It is the true guru² who leads the disciple to mokṣa (emancipation).

mokṣadvāra मोक्षद्वार (ANU 26), gateway of liberation. One of the seven gateways for realising the self. This door leads to the non-differentiated brahman.

mokṣapatha मोक्षपथ (VS II 26), way to liberation, a synonym for suṣumnā nāḍī.

moha मोह (SK 48), sloth one of the five viparyayas. It is generally identified with the kleśa asmitā and the commentators connect the eight forms of moha with the eight aṇimādi siddhis. This connection can, however, be established only if we interpret the word moha as 'pride'. The relation of these siddhis with moha as asmitā is rather far-fetched.

mauna मौन (TBU I 15, 22), silence. TBU recognises fifteenfold yoga; and mauna is fourth in the sequence. Since

nothing can be expressed completely by $\mathbf{v}\mathbf{\tilde{a}k}$ or articulated sound, so **mauna** is the best of all nomenclatures based on the inherent qualities of the things to be named.

ya- य

yatamānasaṃjñā यतमानसंज्ञा (VM, VBh I 15), first in the series of four kinds of vairāgya. This consists in the practice of detachment preceded by a conscious non-attachment. This vairāgya is followed by vyatirekasamjñā.

yati यति (BG IV 28), ascetic. Who is diligent in following severe vows.

yatheṣṭadhāraṇa यथेष्टधारण (HP II 20), holding it easily. After the purification of nāḍīs, one is capable of retaining breath inside with ease.

vama-1 यम-१ (YS II 29, 30; HP I 38: YTU 24, 28; SAU I (1) 2; MBU I (1)-3; VU V 11-13; DU I 6; TBU I 15-17; BY VII 32, IX 35), (literally) restraint. By YTU and HP laghvāhāra (eating a little) is mentioned as the principal yama and nothing more is said about any of the other vamas. For SAU, as also for Patañjali and BY, yama is one of the eight angas (components) of yoga. While Patañjali mentions only five yamas but in this *Upaniṣad*, as in many other texts, ten yamas are mentioned of which ahimsa, satya, asteya and brahmacarya are common to Patañjali's list. Sauca (cleanliness), (which is a **niyama** according to *Patañjali*) is generally mentioned as a yama. Dayārjavakṣamādhṛtimitāhāra (compassion, straightforwardness, forgiveness, fortitude and restraint in eating) are generally included among yamas. Patañjali's aparigraha (not owning property) is often omitted by other writers.

MBU classifies the **yamas** into (1) control over the feeling of cold, heat, hunger and sleep; (2) over present tranquility of mind; (3) not wavering from the chosen ideal; and (4) preventing the **indriyas** from running after their objects.

yama-2 यम-२ (TSM 28), TSM defines yama² as a sense of separation from the body, the sense and the karmendriyas.

yama-३ यम-३ (VS I 33, 35, 38, 52), first in the sequence of eightfold yoga. Vasiṣṭḥa enumerates ten yamas. He has excluded 'aparigraha' of Patañjalean yama from his list and included dhṛti, kṣamā, dayā, ārjava, mitāhāra and śauca. However, śauca is available in PYS under niyama, but other yamas enumerated by Vasiṣṭḥa are found neither in yamas nor niyamas of Patañjali.

yama-4 यम-४ (BG X 29, XI 39), kind of death.

yami यमी (HP I 62, III 118), epithet for advanced practitioner of yoga such as who is capable of arousing kuṇḍalini. yaśasvini-1 यशस्विनी-१ (G 18, 21; TSM 72; YCU 17, 20; SAU I (4) 9, 11) one

of the principal $n\bar{a}d\bar{i}s^2$. It runs from the $n\bar{a}bhikanda$ to the left ear according to YCU, and to the right ear, as it appears from the wording of the text according to TSM. According to SAU, $ya\acute{s}asvin\bar{i}$ is situated between the $g\bar{a}ndh\bar{a}ri$ and $sarasvat\bar{i}$ $n\bar{a}d\bar{i}s$. It goes from the $kundalin\bar{i}sth\bar{a}na$ to the big toes.

yaśasvini-2 यशस्विनी-२ (VS II 31, 35), one of the fourteen important nāḍis originating from kanda which spreads on the right side downward to the right toe.

yoga-1 योग-१ (YS II 28; HP I 10, 14-16, 36; BY I 1, 10, II 27, 66, VIII 35, IX 32-3, XII 49), a whole discipline (consisting of many components). Patañjali's yoga consists of eight members; namely the five yamas (abstentions), the five niyamas (observances), āsana (posture), prāṇāyāma (stopping of breath), pratyāhāra (withdrawal of all impulses to enjoy objects of perception), dhāranā (continued attention to an object), dhyāna (single mindedness) and samādhi (mind becoming one with the object of dhyāna). This is yoga which leads to vivekakhyāti (gnosis), the only means of getting rid of the duhkha experienced by everybody caught in the cycle of birth and death. Yoga is essentially Indian and the old Indian yogis, without an exception, all believed in transmigration of the soul and considered liberation to be the summum bonum. Without these beliefs

yoga, even in all its depths, has no meaning, not to speak of just asana and prānāyāma. Judged from this standard, even if a person has mastered all the eight components of yoga, he cannot be called a $yog\bar{i}$, if he has not done it with the object of attaining moksa (liberation). We can coin another word for referring to such a person e.g. "Yogist" if we choose. Yoga is thus the science and art of (1) accelerating the progress towards liberation, and (2) the various ways and means adopted by the Indian yogis to achieve this end. The abstinences, observances and all the practices and experiences in themselves happen to be of inestimable worth to humanity, irrespective of a belief in the theory of transmigration and release. This is a different matter. They cannot be called yoga in its original sense.

yoga-2 योग-२ (YS I 1; 2; SAU I (7) 24), samādhi. Reading the first two sūtras of the first chapter of Patañjali together, it becomes clear that they introduce only the first chapter of the book to the reader. The first chapter deals with the various types of samādhis and their pre-requisites. Thus the sūtra I 2 is not a definition of the term yoga. Patañjali's yoga² is unambiguously an eightmembered discipline. The yoga² referred to in these sūtras is only cittavṛtti nirodha (samādhi). It would be certainly more correct to say that Patañjali's definition of yoga is "yogaḥ yamani-

yamāsanaprāṇāyāmapratyāhāradhāraṇādhyānāni cittavṛttinirodhaśca". SAU considers yoga² to be one of the two stages of making the citta inactive, the other being jñāna. On attainment of jñāna the yogi ceases to perceive the universe as consisting of real objects. Patañjali's word for such jñāna is vivekakhyāti, which is the outcome of the practice of yoga¹. A firmly established vivekakhyāti Patañjali calls dharmamegha samādhi.

yoga-3 योग-३ (YSU I 65-9; HP III 63; BY II 49, 69, 138), union of (1) prāṇa and apāna¹, (2) rajas and retas, (3) sūrya² and candra and (4) jīvātmā and paramātmā.

The first and the third of these unions are, in fact, only series of sensations which are experienced as ascending, descending and mixing. These sensations may be felt on the right and left sides or in the middle of the back. Nearly all the writers on yoga speak of something rising up along the susumnā and of the rising being redirected from idā and pingalā, sometimes called candra³ and sūrya² respectively, to the susumnā; i.e. from the right and left sides to the middle of the back. The fourth union is the Monistic Vedānta View of yoga, according to which the successful yogin becomes one with brahman, the Supreme Reality. The second union referred to here is between the secretion from the lower regions of **suṣumnā** and that from the higher regions (cf. **rajas**).

BY uses the word **yoga** for union of **jīva** and **brahman** and for that *ṛṣi* advises concentration of consciousness on **brahman** in the form of **om**. This text describes union with **brahman** as nirmalatā निर्मलता (purity) probably meaning absence of **avidyā**. The **kleśas** are considered to be sources of all evils which make a **jīva** of **brahman**.

yoga-4 योग-४ (BY XI 34), performing, practising. Performing sacrifices and other religious rites and practising dama (control of indriyas), ahimsā, dāna and svādhyāya leads to self-realisation.

yoga-5 योग-५ (BY I 44, II 138), getting the mind confined in the oṃkāra placed in endless space of heart.

yogakṣema योगक्षेम (BG IX 22), attainment of unattained thing and preservation of things attained.

yogacakṣu योगचक्षु (BY IX 128), yogic eye, which gives extra-sensoryperception.

yogacikitsā योगचिकित्सा (HP V 22), treatment of diseases through yogic methods. Svātmārāma in fifth chapter of HP describes treatment of different diseases arising out of erroneous practices of yoga, specially prāṇāyāma (HP V 1). However, in this verse, Svātmārāma seems to suggest the treatment of any diseases through yoga. But he has suggested to apply yoga-

cikitsā preferably by combining a careful treatment in consonance with the method prescribed by the science of medicine, i.e., $\overline{A}yuveda$.

yogatantra योगतन्त्र (HP III I), practices of yoga¹. All such practices aim according to this text, at awakening the kuṇḍalīśakti and thus centre round kuṇḍalī.

yogadharma योगधर्म (BY XI 1), conduct prescribed by yoga. BY declares that all the other religious conducts (excluding yoga) are full of imperfections and hence cause rebirth. But yoga never goes in vain. Certainty of success lies in its practice.

yogadhāraṇā योगधारणा (BG VIII 12), determination in yoga or dhāraṇā as described in yoga. Fixing the mind in one place or at one object or concentrating the mind in the lotus of heart or fixing one's own vital force in the head is called yogadhāraṇā.

yoganidrā योगनिद्रा (HP IV 49), a state attained as a result of the practice of khecarī. Since in this state overt as well as covert life activities are reduced to minimum and the vāyu as well as the mental process gets stabilised in their own place, it is termed to be yoganidrā.

yogapratipakṣa योगप्रतिपक्ष (VB I 30), yogamala (VB I 20), yogāntarāya (VB I 30), foes of yoga. Nine distractions of mind are known as impurities of mind or obstacles for yoga. These distractions of mind occur alongwith the modifications of mind. Nine distractions are vyādhi (sickness), styāna (idlenes), saṃśaya (doubt), pramāda (negligence), ālasya (sloth), avirati (lack of detachment), bhrāntidarśana (misapprehension), alabdhabhūmikatva (failure to attain stability in concentration), anavasthitatva (inability to stay in the stage of concentration attained). All three terms are synonymous technical names for these obstacles.

yogaphala योगफल (VBh I 1), result or fruits of yoga in the form of overcoming the prārabdhakarma like expiation etc., and immediate release from them is called the result of yoga. So also, when all the subliminal impressions are destroyed and in the absence of the accompanying subliminal impression of experience, even the karma which has started giving results, become incapable of giving rise to the fruits, is known as result of yoga.

yogabala योगबल (BG VIII 10), power of concentration which consists in stead-fastness of mind arising from accumulation of impressions resulting from spiritual absorption.

yogabhrasta योगभ्रष्ट (BG VI 41), person unable to attain success in yoga in one life. He is born in the house of the pious and the prosperous.

yogamaṭha योगमठ (HP I 13), ideal hut for the practice of haṭhayoga. Svātmārāma suggests that the ideal hut should have a small entrance and no other openings, holes or pits, floor should neither be too high nor too low, but well besmeared with a thick layer of cowdung, clean and free from all insects, there should be a canopied platform and a well in the compound outside of which should be enclosed by a wall.

yogamala योगमल (VB I 30), hindrance in yoga (cf. yogapratipakṣa).

yogasādhanā योगसाधना (BY II 66), means of yoga. BY conceives that praṇava or om alone should be known as the best means.

yogasiddhi-1 योगसिद्धि-१ (HP I 65), success in yoga. Achievement of the stage of nādānusandhāna.

yogasiddhi-2 योगसिद्धि-२ (BY IX 196), accomplishments of yoga. Ability to disappear, memory, lustre, vision and proficiency in the *Vedas*, leaving one's body and entering into other's and producing things at will are the characteristics of the yogic accomplishments.

yogastha योगस्थ (BG II 48), having established in yoga. Casting off attachment and remaining equipoised in success or failure is the state of establishment in yoga.

yogāgni योगाग्नि (BY VIII 35) = yogānala योगानल (GS I 8), fire of yoga. Through it man becomes sinless, passionless, pure and like a burnt-rod. The fire of yoga consists in mantra, homa, mārjana, abhyukṣaṇa and prāṇāyāma, a combined practice of all. yogānga योगांग (G 4; YS II 28-9; YCU 2), component of yoga¹. Six components are separately described by G; but no hard and fast lines are drawn to distinguish one from the other. Yoga² is said to be performed in the state of (1) **āsana** which is one of yogāngas; and it appears that according to G, it is not essentially different from his (2) prānasamyama- which is another. Even (3) $dh\bar{a}ran\bar{a}$, (4) $dhy\bar{a}na$, and (5) samādhi are said to be prānasamyama (96) in a sense. The most important yoga¹, the central process of G's yoga, thus seems to be pranasamyama according to this text. Depriving the sūrva in the chest of the nectar which flows from the throat is called (6) pratyāhāra. Patañjali has given eight yogāngas. He adds yama and niyama and considers the practice of all of them to be the means of attaining the ultimate aim of yoga1, Viz vivekakhyāti, which leads to kaivalya (emancipation).

Some other texts have omitted yama and niyama also. But these are perhaps taken for granted by them, as practice of restraints and observances were in those days considered to be a necessary qualification for those who sought admission to an āśrama for learning yoga¹. From HP I 17, and the colophons at the end of the second, third and fourth lessons of HP, the yogāṅgas appear to be the following four according to this text: āsana, prāṇāyāma², mudrā and samādhi.

yogāntarāya योगान्तराय (VB I 30), obstacles in yoga (cf. yogapratipakṣa).

yogārudha योगारुढ (BG VI 3), ascending the steps of yoga (dhyāna), or getting established in yoga. Action is said to be the means for ascending the steps of dhyānayoga. So also, a person who has given up thought about everything and does not get attached to the actions or sense objects is said to be established in yoga.

yogāsana योगासन (GS II 45; ANU 18), one of the āsanas mentioned in GS. It consists in turning the feet upwards and placing them on the opposite knees and then gazing at the tip of the nose after a complete inspiration.

This shows that gazing at the tip of the nose while suspending respiration is a part of this **āsana**. ANU considers this **āsana** to be one of the four **āsanas** fit for **dhyāna** and to be necessarily accompanied by **agnidhāraṇā**.

yonibandha योनिबन्ध (YTU 121), mūlabandha.

yonimudrā योनिमुद्रा (GS III 38-48; DBU 86; YCU 59; HP III 42), one of the twentyfive mudrās mentioned in GS. It consists in first adopting the siddhāsana, then closing the ears, eyes and the nostrils with fingers and retaining breath after complete inhalation through the mouth by forming kākīmudrā-thus combining prāṇa^{3,4} and apāna-and then rousing the kuṇḍa-linī, carrying it to the head along with

the self and enjoying perfect bliss by becoming one with **brahman**.

Although mulabandha (contracting the anus) helps in raising bindu2 to the head, the difference between mulabandha and vonimudra seems to be that while this rising of something along the susumnā (the spinal cord) up to the $yog\bar{i}'s$ head is a part of **yonimudra**, mūlabandha may be practised without such a rising. In other words mūlabandha becomes vonimudrā if it is accompanied with this udghāta (rising). In the words of YCU, by performing vonimudrā the bindu² is forced upwards as if it were thrown in fire and had to rise to escape burning. In this context bindu is often equated with kundalini. The word generally used by writers on yoga for something perceived as rising upwards along the back is prāna² (cf. bindu-4).

yonisthānaka योनिस्थानक = yonisthāna योनिस्थान = yoni योनि (G 8, 11, 12; GS II 7; HP I 35, III 60-62; YCU 7, 8; DBU 44), perineum-the seat of mahāliṅga near the gudā (anus). The metaphor of flower and its ovary is well kept up in these texts. The dhyānasthāna (spot for meditation) ādhāra is the lotus of which yoni is the ovary. They speak of pressing the yoni instead of gudā or ādhāra.

ra -र

rajas-1 रजस्-१ (SSP I 51), one of the five components of kulapañcaka. Dāna

(charity), **bhoga** (enjoyment), Śṛṅgāra (ornamentation), vastugrahaṇa (reception of the objects), and svārtha (selfishness) are the five characteristics of rajas.

rajas-2 रजस-२ (VB I 2, II 18, III 43, IV 31; SK 13, 54), movements of frequencies intermediate between those of sattva² and tamas². According to Patañjali and Sānkhya, even objects which appear to be stationary and stable are all the time undergoing transition and are unstable at bottom; and prakrti² (nature) in action is thus a continuum of complex movements of different frequencies. It appears that the upper end of the scale is sattva2predominant and the lower tamas¹predominant. These three terms, however, are strictly relative. We can distinguish sattva2, rajas1 and tamas2 in every band of frequencies, from wherever in the continuum the band is picked up.

SK calls **rajas** stimulating and mobile. This fits well into the **Sāṅkhya** theory as nature's movements of intermediate frequencies may appear as movements in the physical world and those of comparatively lower frequencies in the high frequency band as emotion and violent urge in the mental world. The influence of **rajas** is thus seen to be predominant in physical movement as well as in emotion etc.

rajas-3 रजस्-३ (YSUI 68, 137), devītattva

देवीतत्त्व (the feminine principle) which resides in the **yoni**. One aspect of the **yoga** taught in this *Upaniṣad* is the union of **rajas**² and **retas** (the masculine principle) which resides in the throat.

According to *Upaniṣadbrahmayogi*, the feminine principle is Śakti and the masculine principle śiva and the union of rajas and retas śivaśaktisaṃyoga, which is rājayoga. Rājayoga gives the siddhis³ (extraordinary powers) like aṇimā (becoming extremely small, even of a microscopic size) according to YSU.

rajas-4 रजस्-४ (HP III 95, 97, 98), secretion from the lower parts of suṣumnā. Mixing of retas¹ and rajas³ by vajrolī mudrā is very much praised by HP and SS and is considered to be an important yogic practice.

ratna रत्न (YS II 37), a thing of the highest value. When the habit of not misappropriating or stealing is firmly established, one is rewarded with possessing all the things of the highest value. Gold and precious stones are not considered to be things of the highest value by the yogīs. Reference seems to be to acquiring the highest virtues.

ratnaprabhāmaṇḍala रत्नप्रभामण्डल (MBU II (1) 10), one of the signs indicating success in śāmbhavīmudrā. It is the vision of a round light shining like a jewel, presumably of any colour. It is a tārakalakṣya-a viṣayavatī

pravṛtti (YS I 35) = a divyarūpasamvit दिव्यरूपसंवित् (VB).

ravi-1 रवि-१ = bhāskara भारकर (G 57, 63), literally the sun. Here it stands for something in the navel region presumably heat, which dries up the nectar flowing from the centre above called śaśi (moon).

ravi-2 रवि-२ (G 58), the sun. The śambhu शम्भु (God) in the **hṛdaya** (chest) is compared to the luminous sun.

ravi-3 रवि-३ (BY IX 95), synonym for sun.
A golden pitcher having thousands of small holes through which the rays come, therefore, he is named as ravi.

raśmisamjñaka रश्मिसंज्ञक (BY IX 96), having the form of raśmi, i.e. rays. Iḍā and suṣumnā are two nāḍīs existing in the form of rays.

rasa-1 रस-१ (VB I 35), taste. It is said to be one of the five objects of sense-a viṣaya⁴.

rasa-2 रस-२ (VB I 45, II 9), one of the five tanmātrās. It is the aviśeṣa of the viśeṣa ap. This tanmātrā in the tongue is stimulated by the rasa² tanmātrā in the stimulus and gives a gustatory sensation.

rasa-3 रस-३ (HP IV 26-7), mercury. Steadiness of mind is compared to that of mercury. Both work wonders when stabilized. Mercury imparts ability to rise to the body and mind to **prāṇa**.

rasana रसन (SK 26), sense of taste-one of the five **buddhindriyas** (senses). The physiological organ tongue is not

rasana in this context (cf. **indriya**¹⁻²). It is something very subtle which, like the other senses (**indriyas**), transmigrates with the soul.

rasānanda रसानन्द (GS VII 5), one of the six aspects of rājayoga. This is the aspect of rājayoga attained by success in khecarīmudrā, its characteristic being the bliss accompanied with the subjectively aroused tastes of objects like butter, ghee, milk, honey. Like the other aspects of rājayoga mentioned by GS, this also does not seem to be an established state of rājayoga. It looks like a passing phase-a temporary experience of rājayoga.

rākā राका (YSU V 24), one of the sixteen principal nāḍīs. The function of this nāḍī² is to dry up water. It causes hunger and collects phlegm in the nose. rāga राग (YS II 3, 7; SK 45), one of the kleśas. It consists in getting attached to that which brings one pleasure. The sentiments which are thus formed are all called rāgas and in this way there are many rāgas in each mind, e.g. love of wealth, delicious dishes, fashionable clothing, wife, children etc.

According to SK, it is the **bhāva²** which is the opposite of **virāga**, hence called *rājasa* रাजस (pertaining to **rajas**) as opposed to **virāga** which is **sāttvika** (pertaining to **sattva**). **Rajas** predominates in the **rāga**.

If we have to think of **rāga** as a single disposition as *Patañjali* seems to do, it

to whatever brings pleasure. This tendency is innate in every living being. rāgadvesa रागद्वेष (BG III 34, XVIII 51), attraction and repulsion. Attraction towards desirable things and repulsion against undesirable things-they are ordained with regard to the objects of all the organs. It is hereby suggested that one should not come under the influence of these two. To achieve supreme consummation of knowledge, one should eliminate the attachment and hatred also besides the other conditions.

would be the tendency to get attached

rājadanta राजदन्त (HP III 21), the front part of the row of the upper teeth. According to one opinion, for performing mahābandha the tongue should be pressed against the front teeth instead of pressing the chin against the chest.

rājadantabila (mūla) राजदन्तविल (मूल) (G 64; HP I 46), the hollow of the saucerlike roof of the mouth. Yogīs are advised to press this spot with the tip of the tongue and meditate upon the goddess who is supposed to be the source of nectar which oozes from that spot.

According to some authorities, for performing **padmāsana** the tongue should be pressed against the hard palate.

rājapatha राजपथ (HP III 3), royal path. When the dormant kuṇḍalinī is awakened, all the centres and knots in the **suṣumnā** get pierced whereby a royal highway for the **prāṇa** is created. **rājamārga** राजमार्ग (GS VI 19), the luminous passage in the brain above the level of the eyes. When **kuṇḍalinī** is aroused and rises above the level of the eyes, it becomes one with **ātmā** and remains there. But even there it is incessantly moving and is not perceptible on account of the rapid fluctuations. Most probably by **rājamārga** Gheraṇḍa here means the **sahasrāra**.

rājayoga राजयोग (GS VII 6, 17; HP I 2, 67, II 74, 76-7, III 122, IV 3-8; YSU I 129, 137, 138; YTU 19, 129; SS V 15). GS mentions six aspects of rājayoga each of which is to be practised. They are (1) dhyāna by śāmbhayi mudrā, (2) nāda by bhrāmarī mudrā, (3) rasānanda by khecarī mudrā, (4) layasiddhi by yoni mudrā, (5) manonmani by bhaktivoga and (6) manomūrchā by murchā kumbhaka, which is also more a spiritually oriented mudrā than anything else. Each of these aspects develops into samādhi by samāpatti in which manas² is the tatstha which merges into tad (cf. P I 41). Each of these aspects of rājayoga ultimately leads to Supreme Realization; viz. "there is nothing except brahman and I am that". In GS VII 17 this is called rājayoga. YTU mentions rājayoga as one of the four kinds of **yoga**, the other three being mantra³, laya and hatha. YSU calls

it an aspect of mahāyoga. Rājayoga, according to SS and YTU, also appears to be another name for the niṣpatti avasthā of yoga, rather than a kind of yoga in itself.

According to YTU, life activity (vavu) is withdrawn from the nine openings of the body as a tortoise withdraws its limbs. Perhaps these nine doors are mentioned only as symbols for the extremities of the body. If consciousness is withdrawn from them by a $yog\bar{i}$ successfully and these doors are thus closed (i.e. sensation and action are both stopped altogether), life activity remains confined in the head to whatever is in the yogi's mind. Withdrawal of vavu in this manner is called nirvāta निर्वात (breathless) kumbhaka in YTU 142. In this state the $yog\bar{i}$ is left with his $\bar{a}tm\bar{a}^2$ and $\bar{a}tm\bar{a}^2$ alone as there is nothing else in his mind.

Rājayoga, according to this *Upaniṣad*, is possible only after success in haṭhayoga is attained (cf. rajas³). HP appears to consider the condition of the individual after Supreme Realization to be rājayoga. It appears that in fact, there is only one yoga which has various components, aspects, phases and stages, each with its own name. This multiplicity of names gives rise to the wrong idea that there are many yogas.

rājayogaphalāvadhi राजयोगफलावधि (HP I 67), until the attainment of the stage of rājayoga. All the haṭhayogic prac-

tices should continue till the rājayoga is attained. Haṭhayoga accepts the rājayoga to be its goal.

rātri रात्रि (HP IV 42), iḍā nāḍī, Rātri is a technical term used for iḍā nāḍī as against divā for piṅgalā. Ātman should not be meditated upon either when piṅgalā is active or even when iḍā is active, i.e., it should be meditated only when both are inactive (i.e. when suṣumnā is active).

rucira-1 रुचिर-१ (ANU 9), kumbhaka. rucira-2 रुचिर-२ (ANU 8), suspension of respiratory as well as mental functions (see Upaniṣadbrahmayogi). After getting rid of the **kilbisas** (taints), the $yog\bar{i}$ is advised to direct his effort towards rucira, which here appears to be a stage even above sūksma dhyāna (meditation on a subtle object) because dhyāna, after all, is a manovṛtti मनोवृत्ति (mental process). Kumbhaka (suspension of breath) is obviously implied in rucira. Rucira seems to be complete state of a praśanta (calm) person. In any case, rucira is not exactly the same phenomenon or state as kumbhaka; because kumbhaka is a prāṇāyāma² while rucira is to be tried after the doşas (sins) are burnt away by prāṇāyāma² and kilbiṣas (taints) by dhāranā.

ruja হল (G 54), disease. Gorakṣa declares that diseases are destroyed by the practice of āsanas, whereas Gheraṇḍa (GS V 57) says that it is through prāṇāyāma the diseases are destroyed.

rudra रुद्ध (GS III 61; BY IX 84), the presiding deity of five elements situated at the navel. Vaiśvānarīdhāraṇā is practised by merging prāṇa along with citta for 2 hours on this fire element in the navel. Due to the act of tearing, roaming, loving and hastening, he is named rudra according to BY.

rudragranthi रुद्रग्रन्थ (VU V 66; HP IV 76), one of the three hurdles in the way of the vāyu which appears to be rising up along the back to the head. This is the highest and the last of the three hurdles located in the bhrūmadhya. What exactly the granthis are, is difficult to say at this stage of our knowledge of ancient Indian Physiology.

rudrāṇi रुद्राणी (HP III 121), śāmbhavī. rūpa-1 रूप-१ (YS III 46), visible form. Beauty of form is here said to be gained as part of perfection of body attained by performing saṃyama on the material side of nature.

rūpa-2 रूप-२ (VB I 45, II 19), one of the five tanmātrās, the subtle matter which takes the form of the element agni (fire). The theory is that this tanmātrā has three qualities of which that which stimulates the eye, predominates not those qualities which stimulate the skin or the ear sparśa and śabda respectively.

rupa-3 रूप-३ (TSB 4), one of the five jaivatanmātras, i.e. the active principles in the sense organs, which are responsible for the sensory function.

Rūpa is the **jaivatanmātra** in the eye, which is stimulated by the corresponding **tanmātrā** in visible objects.

rupa-4 रूप-४ (TSB 6, 9), sight. It is the function of the sense organ cakṣu³ (the eye).

rūpa-5 रूप-५ (ANU 14), one of the five stimuli for the five sense organs. It is the stimulus for the eye and is called its viṣaya⁴. It is the predominant quality of the tanmātrā rūpa. The natural desire to see things (rūpas) is also called cakṣu indriya in Sanskrit and of this also the viṣayas⁴ are rūpas⁵.

rūpagrahaṇa रूपग्रहण (ATU 10), visual perception, which is impossible without the instrumentality of manas (mind) and cakṣu (eye). For seeing the tārakalakṣya (which is a pravṛtti and not a vṛtti) also, the jīvātmā (the individual self) needs the instrumentality of manas as well as of cakṣu. Cakṣu here is the central apparatus necessary for vision-not the peripheral sense organ eye.

rekhātraya रेखात्रय (GS VI 11), the three lines (a, ka and tha) of the mystical triangle ha, la, kṣa which may be imagined (in the state of sthūla-dhyāna) in the pericarp of the twelve-petaled lotus, which in its turn, is imagined in the pericarp of the 1000 petalled lotus. Om is imagined inside this mystical triangle.

recaka-1 रेचक-१ = reca रेच (G 47; HP II 36, 45, 68, 69, 71, 72, 73; VU V 18;

DU VI 13; YCU 101; MBU I (1) 6; BY VIII 9, 10), exhalation-one of the three phases of **prāṇāyāma**², the other two being **pūraka**¹ (inhalation) and **kumbhaka**¹ (retention of breath). It is, however, not necessary that every **prāṇāyāma**² should have all the three phases. For *Patañjali* e.g., **kumbhaka** is **prāṇāyāma**² proper, which may or may not be preceded by inhalation or exhalation.

recaka-2 रेचक-२ (VU V 57-8), driving out all objects, external as well as internal, from consciousness.

recaka-3 रेचक-३ (BY VIII 22), expired air.

recaka-4 रेचक-४ (BY VIII 20, 21, 25, 42), bāhya kumbhaka. Contemplation upon śiva is prescribed in this condition.

recana रेचन (TSM 94, 108), exhalation = recaka.

retas-1 रेतस्-१ (G 65), flow, current. Its direction becomes upwards within two or three years after the body of the yogī becomes full of amṛta (nectar). Retas is generally supposed to be semen and the word ūrdhvaretas has become synonymous with brahmacārī (a celibate person). But in the context of G 63 retas should be taken to be secretion from the upper parts of suṣumnā. Rajas³ is to be raised up by vajrolī mudrā to mix with retas¹. This may help maintaining celibacy; but it seems to be more appropriate to say that this

helps in raising **prāṇa**². It may be that **vīrya** (energy) is needed for that also. **retas-2 रेतस्-२** (YSU I 68, 137), the masculine principle which is supposed to reside in the throat (see *Upaniṣad-brahmayogī*). One aspect of the **yoga** taught by this *Upaniṣad* is union of **rajas**² and **retas**²-of **śakti** and **śiva**. It is here called **rājayoga**.

la-ल

lakāra लकार (GS III 70, V 44), laṃ लं the bījamantra of the pṛthvī (earth) tattva³ (element). Hence the bhaumatattva भोमतत्त्व (earth) which is contemplated in adhodhāraṇā has the letter 'la ल' on it. These single-lettered mantras³ are mystical and it is difficult to say anything about them. The 'la ल' bījamantra is repeated thirtytwo times during samanunāḍī śuddhi when the air is exhaled for the second time, obviously through the right nostril.

lakṣaṇa লম্বল (YS III 13, 53), the condition of an object or a citta²-whether active or niruddha-which results from the object, or the citta² under-going a change between one moment of time and the next moment. This change also is a series of changes. Though the members of this series are not perceptible, or introspectible; yet they are there and are known as avasthās in Patañjali's language. These changes are going on all the time, and in this way, as explained by VB, every lakṣaṇa is a succession of such changes. Thus the

difference between an avasthā and lakṣaṇa is that while the later can be perceived or introspected, as the case may be, the former can neither be perceived nor introspected.

lakṣaṇapariṇāma लक्षणपरिणाम (YS III 13), a pariṇāma made up of a series of avasthāpariṇāmas. A series of lakṣaṇapariṇāmas constitutes a dharmaparināma.

A laksanaparināma is not an object proper but a changed condition in which an object is found when perceived after some time. The perceptibly changed conditions of one and the same object are all called laksanaparināmas. The objects themselves are dharmaparināmas and the imperceptibly changed conditions behind the perceptibly changed ones are avasthāparināmas. In fact the changes take place in kramas of prakrti, which as they are perceived and understood by us are called parināmas by Patañjali. When one object changes into another object, as threads into cloth, there is a dharmapariṇāma. If a piece of cloth becomes old, it is seen as a laksanaparināma and the imperceptibly changed conditions which are constantly arising one after another while the perceptibly changed condition of the object remains the same are avasthaparināmas.

lakṣya লঞ্চ্ব (ATU 7), that which the tārakayogī experiences when he succeeds in his yoga. It may be an antarlakṣya or a bāhyalakṣya or a madhyalakṣya i.e. only a content of consciousness or something localised in the outer world or something which is in the $yog\bar{i}$ and which surrounds the $yog\bar{i}$'s body. The $yog\bar{i}$ finds himself in it.

lakṣyatraya लक्ष्यत्रय (SSP II 26-29), three types of objects (for dhāraṇā). They are antarlakṣya, bahirlakṣya and madhyalakṣya. In the first variety, the objects are internal such as suṣumnā, the atomic flame in kollāṭamaṇḍapa above the forehead, reddish circle in the naso-pharyngeal cavity. 'dhuna' like nāda in the head, blue flame like retina of the eyes.

The second type of objects are external such as blueflame-like object four fingers away from nose, smoke-like vāyu-element eight fingers (below the nose), wave-like water-element ten fingers away from the nose, earth-element with yellow colour twelve fingers away from the nose, ākāśa pervaded with rays, empty space, hot gold-like ground etc. Dhāraṇā on ākāśa makes the citta pure and free from modifications. Gazing the hot gold-like ground makes the gaze steady.

The third type of objects; this consists in having **dhāraṇā** on **bahirlakṣya** in one's own body, these objects are whitish, reddish, black **jyoti**; lightening, sun or moon etc., any object of one's choice. Considering oneself as unattached with objects as such comes under this variety.

laghu-1 লঘু-१ (SK 13), light, not heavy.
Sattva² is supposed to be light, while
tamas² is supposed to be heavy.
Laghutva লঘুনে (lightness) in this context corresponds to immateriality and the indriyas² (sense and action organs) are said to be immaterial because they are sattvika. They are composed chiefly of rajas and sattva and predominance of the latter in them makes them immaterial.

laghu-2 লঘু-২ (HP II 64), quickly, while doing bhastrikā prāṇāyāma², when the practicant feels tired, he is advised to inhale through the right nostril and immediately hold the nostrils with his thumb and the ring and the small fingers.

laghutūlasamāpatti लघुतूलसमापत्ति (YS,

VB III 42), samāpatti on lightness such as that of cotton fibre. This is an alternative means for the attainment of the power like movement in the air. The other means for attaining this power is the practice of saṃyama on the invariable relationship between the body and $\bar{a}k\bar{a}\dot{s}a$ (space). Both the means make a $yog\bar{i}$ very light. Because of this lightness, a $yog\bar{i}$ is said to become able to walk over water, or over spider's web or even over rays of light and gradually he is able to move through the air at will.

laghvāśi लघ्वाशी (BG XVIII 52), one who eats moderately (cf. mitāhāra).

labdhavṛttikleśa लब्धवृत्तिक्लेश (VB II 4), active kleśa. It is not a disposition (a part of the mental structure) which the kleśas are, according to *Patañjali*, but a functioning of the mind prompted by a kleśa (cf. VB).

lampikā लिपका (G 86), one of the nine dhyānasthānas (spots on the body for meditating upon). It is probably the highest of the three parts of the throat (kaṇṭha) below which there are ghaṇṭikā and candra. The yogī however, does not meditate on the uvula, but on the spot somewhere near or inside it in the mouth; although ghaṇṭikā is uvula.

lambikā लम्बिका (GS I 31, III 22), the tongue. If one cuts the frenum under the tongue and then regularly practises moving the tongue upwards, the tongue gets longer and longer till it reaches the spot under the eyebrows. Then ensues khecarī.

laya-1 लय-१ (YTU 19, 23; KU 23), becoming a void. Obviously it is not the layasiddhi of Gheraṇḍa (V II 5), which is a state of rājayoga brought about by success in yonimudrā or laya of VU. It is more like the laya of Patañjali's prakṛtilayatva प्रकृतिलयत्व which is absence of all cittavṛttis or cetana- an obliteration of the whole being of citta². Layasiddhi of GS and VU is the merging of citta in the object of concen-

tration as in *Patañjali's* samāpattiwhile laya of these (TBU and KU) *Upaniṣads* is citta² becoming a void. It is compared to the extinction of a candle when it has spent itself.

laya-2 लय-२ (VU V 10, 75), one of the three stages of yoga, the other two according to this *Upaniṣad*, being haṭha and mantra³. Laya is the opposite of haṭha. While haṭha is predominantly of the body and is gross, laya is subtle and much deeper than haṭha. Nothing more is said about layayoga. The niṣpatti stage of yoga is described as laya of jīva in brahman and is called the state of jīvanmukti. This shows that this laya is not a permanent merging but a state which lasts for a longer or shorter period. All the same, it illumines the soul.

laya-3 लय-३ (HP IV 33), getting merged in, becoming one with.

laya-4 लय-४ (HP IV 3, 29, 31-2, 34, 80, 103), rājayoga, samādhi.

layasiddhi लयसिद्ध (GS VII 5), one of the six states of rājayoga mentioned by Gheraṇḍa. It is attained by yonimudrā. Adopting the yonimudrā pose, the yogī takes himself to be the śakti which is to unite with śiva and thus enjoy bliss.

lalāṭa ললাত (VS III 73), forehead. One of the eighteen vital points. It is three fingers above the middle of the eyebrows.

lāghava লাঘৰ (GS I 9, 11), feeling of lightness-one of the seven achievements of haṭhayoga. The means by

which this is attained is **prāṇāyāma**². By virtue of this the $yog\bar{i}$ feels as if he is suspended in air. Pranava (= prāna² $= v\bar{a}yu$) rising to the head may or may not bring about actual reduction in weight. But it does create this feeling. linga-1 लिंग-१ (SK 20, 40), the transmigrating entity, ordinarily known as the soul. It appears that according to \bar{I} śvarakrsna only karanas² (senses etc.) are the constituents of linga¹. Linga1 is thus the śanta viśesa which carries the bhāvas2 with it. This view tallies with Patañjali's idea of citta¹, which is all aindriya, being taken from one body to another and with the $G\bar{i}t\bar{a}'s$ view that the senses and the manas1 which are prakrta (pertaining to prakṛti) go along with the transmigrating soul.

linga-2 लिंग-२ (YCU 72; BY II 135), subtle body. According to YCU, it consists of the ten subtle indrivas¹, five objects of sense, five vāyus, manas and **buddhi**. This **linga**² is called one of the three bodies of man, the other two being sthula and karana śariras. Linga² is sūksma (subtle) as compared to sthūla prakṛti which is gross. It appears to be the same as linga¹, though it is not mentioned that this body transmigrates, nor is it called kārana. linga-3 लिंग-३ (SK 10, 41), vyakta, which does not actually exist, except in the form of gunaparināmaviśesasparticular individuals differentiated in

it; i.e. the sūkṣma, ghora and mūḍha viśeṣas.

liṅga-4 लिंग-४ (SK 5; YSU II 9-10), mark of anything (cf. liṅgin²). In YSU om is called liṅga⁴, because it is the symbol which stands for brahman. It is itself sometimes said to be the Supreme Reality.

liṅga-5 लिंग-५ (HP IV 42), ātman, brahman, meditation of whom is here prescribed in the state of kumbhaka.

lingadeśa लिंगदेश (G 22), the region of sexual organs. The kuhū nāḍī runs from the kandayoni, from where all the nāḍīs originate, to this region.

liṅgadhārī लिंगधारी (SSP VI 44), whose mind is completely merged along with all the component elements of the body, a devotee of Lord śiva.

lingamātra लिंगमात्र (YS II 19), the Sānkhya mahat. Patañjali considers it to be one of the four gunaparvas (levels of differentiation) in prakṛti. VB distinguishes between vyavasāyātmaka व्यवसायात्मक and vyavaseyātmaka व्यवसेयात्मक lingamātra, which correspond to SK's vaikrtāhankāra and bhūtādi respectively. Patañjali does not use the word ahankara in any of his sūtras. Lingamātra is the first differentiation in alinga, which is perfectly indeterminate prakṛti. In lingamātram or mahat are differentiated the tanmātrās and asmitā, which are at the aviśesa level according to VB's explanation of Patañjali's Sūtra.

lingaśarira लिंगशरीर (VS V 13), causal body. According to Indian thought, there are three causal bodies-iśvara, ātman and prakṛti.

lingin-1 लिंगिन्-१ (ABU 19), one who knows the brahman. The knowers of brahman differ from one another as do cows of different colours; but their knowledge (the knowledge of brahman) is the same as the milk of all the cows is of the same colour.

liṅgin-2 लिंगिन्-२ (SK 5), that which has a particular mark, liṅga⁴ being the word for mark. We infer either what has the mark from its mark, or a mark from that which has that mark.

loka-1 लोक-१ (YCU 72), deva (God), tiryak (animal), nara (man), or sthāvara स्थावर (stationary living being). These are the four varieties of life which constitute one of the three sargas-the bhautikasarga-according to Īśvarakṛṣṇa (SK 53).

loka-2 लोक-२ (VB I 49, III 17), worldly, ordinary, of people in general; e.g. *loka-pratyakṣa*, lokabuddhi.

loka-3 लोक-३ (VB III 26), the various worlds; e.g. janoloka, tapoloka etc.

lobha लोभ (YSH IV 6; YS II 34), according to YSH, one of the four kaṣāyas कषाय, the other three being krodha, māna मान (pride) and māyā. Lobha is said to be the repository of all the doṣas, destroyer of all the guṇas and root of all the troubles. There is no end to lobha. It is icchā (desire) which goes

on increasing as it is being satisfied (rāgāt rāgo vardhate रागत् रागो वर्धते). Its only antidote is santoṣa. According to Patañjali, hiṃsā (causing pain to others), which is the opposite of one of his yamas (restraints), is like other vitarkas motivated by lobha, krodha and moha. Lobha can be rendered in English as greed.

lauliki लोलिको (GS I 12), one of the ṣaṭkarmas which is said to consist in moving the abdomen with force from one side to another. It is obviously the same exercise as is ordinarily known as naulī. It is not described by GS in greater details. Of course it would not be possible without some kind of uḍḍiyāna (rising the diaphragm), though not exactly what Gheraṇḍa calls by uḍḍiyāna¹.

laulya लौल्य (HP I 15), fickleness of mind, which undoes all yoga.

va-व

vaṃ चं (GS V 44), the bīja which a yogī is advised to recite mentally sixtyfour times while performing kumbhaka (stopping of breath) for the third time in the process of samanunāḍīśuddhi. It is a monosyllabic mystic formula with an anusvāra अनुस्वार at the end.

vaṃśināda वंशीनाद (GS V 74; HP, IV 86), one of the internally aroused sounds heard by the yogi who is successful in performing bhrāmarī kumbhaka. This sound is like that of a sweet sounding flute.

vakra वक्र (BY IX 10), vibratory. The four

syllabled **omkāra** is vibratory in the initial stage.

wacana वचन (SK 28; TSB 6), expressing what is in one's mind-a thought, a feeling, or a wish- by bodily activity mainly by speaking. It is the function of vāk which according to TSB, is an aṃśa (part) of pṛthvī (earth). Hence vacana is said to be a kārya (function) of pṛthvī.

According to SK, **vāk** has to do with sound and sound alone. In this way **vacana** would consist only in making a vocal sound for communication with others.

vajrakumbha व्यक्तमा (BVU 75), a class of kumbhaka. *Upaniṣad-brahmayogī* explains that some varieties of kumbhakas such as sūryabhedana, ujjāyī, śītalī are understood to be vajrakumbhakas.

vajradarpaṇa वज्रदर्पण (MBU II (1) 10), one of the visions which when seen by a yogī points to his success in śāmbhavīmudrā. It is a light like forked lightening which yogī sees as a divyarūpa or divine light (cf. VB III 36).

vajrāsana-1 वज्रासन-१ (GS II 3, 12), one of the thirtytwo āsanas¹ described by Gheraṇḍa. It consists in flexing the legs hard and placing the two feet by the two sides of the anus.

vajrāsana-2 वज्रासन-२ (HP I 37, III 110-11; YKU I 4, 6), one of the only two āsanas¹ recommended in YKU, the other being **padmāsana**. According to YKU, it consists in placing the left heel below the **mūlakanda**- central part of the pelvis-and the other above the left foot and the neck, the back and the head being kept in line.

According to HP, guptāsana, muktāsana and vajrāsana² are the other names of siddhāsana which it explains as follows: "fix the left ankle above the penis and the other ankle over that".

vajrolī-1 वज्रोली-१ (GS III 2, 39), one of the twentyfive mudrās mentioned in this text. It consists in resting the two palms on the ground, raising the feet and the head in air. It aims at awakening of the kuṇḍalī¹ and prolonging of life. This mudrā is also said to bring liberation, to facilitate bindusiddhi and to bring every success to a yogī

vajroli-2 वज्रोली-२ (SS IV 78, 80), sucking up semen back again after a sexual act. vajroli-3 वज्रोली-३ (HP III 6, 82, 84, 90, 93, 95, 97, 99, IV 14), one of the ten mudrās mentioned in this text. It consists in raising the secretions of the pelvic region by appropriately contracting and manipulating the inner organs situated in this region. As the fluid poured from the suṣumnā begins naturally to flow downwards, it is preserved by exerting an upward pull in the manner explained above. The practice of this mudrā is said to conquer death, i.e. break the cycle of birth and death.

vamanadhauti वमनधौति (GS I 39), filling

the stomach and the gullet with water after a full meal and vomiting it out. This is to be done about three hours after eating, though this precaution is not mentioned by *Gheraṇḍa*.

If one practises this **dhauti** regularly one does not suffer from any **kaphadoşa**.

varaṇaka वरणक (SK 13), that which restrains, causes obstruction (cf. tamas). varaṇabheda वरणभेद (VB, VM IV 3), separation of the covering. The cause is never generated by the effect. It happens simply by the separation of the covering. Just as farmer does not draw the water with his own hand in order to irrigate it but simply cuts its resistance and when that is set off, the water itself overflows the different plot of lands-similarly, virtue separates vice which is the covering of the intensive causes.

varaṇā वरणा (VS II 22, 32, 35), one of the fourteen important nāḍis. This is situated between yaśasvini and kuhū and it stretches in the body below and above everywhere.

varuṇa-1 वरुण-१ (TSB 8), one of the twelve presiding deities (gods), active in the twelve principal nāḍīs² as the ten prāṇas.

varuṇa-2 वरुण-२ (DU IV 7, 16, 36), one of the fourteen principal nāḍis. It is situated between yaśasvini and kuhū. Vāyu is here said to be its presiding deity.

vareṇya वरेण्य (BY IX 42, 44, 51, 56),

effulgence of **savitṛ** is technically known as **vareṇya**. This is supposed to be the guiding principle for intellect known as **cidātman**.

varṇa-1 वर्ण-१ (GS V 48, 50-1; G 77), letter of the alphabet. The rajoguṇa brahman is represented by the red "a" (अ), the sattvamaya (full of sattva) hari by the blue "u" (उ) and the tamomaya (full of tamas) śiva by the white "m" (म्).

varṇa-2 वर्ण-२ (G 91), colour. A clean crystal shines in its colourless beauty. It is seen as of different colours if its whiteness is covered by a coloured object which it reflects. Similarly, ātmā is seen in His purity when meditated upon as separated from His śakti which is his māyā.

varṇa-3 वर्ण-३ (G 89), quality, here guṇa. Atmā with His śakti is explainable with reference to His qualities and forms which the guṇas take. Atmā and ātmā alone cannot be explained in any such way. Hence all the words referring to Him as such are negative (cf. śakti-5).

varṇatraya বর্ণার্য্য (VS III 3-9), three letters, A, U, and M, representing the whole devanāgari alphabets. A is the foremost syllable, whereas M is the concluding syllable of the group. U denotes the first deformation in the devanāgari alphabets.

varṇalina वर्णलीन (BY IX 12), oṃkāra, the essence of all letters. Though it is beyond letters, yet it is the life principle behind each letter, hence it is called varṇalīna.

vartamāna वर्तमान (VB IV 12), present = existing. In respect of adhvabheda (difference of time) dharmas are divided into three kinds; atīta, anāgata and vartamāna. All of these dharmas are real according to Patañjali. The atīta dharmas exist in the form of dispositions which affect the vartamāna and the anāgata ones as potentialities. This is how VB explains the reality of the past and the future.

varṣā বর্ষা (GS V 8, 11), the monsoon weather. Beginning of strenuous **prāṇāyāma** is prohibited in this season. It may tell on one's health. Middle of June to middle of August are supposed to be the rainy months.

vaśi वशी (HP II 1), one who has subdued one's passions. Svātmārāma considers it as one of the essential prerequisites for the practice of prāṇāyāma. Passions may work as a great hindrance in the practice of prāṇāyāma. Therefore vaśi is the prerequisite.

vaśikāra-1 वशीकार-१ (YS, VB, VM, VBh I 15), a variety of vairāgya (detachment). Absence of greed towards objects seen and heard is called vaśikāra vairāgya. Detachment from visible objects mean detachment from women, food, drink and power etc. Detachment from heard things is detachment from attainment of heaven, etc. It is the fourth

and last in sequence of the stages of vairāgya.

vaśikāra-2 वशीकार-२ (YS, VB, VBh I 40), mastery, complete control. Such a citta reaches from smallest atom to the object of the greatest magnitude.

vasanta वसन्त (GS V 9, 12, 15), one of the two seasons in which the practice of yoga should begin, the other being śarad. It covers the months of caitra चैत्र and vaiśākha वैशाख i.e. from the middle of February to the middle of April; but its influence spreads over four months, i.e. from the middle of January to the middle of May.

vasti बस्ति = basti बस्ति (GS I 12, 43, 45; HP II 22, 27-9), one of the ṣaṭkarmas (six performances). It is of two kinds; jalabasti (with water) and śuṣkabasti (without water). Jalabasti consists in sitting in the posture known as utkaṭāsana in water coming up to the navel and relaxing and contracting the anus in the course of practising madhya naulī.

This **basti** is supposed to cure urinary diseases, disorders of digestion and wind in the stomach, as also to purify the body and make it like that of cupid *kāmadeva* कामदेव. Dry **basti** consists in assuming the supine position, folding the legs on the body, trying to move the contents of the intestines downwards and contracting and relaxing the anus. It cures all the abdominal diseases, increases the gastric heat and destroys the disorders of the bowels.

vastu-1 वस्तु-१ (YS IV 14-15), an individual object. Every individual object is a single pariṇāma. The pariṇāma is the object as known; nevertheless, the object is not only in the mind of the person who knows. Every object corresponds to a krama and there is no pariṇāma without a krama. Some reality out there is known as an object. Every object is in this way an objective reality.

vastu-2 वस्तु-२ (TBU I 49, 50), substancehere the one ultimate Substance = brahman.

vastumātrātmaka वस्तुमात्रात्मक (VB III 15), (of the nature) of the substratum only. Out of the characteristics of mind, the unperceived one has the nature of substratum only, i.e., latent impressions of objects only (cf. pratyayātmaka). vahni-1 विह्न-१ (GS III 61; YTU 92; G 71), one of the five tattvas² (elements) on which contemplation is prescribed in five dhāraṇās. This tattva³ is supposed to reside in the nābhi (navel) and to be red like an indragopa (a bright red insect). Its bīja is surrounded by the

rudra. In the course of samanunā $\dot{q}i^2$ śuddhi, when the $yog\bar{i}$ performs pūraka for the second time, he is advised to recite the vahnibīja mentally for sixteen times and to raise this tattva³

lines of a triangle. It resembles the

effulgent sun and its presiding deity is

G places this element in the palate.

from the navel.

Vahni literally means fire.

vahni-2 विह्न-२ (HP III 45, IV 18), ordinary fire.

vahni-3 विह्न-३ (HP III 48, 66), heat.

vahnijaya वहिनजय (G 71), control over element of fire attained by vaiśvānarī-dhāraṇā.

vahnibija बह्निबीज (DU V 9), agnibija अग्निबीज (V 8), seed of fire. *Upaniṣad-brahmayogi* considers *raṃ* to be the seed of fire. *Vasiṣṭha* also considers *raṃ* to be the seed of fire (VS IV 8).

vahnimaṇḍala-1 विह्नमण्डल-१ (GS I 44), the digestive system. Mūlaśodhana improves the health of the digestive system, which is here called vahnimaṇḍala- literally the sphere of vahni (digestive heat).

vahnimaṇḍala-2 বিদ্লিম্যন্ত-২ (HP III 65), the navel region. When apāna rises up and reaches this region of fire, the flames of the fire blaze forth, fanned by the vāyu (apāna).

This is an allegorical description of the effect of what is here called **apāna**, rising up along the back to the navel region. Blazing up the fire signifies intensity of sensation.

vahniśikhāmaṇḍala বদ্ধিগিয়েলাদ্যন্ত (MBU II (1) 10), one of the visions seen by a yogī when he is about to attain success in śāmbhavīmudrā. It is like a ring of yellowish flame surrounding a white light. This vision is a sign of mental stability which is attained by perfection in śāmbhavīmudrā.

vahnisāra विद्वसार (GS I 14), agnisāra. vahnisthāna-1 विद्वस्थान-१ (YTU 91), the seat of vahni (fire element) which is said to extend from the anus to the chest.

G places the fire element in the region of the palate (G 71), GS in that of navel (III 75-6).

vahnisthāna-2 विह्नस्थान-२ (VS III 36, IV 6), the region of fire. *Vasiṣṭha* considers the region from anus to heart to be the place of fire (igneous spot).

vahnisevā विह्नसेवा (GS V 26), agnisevā. vāk-1 वाक-१ (SK 26, 34), the karmendriya of speech. It is not the tongue or any other vocal organ. It is sūksma, i.e. imperceptible. It is an indriva of which the vrtti (function) is vacana (speech). According to SK, vak has to do with sound and sound alone and vacana can thus stimulate only one sense organ, viz. the ear. The vrttis of the other karmendriyas can, on the other hand, stimulate all the sense organs. In this way vacana would consist only in making sounds which are heard by others. The vrttis of the other karmendriyas, on the contrary, can be heard, felt (touched), seen, tasted or smelt in the sense that what one does by means of these indrivas can be perceived in any of the five ways. It is, however, rather difficult to imagine how behaviour can be tasted.

vāk-2 वाक्-२ (SSP I 60), one of the five components of vyaktiśakti-pañcaka.

The five varieties of speeches are parā, paśyanti, mdhyamā, vaikhar \bar{i} and $m\bar{a}trk\bar{a}$.

vācakavācya বায়কবান্থ (TSB 4), one of bhūtabhedavibhāgas = bhūtavikāravibhāgas भूतविकारविभाग (multifarious differentiations in the elements) which are responsible for all the diversity in creation. Vācakavācya vibhāga is the differentiation between an object and its name.

vācika वाचिक (DU II 13; SAU I 10), word uttered verbally. Japa uttered by mouth is of two types-uttered in low pitch and high pitch. However, the word uttered in low pitch is thousand times better than uttered in high pitch.

vāta-1 वात-१ (SS I 85), the mahābhūta vāyu.

vāta-2 वात-२ (SS I 47; VB III 22), the air, or the wind, which blows. It dries up wet clothes, fans a fire, and so on.

vāta-3 বান-২ (HPII 2), breath = respiration. The body and the mind are active so long as one breathes. If breathing ceases every activity ceases.

vāta-4 वात-४ (HP II 28, 65, V 12), one of the humours of the body. We use the English word 'humours' but the Ayurvedic vāta, pitta and kapha are very different from the humours of the ancient Greeks. While the Greeks believed in four humours, which were all liquid or semiliquid, the ancient Indians thought that there were only three. The latest Indian Ayurvedic opinion does

not favour the idea that **vāta**, **pitta** and **kapha** are substances like blood, bile and phlegm.

vāta-5 वात-५ (HP II 50, V 1, 18; VB III 29), any disease caused by a malfunction of vāta⁴.

The ancient Indian pathologists placed all human diseases in three groups, which they called disturbances of vāta, pitta and kapha. The diseases of nervous origin and those resulting in digestive disturbances characterised by formation of gas in the stomach and intestines are generally diagnosed as vāta doṣas. According to ancient Indian pathology, however, every disease necessarily involves a vāta doṣa. There are no purely pitta or purely kapha diseases.

vāta-6 বান-६ (HP IV 114), the cutaneous sensation which the *yogīs* perceive as something rising up their back. It is here called **prāṇavāta** and success in **yoga** is said to consist in being able to control this sensation and to retain it in the head.

 $v\bar{a}ta$ -7 वात-७ (HP V 3), $v\bar{a}yu^5$.

vātakrama वातक्रम (GS I 54-56), one of the three techniques of bhālabhāti. It consists in drawing the air in through the iḍā and expelling it through the piṅgalā and again drawing in through piṅgalā and expelling it through iḍā in a rapid manner.

vātasāra वातसार (GS I 14, 16), one of the four kinds of antardhautis, the other

three being vārisāra, vahnisāra and bahiṣkṛta. It consists in swallowing air slowly by protruding the lips like a crow's beak, moving that air in the stomach and then expelling it slowly by way of the anus. This is supposed to cleanse the body, cure all diseases and improve the digestive ability.

vātasthāna वातस्थान (HP V 3), region of vāta, extending to the navel.

vānaprastha वानप्रस्य (SSP VI 36), one who is always stable in the inner light of one's own internal world is supposed to be a man undergoing vānaprastha. This interpretation is in accordance with Nātha cult. It opposes virtually going to the forest and living there like an animal

vāmakrama वामक्रम (GS I 54), one of the three methods of performing bhālabhāti. Vāmakrama bhālabhāti consists in slowly inhaling through the left nostril and exhaling through the right, then again inhaling through the right and exhaling through the left. It is supposed to cure kaphadoṣa (any disease arising from a disorder of phlegm). However, in Kaivalyadhāma edition the word vātakrama is used in the place of vāmakrama.

vāmadeva वामदेव (VU IV (2) 34, 35, 36, 41), one of the two kinds of aspirants of liberation, the other being śuka. The divison is based on the speed with which they proceed towards liberation. The vāmadeva is the slow aspirant. He

has to go through a number of deaths and births before he is finally liberated. He follows the paths of **yoga**, **Sāṅkhya** and **karma** with devotion, life after life and then succeeds.

vāyavaḥ वायव: (SK 29; BY VIII 53), prāṇa, apāna, udāna, samāna and vyāna are generally referred to when this word is used. They are described by SK as sāmānyakaraṇavṛtti (joint function of all the karaṇas). Vyāsa describes them as samastendriyavṛtti समस्तोन्द्रियवृत्ति (function of all the indriyas) (III 39). They are the functions of the indriyas in general, none of them being a specific function of any particular indriya.

In all, there are ten such vāyus, prāṇa etc. mentioned above are the five principal vāyus: while nāga, kūrma, kṛkara, devadatta and dhanañjaya are second in rank. The most satisfactory interpretation of the term vāyavaḥ (in general) is that they are reflex actions brought about mainly through the agency of the autonomic nervous system.

BY prescribes a suspension of these functions. Many writers consider the state of **samādhi** to be a condition like that of a log of wood.

vāyavī-1 वायवी-१ (G 72), one of the five dhāraṇās. The object or the content of this dhāraṇā is the mahābhūta (element) vāyu (air) which is here said to be circular in form. The yogīs who

succeed in this **dhāraṇā** are supposed to acquire the **siddhi**³ (special ability) known as **ākāśagamana** (floating in air). They are said to fly without wings and move about in air (cf.**dhāraṇā** and **vāyavīdhāraṇā**).

vāyavī-2 वायवी-२ (NBU 6), the second part of the *caturmātrā* (having 4 parts) oṃkāra.

vāyavīdhāraṇā वायवीधारणा (GS III 62; G 72), one of the five dhāraṇās. It consists in concentrating the prāṇa and the citta (mind) in the seat of this sattvamayatattva (air) for two hours. The practice of this dhāraṇā is said to enable the yogī to fly in the air. it is also supposed to conquer old age and ever recurring death. The element air is called by GS sattvamayatattva and is described in both these texts as dark in colour. In GS it is compared to dense smoke. G places it (inside) between the eyebrows.

vāyu-1 वायु-१ (VB III 39; SK 29; G 25; GS V 64; SAU I (4) 1-12; DU IV 24), reflex activity (functions of the autonomic nervous system). Ten such functions are enumerated- five prāṇādyāḥ vāyavaḥ and five nāgādyāḥ. Sometimes language is used which shows that the vāyus operate the action organs, and it appears that they are nervous phenomena. But both SK and VB describe the five vāyus as vṛttis (actions) and call them sāmānyakaraṇa vṛttis and samastendriya vṛttis

(function of all the **indriyas**) respectively which shows that they are more like **karmendriya** functions than like nerves or nervous phenomena. Understanding the **vāyus** as reflex functions (the specific reflexes) will explain satisfactorily most of the texts dealing with them.

vayu-2 वायु-२ (GS V 39; YTU 95; G 72), the sattvamayatattva (element) which is the object (content) of vavavi dhāraṇā and of which the bīja is "yam यं". In the human body this tattva is supposed to reside inside between the eyebrows, though Gheranda has not mentioned this. It is supposed to resemble collyrium. The presiding deity of the dhvānasthāna (centre for meditation) where this tattva2 resides is iśvara. According to YTU also, vāyu is one of the five bhūtas (elements) in the body on which dhāranā is prescribed. Its seat in the body is said in this Upanisad to extend from the chest to the middle of the eyebrows and it is said to be hexagonical in shape and black in colour.

vāyu-3 वायु-३ (YTU 37, 41, 49, 50, 52, 96, 97; DU IV 40, VI 3, 12-3, 23-7, VII 10-11; HP II 3, 12, 15, 72, III 9, 27, V 7), air which is breathed in and out, respiration.

vāyu-4 वायु-४ (DU VI 31, 36, 40, 42. 43, VII 5; YKU III 7-8, 13; HP II 3, III 26, 65, IV 14, 16, 19, 52, 72), the **prāṇa** which can be taken to any part of the body and held at this spot or that. When carried to the head it rises along the suṣumnā (in the spinal cord). Carrying it to the top of the head *Gheraṇḍa* calls nabhomudrā. *Bhoja* uses the word udghāta for it. This achievement is very much praised and sometimes equated with kuṇḍalinī. All this is, however, a matter of centrally aroused experience.

vāyu-5 वायु-५ (TSM 139, 144), one of the five divisions of the human body, each division being called by the name of a mahābhūta. The vāyu region extends according to this text, from the navel to the nose. This region is, therefore, called vāyusthāna.

vāyu-6 वायु-६ (DU IV 36), the deity called vāyu.

vāyu-7 वायु-७ (HP III 71, V 1-2, 7, 9, 11 18), **vāta**⁴.

vāyu-8 वायु-८ (SSP I 41), one of the five gross elements having five characteristics of running, jumping, expansion, contraction and controlling.

vāyujaya वायुजय (VS III 35), control of breath. Vasiṣṭḥa gives a particular technique for controlling the air. The technique is as under-after restraining forcibly all the senses from their objects and drawing the apāna upwards, a yogī should retain it at the place of fire, then one should close ear etc. sense organs by both hands which produces a peculiar variety of sounds. Through this the vāyu is conquered.

- vāyudvāra वायुद्धार (ANU 26), door of vāyu. Second in the series of the seven doors recognised by ANU leading to the attainment of Ātman. This door of vāyu leads to the attainment of Sūtra. Since Vāyu is conceived as having form of Sūtra.
- vāyudhāraṇā वायुधारणा (G 72; YTU 96), the dhāraṇā of which the content is vāyu. It consists in taking prāṇa⁴ to the region of vāyu⁵ and retaining it there for two hours, contemplating upon īśvara, the omniscient.

G calls it **vāyavīdhāraņā** and prescribes the taking of **citta** to this spot along with **prāṇa**.

- vāyurabhyāsa वायुरभ्यास (VU V 46-7), raising vāyu⁴ regularly and systematically. Here vāyu⁴ signifies prāṇa⁴. This rise is brought about by the practice of uḍḍiyāna¹ and, in its turn, intensifies the heat in the body. The heat helps digestion and thus nourishes the dhātus (essential ingredients of the living body). This leads to some kind of realization as a consequence of which all sins are washed away.
- vāyuveginī वायुवेगिनी (NBU 9), the fourth of the twelve mātrās of om. The mantrayogī who dies when he is reciting this mātrā (of the praṇava) is reborn as a gandharva गन्धर्व (celestial musician).
- vāyusakhā वायुसखा (VS II 18), a synonym for fire.
- vāyusthala वायुस्थल (VS IV 7), region of

- vāyu considered by *Vasiṣṭha*, from the middle of the heart to the middle of the eyebrows.
- vārāṇasī वाराणसी (DU IV 48), one of the seven internal vital spots.
- vārisāra वारिसार (GS I 14, 18), one of the four kinds of antardhauti. It consists in drinking water to capacity (literally up to the throat), moving the stomach slowly and then expelling it by way of the anus. This dhauti cleanses the body and makes it lustrous. Some practising yogīs call it śaṅkhapraksālana.
- vāruṇa वारुण (YTU 89; ANU 30), the region of the element water in the body, on which vāruṇīdhāraṇā is prescribed.
- vāruṇi-1 वारुणी-१ = vāruṇa वारुण = varuṇa वरुण (YSU V 26; VU V 24; SAU I (4) 11), one of the principal nāḍis. Its function is said to be urination and it is said to be situated between kuhū and yaśasvini.
- vāruṇī-2 वारुणी-२ (G 70; HP V 16), one of the five dhāraṇās. The object (context) of this dhāraṇā is the mahābhūta (element) ambu अम्बु (water), which is compared to the eighth moon, and the jasmine flower and is supposed to reside in the kaṇṭha (throat). It is filled with pīyūṣa (nectar) and graced by god viṣṇu.
- vārtā वार्ता (YS, VB III 36), supernormal power of smell. As a result of the practice of saṃyama on svārtha, there arises supernormal powers in sense

organs. Due to **vārtā**, there is knowledge of divine smell.

vāsanā वासना (YS IV 8, 24; HP IV 22, 34; BY II 43), acquired mental disposition in which conation predominates. The arousal of a vāsanā is its abhivyakti अभिव्यक्ति (manifestation) which is called smṛti (revival) by Patañjali in IV 9. Vāsanā itself abides in the form of a saṃskāra (disposition) and a disposition and its arousal naturally correspond to each other. This is their ekarūpatva (similarity). Reference in IV 8 is to the vāsanās formed in previous lives, to which corresponds their arousal in a subsequent life.

The many rāgas and dveṣas formed according to the law called rāgadveṣa by Patañjali are vāsanās; but the law itself is innate. So is the kleśa abhiniveśa. It is not a vāsanā in the strict sense of the word; though Patañjali has included it among vāsanās in support of his statement that some vāsanās are beginningless.

vāsudeva वासुदेव (ABU 22), God in whom everything resides, i.e. who supports everything and who is all pervading brahman.

vāsodhauti वासोधौति (GS I 35, 39), swallowing a soft cloth measuring four fingers in width and nineteen to twenty-five cubits in length and then vomitting it. The person who does this regularly does not suffer from any stomach trouble, fever, enlarged spleen, leprosy,

respiratory disease or liver disease and acquires more and more stamina everyday.

vi a (G 62), bird-here swan. Vi is the first part of the word viśuddha. The second part-śuddha-means pure. Viśuddha-cakara in the kantha is so called because it is pure like a swan which is unaffected by the water in which it swims.

vikaraṇabhāva विकरणभाव (YS III 48), extra-sensory-perception. This ability is said to be acquired as a result of practising saṃyama (deep meditation) on the various forms of immaterial nature.

vikalpa विकल्प (YS I 6, 9, 42), concept, meaning of a word. The śabdārthajñā-navikalpāḥ: (word, meaning, knowledge and concept) which characterise a savikalpa or a savicārā samāpatti, are associated ideas which are the vikalpas corresponding to the various parts and aspects of the object of contemplation.

vikāra-1 विकार-१ (G 9, 54), disorder. In the ninth verse reference is to the dearrangement of any urge of the body which is cured by practising padmāsana. Mental aberrations are, however, said to be cured by pratyāhāra.

vikāra-2 विकार-२ (VB III 13), product, change. A product can never be permanent. Though the substratum is permanent, the qualities undergo a variety of change due to interaction. Thus all the

products of **prakṛti** are impermanent because they have a beginning.

- vikārakāraṇa विकारकारण (VB II 28), cause of change. One of the nine causes. The cause of change is an object that modifies the mind.
- vikṛti विकृति (SK 3), formation, matter assuming a form. All forms of vyakta (manifested nature) are vikṛti; avyakta (unmanifested nature) are not, It is only prakṛti (that which is the matter of every form).

Vikṛti which is not **prakṛti** (a material cause of anything) is called **vikāra**. It is in the act of formation (*prasavasañcāra* प्रसव-संचार) that differentiations appear.

If A differentiates into B, C and D, i.e. B, C and D appear in it, then A is **prakṛti** in relation to B, C, and D which are its **vikṛtis**. **Prakṛti** and **vikṛti** are thus relative terms. **Avyakta** is **prakṛti** in relation to **vyakta**. **Mahat** is **prakṛti** in relation to **ahaṅkāra** and **ahaṅkāra** in relation to the **indriyas**. **Avyakta** is not **vikṛti** in relation to any **prakṛti** and the **vikāras** are not **prakṛti** in relation to any **vikṛti**.

vikṣipta विश्रिप्त (VB I 31-2), one of the five bhūmis of citta. It is the ordinary state of attention in which one is more conscious of some objects and less of others; i.e. some ideas occupy the locus of consciousness while others flit about in the margin.

vikṣepasahabhuvaḥ विक्षेपसहभुव: (YS, VB

I 31), accompaniment of vikṣepas which are: duḥkha (pain), daurmanasya (dejection), aṅgamejayatva (unsteadiness of the body) and śvāsapraśvāsa (inhalation and exhalation).

vigraha विग्रह (G 8), the body. It is to be held erect while performing siddhāsana.

vighna विघ्न (TBU I 40, 41; YKU 1 61), obstacle. Nine vighnas in the way of samādhi are enumerated in TBU, as nine antarāvas (hindrances) are mentioned by *Patañjali*. The **vighnas** of this text are anusandhānarāhitya, ālasya, bhogalālasā, laya, tamas, viksepa, teja, sveda and $\delta \bar{u} nyat \bar{a}$, (absence of) bhāvanās. YKU mentions ten vighnas (hindrances) viz. abhyāsatyāga अभ्यास-त्याग (abandonment of practice), samśaya (doubt), pramattatā (delusion), ālasya (indolence), nidrā (drowsiness), virati विरति (disinterestedness), bhrānti visaya (object of affection or concern), anākhya (inability which cannot be described) and yogatattvālabdhi योगतत्त्वालब्धि (not understanding the essentials of yoga⁴).

vicāra विचार (YS I 17, 44), sūkṣma (subtle) viṣaya⁴ of samāpatti (merging the citta-mind-in the object of consciousness). According to VB, with the exception of the five mahābhūtas and their modifications, all the guṇaparvas are the subtle objects referred to.

vicāraṇa विचारणा (VU IV I 3, II 1, 4), investigation. Second in the series of

seven stages of knowledge. Vicāraṇā consists in proneness to good conduct, preceded by steady application to the study of śāstras, the company of virtuous people and the practice of vairāgya or detachment.

vicārānugata विचारान्गत (VBh I 17), accompanied by reflection. Second in the four stages of samprajñāta yoga. Samprajñāta accompanied by reflection is the direct perception of the essence of the subtle object. After vitarka comes vicāra wherein, in the same support, the mind is able to directly perceive the subtle aspects of the object such as prakṛti, mahat etc.

vicchinnakleśa विच्छित्रक्लोश (YS II 4), a kleśa (innate psychological disposition) which is neither udāra (aroused at the moment) nor prasupta (perfectly inactive), nor tanu (weak). It is inactive for the time being. But vicchinna does not mean "repressed" in the psychoanalytic sense, as it may be aroused the very next moment. It is only temporarily suppressed and has not gone deep into the unconscious.

vijana विजन (TBU I 23), seclusion.

vijṛmbhikā विजृम्भिका (HP II 54), exhalation, which is to be done through the nose for sitkāri prāṇāyāma.

vijñāna विज्ञान (SK 2), knowledge. It includes philosophical understanding.

vitarka-1 वितर्क-१ (YS I 17, 42, 43), sthūla (concrete) viṣaya⁴ (content) of samāpatti (merging of citta²-mind in the object). vitarka-2 वितर्क-२ (YS II 33), violation of a yama (restraint). When a $yog\bar{i}$ is tempted to violate a restraint or an observance he is advised to remind himself that such violation would mean endless misery and ignorance.

vitarkānugata वितर्कानुगत (VBh I 17), accompanied by deliberation. The first among fourfold samprajñāta yoga. Vitarka is that where there is a special perception of the gross object. Special reasoning or ascertainment is yoga, the restriction connected with it is yoga connected with vitarka.

videha-1 विदेह-१ (VBh I 15, 19), without gross body. Having the experience through the subtle body is called videha. Videhas have the modification of the intellect without reference to the body, i.e. they are devoid of gross body.

videha-2 विदेह-२ (VB III 43), a type of dhāraṇā. According to this text, this kind of dhāraṇā is of two types; viz., kalpitā and akalpitā. In the former, i.e. videha, the citta remains inside the body. In the latter, however, it goes out of the body (cf. vṛtti²).

Patañjali has not used the word videhā. He has used the word mahāvidehā, which may be a technical term not implying that there should be a akalpitā videha dhāraṇā.

In the **dhāraṇā** called **videha** the body is forgotten to a large extent and this gives it the name by itself i.e. the $yog\bar{i}$ remains regularly oblivious of the body

site for kumbhaka (suspension of

in the state. Though self consciousness is not entirely absent.

vidyut विद्युत् (NBU 9), second in the series of twelve mātrās of praṇava. A sādhaka who leaves his body during the second mātrā is reborn as a high souled yakṣa.

vidhāraṇa विधारण (YS, VBh I 34), holding of breath. According to Vijñānabhikṣu, this retention of breath should be practised after inhalation, since after exhalation, it is not possible to retain the breath in. But VM's technique of retention is preceded by exhalation and not inhalation.

vidhiyajña विधियज्ञ (BY X 13, 14), a ritualistic sacrifice. However, this *yajña* has been considered to be inferior to **japa yajña**.

viniyoga-1 विनियोग-१ (YS, VB III 6), application. When one stage has been conquered by saṃyama, it is applied on the immediately following stage, i.e., only after conquering the earlier stages, the yogī should apply saṃyama to the later stages.

viniyoga-2 विनियोग-२ (BY I 42, II 5, 40, 50), application. One of the five features of mantra. Application of oṃkāra in the beginning of every religious act. This is called viniyoga. Mantra, applied for the achievement of specific desired object, is called viniyoga.

viniṣkampa विनिष्कम्प (ANU 22, 23), motionlessness. It is an essential requi-

breath) and is to be maintained for seven or eight mātrās (cf. Upanisad $brahmayog\bar{i}$) for $dh\bar{a}ran\bar{a}$ and for twelve mātrās for practising yoga. Obviously voga here means dhyāna. viparītakaraṇī विपरीतकरणी (G 58,59; GS III 2, 30-1; YTU 122; HP III 6, 76, 78; SS IV 69). It is a general name for the three topsy turvy poses-śirsāsana, sarvāngāsana and viparītakaranī in which the nābhi (navel) is taken above the talu (roof of throat), by the $yog\bar{i}$ standing on his head or his shoulders, so as to prevent the $p\bar{i}y\bar{u}sa$ (nectar) secreted in the tālu from falling into the agni (fire) in the nābhi. Depriving agni of this piyūsa is given much importance in Gorakşa Śataka and the aspirant is required to learn it from a guru² and not only read about it in books. This shows that there are more subtle methods also of preventing pīyūşa from falling into agni e.g. manipulating prāna². Viparītakaranī of GS and YTU is the same as is ordinarily known as śirsāsana. It consists in placing the head on the ground supported by both hands from behind, throwing up the legs and becoming straight and steady. Thus the nābhi goes above the tālu and this prevents the amrta from flowing into the nābhi. Consumption of this secre-

tion by fire in **nābhi** is supposed to be

the real cause of death and therefore a

daily practice of this **mudrā** is said to save the $yog\bar{i}$ from old age and early death.

YTU does not include viparītakaranī among the asanas. According to this text, it is to be done just for a moment to begin with and then the duration is to be gradually increased. It is said to cure all the diseases. Daily practice of this posture increases the internal heat of the body which is responsible for digestion. HP and YTU prescribe increase of food intake for the yogis who practise viparītakaranī. A person who practises śirsāsana has to eat different kinds of food so that he may not remain under-nourished in any way. After three months of practice, signs of old age are said to disappear and if someone practises it for three hours everyday they believe that that person will never die of old age or disease.

viparyaya-1 विपर्यय-१ (YS, I 8; VB II 5), ajñāna अज्ञान (ignorance) -one of the five cittavṛttis. All experiences caused by making mistakes in perception, memory or reasoning are viparyaya¹. Patañjali has not used this word as a synonym for the kleśa avidyā, as even pramāṇa (correct knowledge) can be prompted by the kleśa avidyā according to him. But the commentators of SK and YSU have used this term as a synonym for the kleśa avidyā, which is also called tamas by them. This has caused unnecessary confusion.

viparyaya-2 विपर्यय-२ (SK 46, 47), five of the fifty experiences which are, according to one arrangement, considered by the author to constitute the pratyayasarga. *Īśvarakṛṣṇa* has not said in so many words that the experiences generated by tamas, moha, mahāmoha, tāmisra and andhatāmisra are these five kinds of experiences; but since he has counted the variations of these five sources of ignorance among the fifty members of the pratyayasarga, it is clear that he means such experiences.

viparyasta विपर्यस्त = viparyāsa विपर्यास (SK 19, 23, 45), opposition, being entirely different. All the distinguishing marks of purusa mentioned in Kārikā 19 are said to flow necessarily from the puruşa and prakṛti¹ principles being essentially different from each other. Absence of the bhāva, called aiśvarya, amounts to meeting with insurmountable obstacles. The opposites of dharma, jñāna, virāga and aiśvarya i.e. adharma, ajñāna, rāga and anaiśvarya, are said to be the tamas contents of buddhi. Of these, ajñāna leads to bandha, which is the opposite of apavarga, and anaiśvarya means vighāta विघात, the opposite of avighāta. vipāka विपाक (YS I 24, II 13, IV 8), actualization of a potentiality formed in a human or animal organism. In so far as vāsanās are such potentialities, their arousal is also vipāka. Whatever a man does (all kinds of behaviour including consciousness), he leaves behind a disposition (saṃskāra), which remains as a permanent potentiality in the organism. Whenever this disposition is aroused by an experience in some way associated with the experience which caused the disposition, there results some action or experience. This is called the vipāka of the previous experience or action which generated the potentiality.

If by repeatedly acting in a certain way we developed a fascination for going on pilgrimage, whenever there is an opportunity of going on pilgrimage, we will readily avail of it. This is the **vipāka** of a disposition we have formed. According to the believers, in what they call depth-psychology, most of our actions and choices which cannot be explained in any other way are the **vipāka** of the wishes we had fostered. That we have forgotten those wishes, does not prevent their fulfilment. Memory is a system of dispositions. Remembering is their **vipāka**.

viprakṛṣṭajñāna বিমকৃষ্টরান (VB, VM III 25), knowledge of distant things. When one gets stability of mind then only there arises luminous sense activity which leads to viprakṛstajñāna.

viplavā विष्तवा (VM II 26), wavering (combined with erroneous perception). Yogic summum bonum lies in the attainment of unwavering discriminate disc-

ernment i.e. aviplavā vivekakhyāti. vibhāga विभाग (SK 15), distinction = one being different from another-otherness. Kārya (effort) and kārana (cause) are distinct from each other. This is what is here called their vibhāga. Some causes are other than their effects-not the same in any sense, but some causes are in some sense the same as their effects. Such a cause and its effect is different in one sense and yet the same in another sense. A potter is in a sense the cause of the pot, which he makes; but the pot is other than the cause-in no sense the same. Earth, on the other hand, which is the material cause of the pot, is other than the pot in one sense and the same thing as the pot in another. It is present in the pot. The pot is earthen and earth in that form is the pot. Difference in the properties of earth and pot is kāryakāranavibhāga. Their being of the same stuff is karyakāraņavibhāga. Similarly there is vibhāga as well as avibhāga between the vyakta (the manifested) and the avyakta (the unmanifested nature) which is its cause. This is the Sānkhya

vibhu विभु (BG V 15), ubiquitous, one of the qualities of God.

view.

vibhūti विभूति (VM III 1, 55), the supernormal powers. The third chapter of yogasūtra, describes the supernormal powers for the sake of the propagation of belief and also because it is favour-

able to the concentration. Vibhūtis are said to be accomplished through saṃyama. Vācaspati while stressing the importance of vibhūti rejects the objection against it and clearly states that for the attainment of isolation the supernormal powers are not absolutely useless though they are not directly the causes.

vimatsara विमत्सर (ATU 14), one who has no dveṣa (ill-feeling towards others) of any kind. To have no dveṣa is one of the qualifications of an ācārya (teacher of yoga).

vimarda विमर्द (SK 46), conflict, clash, struggle. **Guṇavaiṣamya vimarda** is the clash caused by inequalities in the strength and proportion of **guṇas** at any time.

If all guṇas were always equally forceful, then perhaps there would be no conflict among them and no possibility of one being overpowered (= dominated) by the other. The fifty different forms of the pratyayasarga are due to guṇavaiṣamya vimarda. In the absence of such conflict between the guṇas there would be no phenomena either mental or material.

vimuktaphala विमुक्तफल (ATU 7), the person who is not bound by the law of karmaphala (cf.YS II 14). The yogī who succeeds in seeing the internally aroused light is here said to be no longer subject to this law.

vimokṣa विमोक्ष (SK 56), liberation, rele-

ase from saṃyoga (connection with a liṅga). According to SK, creation is for the sake of vimokṣa of the puruṣas. In pradhāna there is said to be a natural urge for bringing about vimokṣa of puruṣas and the ultimate aim of all that takes place in nature is puruṣavimokṣa. This is the Sāṅkhya theory.

viyogakāraṇa वियोगकारण (VB II 28), the cause of separation. The cause of separation is discriminate discernment being the cause of separation from impurity.

virāja विराज (KU16), not possessed by the properties of rajas, an epithet for susumnānāḍi.

virati विरत्ति (YKUI 60), indifference. One of the ten obstacles in the path of yogic practices to be overcome.

virāga विराग (SK 23), deatchment. It is one of the four sāttvikarūpas (superior functions) of buddhi. Deatchment from everything leads to prakṛtilayatva (SK 45). It is only when jñāna dawns that vimokṣa is attained.

virāmapratyaya विरामप्रत्यय (YS, VB, VBh I 18), cessation of content of citta and modification. Regarding the modification also, the idea that it should vanish is virāmapratyaya¹. It is superior detachment, which is a sense of satiety even in discriminate discernment. By the continuous practice of virāmapratyaya one attains anya i.e. asamprajñāta stage.

virūpākṣa विरूपाक्ष (HP I 5), name of an

important $hathayog\bar{i}$ of the $N\bar{a}tha$ cult. Svātmārāma quotes his name as a mark of salutation to the $yog\bar{i}$.

vilambini विलम्बिनी (YSU V 18, 20), one of the sixteen principal nāḍis². It is said to be situated in the navel region from where the nāḍis branch off in all directions.

vivekakhyāti विवेकख्याति (YS II 26, 28, IV 29), the knowledge that puruṣa and prakṛti are absolutely different. But while this viveka (knowledge) is an experience, vivekakhyāti is a living belief. It is a part of the mental structure which determines experience and behaviour-not just a passing mental process. It is a realization. For Patañjali it is the knowledge that puruṣa is quite different from citta, which is ordinarily supposed to be the only self.

This realization makes the **citta**² conscious of its own secondary status. The only everlasting Reality is the **puruṣa**, not the **citta**. Sooner or later, every **citta** has to undergo **pratiprasava** (reverse evolution) and cease to exist as an individual.

vivekajajñāna विवेकजज्ञान (YS II 52, 54), intuitive discrimination. By performing saṃyama on kṣaṇa and krama (pattern of change which occupies a kṣaṇa) the yogī gets an intuitive knowledge of what is imperceptible. If there are two similar objects, e.g. one of which cannot be discriminated from the other by perception, the yogī knows by

saṃyama which is which. Intuitive knowledge of a complex situation is not gained part by part. It is given all at once. Besides, it can be of the past, of the future, as well as of the present. It sustains a *yogī* by giving him self-confidence. Discrimination between **prakṛti** and **puruṣa** naturally follows in course of time.

vivekadvāra विवेकद्वार (G 1), gateway of discrimination. *Gorakṣa's* concept of discrimination lies in understanding of the true nature of **upādhi** and **tattva**.

vivekanimna विवेकनिम्न (YS, VB, VBh IV 26), inclined towards the intellective distinguishing power. The citta at this stage becomes full of discriminative knowledge.

vivekin विवेकिन् (YS II 15), a person who analyses and discriminates-a wise man, and not the yogi who has successfully discriminated between puruṣa and citta (the permanent and the impermanent selves).

For realizing that life in the world is essentially and on the whole painful, it is not necessary first to discriminate between **puruṣa** and **citta**. This comes as the result of success in **yoga**⁴. On the other hand, one takes to **yoga**⁴ because one sees that there is more misery than pleasure in the world.

viśuddha विशुद्ध (G 62, 63, 83; YSUI 174, V 10), one of the cakras (centres for meditation). Its seat is the lower part of kantha (throat), inside on the level

of the Adam's apple. Somakalājala (nectar) which is secreted from this part of the body is to be retained there; and if this nectar is retained by a $yog\bar{i}$ in the viśuddhacakra for one month, the $yog\bar{i}$ does not decay. Two such nectars are mentioned in the Gorakṣaśataka: (1) that which is secreted in the viśuddhacakra and is called somakalājala and (2) that which oozes from candra in the throat and is referred to as piyūşa and amrta. But the two liquids are spoken of in the same terms and it appears that the kantha is regarded as one organ and that the whole of it secretes the amrta which flows down to the nābhi (navel) and is there burnt up by its heat

Three dhyānasthānas-(1) rājadantabila (G 64), (2) ghaṇṭikā (G 86) and (3) lampikā (G 86) are distinguished by G in the kaṇṭha and obviously amṛṭa is supposed to flow from all these spots.

YSU places the **viśuddhacakra** in the **kaṇṭhakūpa** (lower down in the throat) and using the simile of a wheel, believes it to have sixteen spokes.

viśuddhi विशुद्धि (YKU III 11), fifth cakra in the series of six cakras. This cakra is situated in the kanthamūla.

viśeṣa-1 विशेष-१ (YS II 19; SK 38-9, 41), last of the four stages of differentiation, according to *Patañjali*. As compared to the other stages, it is the stage of greatest specialization. The viśeṣas are the forms in which the aviśeṣas exist. According to VB, the eleven indriyas and the five mahābhūtas are the viśeṣas. Īśvarakṛṣṇa writes that though the mahābhūtas are supposed to be the śānta, ghora and mūḍha viśeṣas, in his opinion the śānta, ghora and mūḍha viśeṣas are the sūkṣma, the mātāpitṛja and the prabhūta individuals respectively (cf. ghora). The commentator, Vācaspati Miśra equates sūkṣmas with sūkṣma dehas (subtle bodies), mātāpitṛjas with the ṣāṭ-kauśika (having six sheaths) ones and prabhūtas with ghaṭa (pot) etc.

Thus lingas in which sattvaguṇa predominates, are sūkṣmaviśeṣas, the kalalas (fertilized ova), in which rajas predominates, are ghora viśeṣas and the sthūla śarīras (the material part of the living bodies, mainly the contribution of food) in which tamas predominates are the mūḍha viśeṣas. In Kārikā 41 he obviously uses this word for two viśeṣas other than sūkṣma.

viśeṣa-2 विशेष-२ (SK 16), specific, different from all others. Every form which the guṇas take is a particular combination, different from all other combinations.

viśeṣa-3 বিহাম-২ (SK 34), concrete as opposed to abstract, a percept or an image as opposed to a sensum. As a sense organ is stimulated we sense a quality like softness, redness, fragrance etc. At the same time we perceive a soft, red,

fragrant object. The latter is a viśeṣa³ viṣaya. Co-operation of manas with an indriya is necessary for experiencing viśeṣa³ viṣayas.

viśesatattvasamatā विशेषतत्वसमता (YCU 114), becoming one with the Absolute Reality, which is the final goal of yoga⁴, according to the vedanta school of thought. One of the methods adopted by the yogis for becoming one with brahman is here said to be to assume the posture of an **āsana** in which heels are placed touching the perineum below the genitals, to close ears, eyes, and nostrils with the fingers, to breathe in through the mouth and to suspend breathing, raising apana in all its richness and holding it in the head. In this context viśesa tattva is the One Supreme Reality (brahman).

viśeṣadarśin विशेषदर्शिन् (YS IV 25), a person who has discriminated between the permanent and the impermanent selves. Obviously, such a person sheds egoism, for which Patañjali's kleśa asmitā stands. In this Sūtra asmitā is referred to as ātmabhāvabhāvanā.

viśokā বিशাকা (YS I 36; VM III 49), removal of sorrow. There are two types of sense activities which are without sorrow. One is obtained by concentrating on intellect and the other on the first principle. Both the types are also of the nature of light. The supernormal powers like omnipotence and omnipresence are also termed as viśokā perfection.

After attaining this perfection the *yogi* becomes omniscient with his afflictions and bondage dwindled and gaining control he rejoices.

viśva विश्व (YCU 72; YKU III 21), one of the four **puruṣas**³ who are said to experience the four states of living beings, particularly men. **Viśva** is supposed to be the experiencer of the waking state and the experiencer of real objects with which one is face to face in the waking state.

YKU considers viśva to be one of the three puruṣas³ the other two being taijas and prājña. In fact, there is only one ātmā² to which different roles are attributed and different names given accordingly. Waking state (jāgrat) experiences are considered by these rsis to be gross as compared to those of svapna (dreaming), nidrā and turya states.

viśvakarmā विश्वकर्मा (BY IX 92), one of the names of God, performing all the actions of the universe, he is called viśvakarmā.

viśvodarā-1 विश्वोदरा-१ (DU IV 8, 15,23, 39), one of the four principal nāḍis according to this text. It is situated between kuhū and hastijihvā. Its presiding deity is pāvaka (fire).

viśvodarā-2 विश्वोदरा-२ (VS II 32, 40), one of the fourteen important nāḍīs, on the left side of the body. It is supposed to be interconnected with all the nāḍīs. The position of this nāḍī in kanda is in between kuhū and hastijihvā.

viṣaya-1 विषय-१ (YS I 11, 33, 37, 44-5, 49, III 54; SK 11), an object of knowledge or contemplation. Smṛti is successful recall of any object known previously and the sentiments of maitri etc. are to be entertained towards objects apprehended as sukha etc., vicāra is subtle (sūkṣma) object of contemplation, vitarka a gross one (cf. vivekajajñāna).

viṣaya-2 विषय-२ (YS I 15; YKU I 60; HP IV 90-1), desirable object. It may be one of this world or of the other world like svarga (heaven).

viṣaya-3 विषय-३ (YS II 51), act; here the act of exhalation or inhalation (cf. prāṇāyāma).

viṣaya-4 বিষয়-১ (SK 11, 50), object, as opposed to puruṣa. Complete disinterestedness in the five kinds of objects-visual, auditory, tactual, gustatory and olfactory, five out of the nine tuṣṭis.

viṣaya-5 विषय-५ (SK 33-5), the material (collected through the indriyas) dealt with by the antaḥakaraṇa. The group of ten indriyas is said to convey this material to the threefold antaḥkaraṇa and buddhi is said to go deep into it.

viṣayavatīpravṛtti विषयवतीप्रवृत्ति (YS I 35), a centrally aroused light, sound, smell etc. enjoyed by a yogī. This is not caused by any external sensory stimulation, nor it is ESP. It is somehow caused by an inner stimulation of the corresponding cerebral centre. When this arises, the yogī finds it easy

to fix his attention on it, i.e. easy to perform **dhāraṇā**. It also brings self-confidence and optimism to the *yogī*.

viṣāda विषाद (SK 12), dullness-neither tranquillity nor agitation. It is said to be of the nature of tamas. In consciousness, which is on the whole sattva dominant, the part of tamas is dullness, stupidity, ignorance. It raises its head in the state of viṣāda. Though all the three guṇas are present everywhere in ptakṛti, the phenomena in which one guṇa predominates and the other two are comparatively less active, are called after the name of that guṇa sāttvika, rājasa or tāmasa.

viṣuva विषुव (BVU 55), point of equal separation. The point where the ida and piṅgalā meet and from where prāṇa enters the mūrdhā is called viṣuva.

viṣṇu-1 विष्णु-१ (TBU I 5, 9; GS VII 18; YCU 75; HP III 105, IV 100), the Supreme Being. No difference has been made between viṣṇu and brahman in TBU or HP. GS also equates viṣṇu with brahman. YCU considers Him to be responsible for the maintenance of the creation of brahmā. This function being a pious one, viṣṇu is said to be sāttvika.

viṣṇu-2 विष्णु-२ (BY IX 81), God of preservation.

viṣṇugranthi विष्णुग्रन्थि (YSU I 87; YKU I 68, 85; HP IV 73), one of the three obstacles in the way of prāṇa² rising up the suṣumnā (spinal cord), the other

two being the **brahmagranthi** and **rudragranthi**. According to *Upaniṣadbrahmayogi*, this **granthi** is situated on this **anāhata** *kavāta* कवाट (door) in the chest. YKU calls this **granthi** an obstruction in the way of **kuṇḍalinī** rising along the **suṣumnā**.

viharaṇa विहरण (SK 28), change of place by moving the entire body, going about. It is one of the five vṛttis (functions) of the karmendriyas. It is the function of the karmendriya pāda (literally foot); though it is not necessarily the work of the feet. Viharaṇa is possible even for those who have no feet at all. Flight of birds also comes under viharaṇa, Rolling and hopping would also be viharaṇa.

vitarāga वीतराग (YS I 37), person who has no attachment to things of any kind whatsoever. Such a person is able to cross the *bhavasāgara* भवसागर (worldly existence, which is compared to a very rough sea difficult to cross).

virāsana-1 वीरासन-१ (HP I 21; SAU I (3) 4; VU V 16; DU III 1, 6; TSM 37), one of the principal āsanas². It consists in sitting with one foot above the opposite thigh and the other foot below the other thigh.

virāsana-2 वीरासन-२ (GS II 3, 17), sitting with one foot on the opposite thigh and the other foot, turned upside down by folding the leg, placed under the other thigh.

virāsana-3 वीरासन-३ (VS I 67, 72; VM

II 46), hero posture. One of the ten principal **āsanas** mentioned by *Vasiṣṭha*. Its technique consists in placing the foot on the opposite thigh and the other foot under the other thigh steadily. VM also discusses the technique of this **āsana** while commenting on VB. This is one of the twelve **āsanas** enumerated by *Vyāsa*. Its technique is as under: after sitting well on the ground, one foot touching the ground and other foot is placed over the partially contracted knee.

virya-1 वीर्य-१ (YS I 20), effort. Some people succeed in asamprajñāta yoga by effort. Others are in this state by their very nature.

virya-2 वीर्य-२ (YS II 38), energy. One acquires strength by living a continent life.

vṛkṣāsana वृक्षासन (GS II 5, 36), one of the thirtytwo āsanas² mentioned by Gheraṇḍa. It consists in standing on the ground like a tree, placing the right foot at the root of the left thigh.

vṛtta वृत्त (G 72), globular in shape. The atmosphere surrounding the earth is generally supposed to be spherical in shape. Hence the mahābhūta vāyu is here said to be a vṛtta in which sattva predominates.

vṛtti-1 वृत्ति-१ (YS I 4, 5; VB I 5, III 1, 12-13, 28-31), function. Cittavṛtti should therefore, mean mental process. But from the enumeration of vṛttis given by Patañjali it is clear that by the word **cittavṛtti** he means only "cognitive mental process". All the **citta-vṛttis** mentioned by *Patañjali* are forms of cognition.

Whether a vṛtti be of the guṇas or of any or all of the karaṇas, it is according to SK, always purposive, the purpose of all of them being service of the puruṣa¹ concerned (cf. puruṣārtha). vṛtti-2 वृत्ति-२ (YS II 50, III 43), position. In the context of prāṇāyāma² three positions of the chest are mentioned by Patañjali; (1) when the lungs are practically empty, (2) when they are full of air and (3) the mid-chest position. Accordingly, there are three kinds of prāṇāyāma². Patañjali's fourth kind of prāṇāyāma² has nothing to do with any such position of the chest. It can

Bahirakalpitāvṛtti III 43 is supposed by VB to be a position taken up by a **citta**¹ outside the body.

take place in any chest position.

This obviously can be done, if at all, only by the **citta**¹ of a highly advanced $yog\bar{i}$ and would be one of the rarest extraordinary powers that can be attained by practising **yoga**. The experiences of such a **citta** will now be called extra-somatic. But this does not seem to be $Pata\tilde{n}jali's$ meaning. For $pata\tilde{n}jali$, **bahirakalpitāvṛtti** is the position of **samāpatti** in an object outside, not in a part of the body and **akalpitā** here may mean complete absence of self-consciousness. This

position alone can be called **videhā**. A **cittavṛtti** can never be **videhā** if we understand **akalpitā** in this way and according to this interpretation **kalpitā vṛtti** cannot be **videhā** (cf. VB).

vṛtti-3 वृत्ति-३ (YS II 15), conation. Guṇavṛttivirodha is the conflict between sāttvika, rājasika and tāmasika vṛttis³, i.e. conations due to sattva, rajas and tamas respectively predominant.

vṛtti-4 वृत्ति-४ (HU 8), vṛtti⁴ includes cognitive, affective and conative states of consciousness, as well as the four well-known states: jāgrat (waking), svapna (dreaming), suṣupti (dreamless sleep) and turīya (fourth). HU has mentioned a fifth state beyond the turīya, in which the last nasal sound of oṃkāra merges in the haṃsa (Supreme Reality) (see Upaniṣad-brahmayogī).

vṛttinirodha वृत्तिनिरोध (VBI2), restriction of the modification of the mind. This is twofold-samprajñāta and asamprajñāta.

vṛttibodha वृत्तिबोध (VBh IV 22), knowledge of the modification of citta. The citta is predominantly sāttvika and it has the capacity to reflect the puruṣa. The puruṣa principle reflected in this mirror not only intelligizes the content of the citta but also identifies itself as the possessor of that knowledge and this state is called vṛttibodha.

vṛṣa বৃষ (G 60), the individual transmigrating soul (the jīva), who is said to reside in the chest. Jīva (= jīvana) is elsewhere in this text described as pervading the entire autonomic nervous system (G 25). But here **jīva** is said to reside in the **anāhatacakra** in the chest. As he is governed by the laws of the three **guṇas**, he is said to be *tridhā-baddha* त्रिधाबद्ध (tied in three ways)

The jīva is described as roaring aloud. Perhaps the meaning is that it is always in a state of pain which makes him roar for an escape.

vṛṣāsana वृषासन (GS II 5, 38), one of the thirtytwo āsanas mentioned by *Gheraṇḍa*. It consists in placing the anus on the right ankle and the opposite (left) foot under the other (left) side, touching the ground.

vedana वेदन (YS, VB III 36), supernormal power of touch. As a result of the practice of saṃyama, there arises supernormal power in sense organs by which there is access to divine touch. These powers arise even without desire for them.

vedapāraga वेदपारग (BY XI 10), accomplished in *Vedas*. One who goes beyond the tattvas and also knows the reality beyond it is called vedapāraga. One who is simply expert in recitation of *Vedas* should not be considered vedapāraga according to BY.

vedabāhya वेदबाह्य (BY XII 21, 22), not available in *Vedas* or other than *Vedas* or heterodox philosophical doctrines.

vedavit-1 वेदवित्-१ (KU 17), he who knows the truth. Veda here meaning pure knowledge. Between iḍā and piṅgalā there is said to be the supreme spot, presumably the one occupied by the top of suṣumnā. Suṣumnā is said to be the spot of the parabrahma. By the knowledge of that spot, is therefore, meant the knowledge of brahman.

vedavit-2 वेदिवत्-२ (BY XI9), well-versed in *Vedas*. The word appearing in *Vedas* consists of only five syllables. The person who knows the sixth becomes well-versed in *Vedas*.

vedānta वेदान्त (KU 10), expositions of the vedānta philosophy. The vedānta, particularly Kaṭha and Śvetāśvatara, in which the aṅguṣṭhamātra अगुष्टमात्र puruṣa is said to reside in the cavity of the heart (hṛdaya) described as shining like a red lotus.

veditavya वेदितव्य (ABU 17), that which ought to be known and is thus the lakṣya (target) of true knowledge-the ultimate goal of knowledge. The seeker after truth, aims at the knowledge of two things.

One is **śabdabrahma** which is **svara** and the other the **asvara brahma**. The former is **brahman** symbolised by the sound of **om** and the latter **brahman** beyond any sound or any other worldly representation.

veṣadhāraṇa वेषधारण (HP I 66; SSP V 19), external appearance; wearing a particular type of dress. Svātmārāma says that practice alone brings success, wearing a particular dress does not lead

one to success in yoga. In SSP also it has been declared clearly that veṣa is related to external physical appearance. Veṣa is related only to particular sect so as to facilitate the recognition of its followers but unless they follow particular ethical rules, they cannot attain the highest goal.

vaikārikabandha वैकारिकबन्ध (VBh I 24), one of the three bondages. The other two being prākṛtika and dakṣiṇā. The bondage of videhalayas is vaikārika. The liberated souls become liberated from these different bondages which itself proves that they had bondage at some time. Īśavara of yogasūtra has been conceived as beyond three bandhas.

vaikṛtika वैकृतिक (SK 43), acquired-developed, not original. Those bhāvas (dispositions) which are not innate and original are called vaikṛta वैकृत. The inborn ones are prākṛta. Some prākṛta bhāvas are present at the time of birth in a potential state only. They need time and opportunity for their full development. Such bhāvas² get completely developed by the time the child is old enough to act according to them.

The **sāṃsiddhika bhāvas** are those **prākṛtika** ones which are fully fledged from the beginning, e.g. pecking in a chick. The **vaikṛtika bhāvas** are those which are acquired by education and training.

Jñāna, rāga and virāga and mostly

aiśvarya are all vaikṛtika bhāvas. Some aiśvaryas are not. They are either sāṃsiddhika or prākṛta.

vaikhari वेखरी (YSU III 5, 10), one of the four śaktis (energies) which are said to be operative in producing speech. They are said to be the four constituents of sarasvati, the vākśakti (power of speech).

Vaikharī is responsible for emitting vowel sounds by manipulation of breath. This is the culmination of the function of the $v\bar{a}k\acute{s}akti$. If a $yog\bar{i}$ knows the $v\bar{a}k\acute{s}akti$ then by the grace of this goddess-sarasvatī-he acquires command over speech.

vaidyuta-1 वैद्यत-१ (YSU V 32), one of the five agnis (fires), which is here said to constitute the sūksma (subtle) vapu বাप (body) taken by brahman (the Supreme Reality). It is supposed to reside in the region between the lower part of the abdomen and the navel. It is described as one's own inner self. The five agnis³ may be the five centres of energy consumption. The energy consumed in living is, according to this text, the $s\bar{u}ksmar\bar{u}pa$ (form) of brahman, which is described as the subtle body of brahman. By GS agni³ is said to reside in the navel region. This fits in well with the idea expressed in YSU.

vaidyuta-2 वैद्युत-२ (BY II 114, 122), one of the ten synonyms of niṣkala-brahma. Omkāra is called vaidyuta

because it makes apparent the ascetic light between the eyebrows which shines setting aside the darkness.

vairatyāga वेरत्याग (YS, VM II 35), absence of enmity. As a result of ahiṃsā, there is giving up of mutual enmity amongst all living begins, which are near him, such as cat and mouse or horse and buffaloes etc.

vairāgya-1 वैराग्य-१ (KU 24; YS I 12, 15; HU 8), renunciation. The keenest prāṇāyāma2, according to KU, is sharpened on the stone of vairagya; and for this reason vairagya becomes a part of the yoga taught in this Upanisad. It is thus the yoga comprising of vairāgya, prānāyāma², pavanadhāranā and manodhāranā. For Patañjali vairāgya is complete renunciation of both worldly and superworldly enjoyable objects as well as of everything of the nature of gunas. VB gives svarga as an example of the latter. According to HU, the jīva experiences vairāgva when he occupies the centre of the heart called hrtpadma (see Upanisadbrahmayogi.

vairāgya-2 वैराग्य-२ (VM I 21), passionlessness or absence of passions.

vairāgya-3 वैराग्य-३ (YS, VB, VM III 50), renunciation.

vairāja वैराज (YSU II 15), the sthūla (gross) rūpa (form) of brahman.
Brahman in the form of the five mahābhūtas (cf. TSB 2) is called vairāja here. Nāda, i.e. aum, is here

said to be the $s\bar{u}k\bar{s}ma$ (subtle) $r\bar{u}pa$ of **brahman**. It consists in the sounds a, u, and m. The **para** form of **brahman** is even more subtle.

vaiśāradya वेशारद्य (YS, VB, VBh I 47), clarity. The pure steady flow of the sattva intelligence which is not overpowered by rajas and tamas, which is of the nature of brightness and from which the dirt of the impure covering has been removed is called clarity. Impurity is pāpa etc. which increases energy and delusion which alone is dirt and when it is removed that is not overpowered by energy and delusion and therefore the clarity.

vaiśvarūpya वैश्वरूप (SK 15), the universe and all that it contains. Isvarakrsna gives several reasons to support his thesis that there is a material cause of the universe and calls that cause avyakta. The orthodox ancient Indian philosophers had a confirmed belief in a single indiscriminate, indeterminate material cause of the universe. In the state of **pralaya** the universe disappears but its material cause survives. It is ever-lasting. The universe as it exists is transitory. According to SK, pradhana is avvakta in the state of pralaya; otherwise it is vyakta and exists as the universe.

vaiśvānarī वैश्वानरी (G71), one of the five dhāraṇās. The object (content) of this dhāraṇā is tejas (fire) which is here said to be situated in the tālu (roof of

the throat) bright red in colour like the insect *indragopa* and triangular in shape. The **tejas** in the **tālu** is the seat of **rudra**, whose **bījamantra** is *raṃ* †. Success in this **dhāraṇā** brings **vahnijaya** (conquest of fire) to the *yogī*.

vaisamya वैषम्य (SK 46), state of inequality (= disharmony). The difference between the vyakta (manifest) and the avvakta (unmanifest) condition of the gunas is that while in the former state they are active and clash with one another, in the latter state they are even with one another. None of the gunas then is subordinate to any other guna and none stronger or weaker. This is their sāmyāvasthā साम्यावस्था. By dint of this conflict among the gunas there appear fifty different forms of the pratyayasarga. Of course, it is for the same reason that the innumerable forms of the other sargas also appear. In their sāmyāvasthā साम्यावस्था one guṇa cannot even be distinguished from another.

vaiṣṇavī-1 वेष्णवी-१ (SAU I (7) 14), one of the important spiritually oriented mudrās. It consists in (1) the senses (here the eye) being directed towards external objects, while the mind is fixed on something else which is called the antarlakṣya and (2) a fixed gaze, i.e. stopping of the winking reflex. Many texts explain śāmbhavīmudrā in these terms and some describe khecarīmudrā in this way. The distinguishing

mark of this **mudra** is that while the eyes are open, the $yog\bar{i}$ does not see the objects before him. The essence of these **mudras** is the same, viz. their spiritual orientation. They are all contemplation on **brahman** which is called by different names.

vaisnavī-2 वैष्णवी-२ (VS II 26; NBU 10),

that which leads to the abode of viṣṇu. A synonym for susumnā. According to NBU, one of the twelve different mātrās of the pranava, which leads to the attainment of the abode of visnu. vyakta व्यक्त (SK 2, 10, 11), distinct like a figure on a ground. It is one of the three realities, complete insight into which is the best and the purest means of permanently getting rid of the three kinds of pain. Vyakta is the opposite of avvakta in as much as it is not the first cause; it is manifold and is neither everlasting, nor all-pervading, nor supporting, nor formless. It is many in one. But it resembles avyakta in being gunātmaka (of the nature of gunas), objective, knowable in the ordinary manner by perception, introspection, inference or testimony and devoid of cetana as also in not being a class of simple discrete individuals.

With the exception of avyakta, all guṇātmaka reality is vyakta (cf. mahat).

vyaktiśaktipañcaka व्यक्तिशक्तिपंचक (SSP I 55), five characteristics of vyaktiśakti: icchā (desire), kriyā (action), māyā (that indescribable potency which limits it by time or space), **prakṛti** (principle behind universe) and vāk (speech).

vyatirekasamjña व्यतिरेकसंज्ञा (VM, VBh I 15), the consciousness of discrimination. The second variety of vairāgya in the series of four types of vairāgya. This consists in the capacity to ascertain by differentiation which sense organs have been controlled and which are yet to be controlled.

vyavadhāna व्यवधान (SK 7), screen, covering, envelope. It is one of the eight causes of lack of knowledge (imperceptibility = our inability to know) of something. It is a screen coming between the knowing mind and the object to be known.

vyavahitajñāna व्यवहितज्ञान (YS, VBh III 25), knowledge of veiled or hidden. The luminous sense activity if directed towards veiled object one knows it. This is a type of vibhūti.

vyādhi व्याधि (YS, VB I 30), disease. One of the nine obstacles (antarāyas) in the path of yogic practices. Disease is caused by imbalance in the three humours or in the secretions or in the organs of the body.

vyāna-1 व्यान-१ (TSB 5, 9; TSM 1, 77, 82, 85; ANU 35; VB III 39; BY IX 132), one of the five aṃśas (components) of vāyu². Its function is grahaṇa. It is in conjunction with this that manas exists as vāyu.

In TSM the seat of vyāna is said to extend to the ears, the throat, the shoulders, the loins, the thighs and the bowels and it is supposed to facilitate the working of prāna, apāna etc. Vyāna is generally mentioned as one of the five well-known pranas1 $(v\bar{a}yus^3)$. It is supposed to pervade the whole body and to be of the colour of fire. Circulation of blood, which is an autonomic function, is often given this name as blood circulates all over the body. The different descriptions of vāyus given in different texts can be reconciled if we take vavus, called prānas², to be reflex actions performed by the agency of the autonomic nervous system.

vyāna-2 व्यान-२ (VS II 42, 46, 51), name of one of the ten vāyus and also one among five important vāyus. It pervades eyes and ear, neck, nose, throat and the region of eyes. The eminent functions of vyāna are releasing, holding, movement etc.

vyāḥṛti व्याहृति (ANU 10), bhūḥ भू:, bhuvaḥ भृव:, svaḥ स्व:, mahaḥ मह:, janaḥ जन:, tapaḥ तप: and satyam सत्यम् are the seven vyāḥṛtis. These words are to be recited along with om², the śiras and the gāyatrī mantra during prāṇā-yāma². The first three of the vyāḥṛtis are called mahāvyāḥṛti महाव्याहृति (see Medhātithi on Manu II 18).

vyutkramakapālabhāti व्युत्क्रमकपालभाति (GS I 54), one of the three kinds of kapālabhātis, other two being vātakrama and śītkrama. These, in fact, are the three ways of performing kapālabhāti. Vyutkramakapālabhāti consists in raising up water through the nose and throwing it out through the mouth slowly. It wards off ślesmadosas (diseases of phlegm).

vyutthana व्युत्थान (VB, VM I 3), active state. The conditioned state of spirit in which there is preponderance of one or the other guṇas. The unconditioned state comes only after the cessation of the modification of mind by which the spirit regains its unalloyed pristine form.

vyutthānasaṃskāra व्युत्थानसंस्कार (YS, VB III 9), subliminal impression of modification. The subliminal impressions of modifications are the characteristics of the mind. Similarly inhibition of the subliminal impression is also the characteristic of mind.

vyutthitacitta च्युत्थितचित्त (VB II 1), unsteady or fickle mind. Vyāsa considers the second chapter of yogasūtra i.e., sādhanapāda as a means of yoga for the unsteady mind. He further adds that a person with unsteady mind should begin the yogasādhanā with kriyāyoga.

vyoma-1 ट्योम-१ (GS III 63), the sky-one of the five tattvas³ (elements). It resembles the pure sea water. Its presiding deity is sadāśiva. Its bīja is "ham हं ". Its seat is mentioned by Gorakṣa (G 73) to be the brahmarandhra in the head (cf. nabhodhāraṇā).

vyoma-2 ब्लोम-२ (VS III 73), head, bregma. Last in the series of eighteen vital points. This is located three fingers above the forehead. The total measurement of the body from toe to bregma is ninetysix fingers by one's own hand.

vyomacakra-1 व्योमचक्र-१ (HP IV 45), a centre for meditation situated high up in the suṣumnā between iḍā and piṅgalā. It is said to be the seat of khecarī.

vyomacakra-2 व्योमचक्र-२ (HP III 36), khecari.

vyomapañcaka-1 व्योमपंचक-१ (MBU IV 1, 5; YCU 3), the five-fold ākāśas; bāhyābhyantara (outer-inner) lakṣyas (contents) of dhyāna in śāmbhavīmudrā. These five ākāśas are not the madhyatārakalakṣyas of the Advayatārakopaniṣad (cf. ākāśa). A knowledge of the cakras, the ādhāras, the three lakṣyas and the vyomapañcaka-gained by the method of saṃyama-makes one a true yogī. YCU places this ākāśa in the yogīs body instead of calling it a bāhyābhyantaralakṣya.

vyomapañcaka-2 व्योमपंचक-२ (SSP II 30), group of the five ākāśas. They are: ākāśa, parākāśa, mahākāśa, tattvākāśa and sūryākāśa. Among these the first i.e. ākāśa is said to be without attributes whereas the rest are said to be with attributes.

vyomavij \tilde{n} ana व्योमविज्ञान (G 99), this is one of the descriptions of a $yog\tilde{i}$ who

is in $\mathbf{sam\bar{a}dhi}$. The word means omniscience itself and since such a $yog\bar{i}$ is also described as $\mathbf{brahman}$ Himself the qualification is not quite inappropriate.

vrata-1 व्रत-१ (DU II 1), one of the ten niyamas (observances). No explanation is offered in DU. According to Jñānārṇava, a jain text, it consists in abstention from hiṃsā, anṛta अनृत (falsehood), steya स्तेय (stealing), maithuna मैथुन (sexual enjoyment) and parigraha परिग्रह (possessing property). Hence vrata is a yama (literally abstention).

vrata-2 রূর-২ (VU V 14), fasting; which is said to be one of the eleven **niyamas** in this text.

vrata-3 রন-২ (VS I 66), vows. One of the ten niyamas. This vow consists in practising all the theoretical knowledge acquired from the guru for the attainment of dharma, artha and kāma.

śa- श

śakta शक्त (SK 9), that which has the potentiality; e.g. a seed has the potentiality of developing into a plant. It will develop into its specific plant if it gets the proper soil, water, manure, sunlight, etc. In the seed there is a potentiality, of which plant is the actuality. One of the reasons which SK gives in support of satkāryavāda is that, something can be produced only out of that in which there is a potentiality of the thing to be produced. A mango-plant can come out of a mango-seed only and not out of

another seed or a piece of stone. The effect exists in its cause in this sense. **Śakta** and śakya शक्य are relative terms. The former has the potentiality of that latter; and the latter is the actuality of what is already there in a hidden form in the former. This is the theory known as satkāryavāda.

śakti-1 शक्ति-१ (SK 15; GS I 24), potentiality. Avyakta develops into vyakta because it has the potentiality of doing so. Hence it is the cause of the vaiśvarūpya (multiform) vyakta (cf. śakta, avyakta, vyakta).

śakti-2 शक्ति-२ (GS III 36, 37, 40, 43, 49, V 57, 65, VII 12; YKU I 2, 7, III 4,7; HP I 48, III 10, 100, 103-4, 107, 116 IV 54), kundalini. It is called śakti because it is a potential energy which every man is supposed to possess. This potential ability can be actualised by the vogis in many ways. In its potential form kundalini is said to be sleeping. Its being made kinetic is called its awakening. It is raised by the $yog\bar{i}$ to the head, where it is to merge in siva. This is lavavoga. The $vog\bar{i}$ imagines the **śakti** to be himself and the **śiva** in the brahmarandhra to be the brahman. This merging of himself in brahman brings bliss to him; and then the $yog\bar{i}$ is in the "one" and the "one" alone.

According to HP, the sleeping **kuṇḍalī** indicates bondage. If it is awakened by **yoga**, it brings liberation to the *yogī*.

The $yog\bar{i}$ is advised to become one with it by meditation.

śakti-3 शक्ति-३ (HP III 50), the rich and intense sensation complex rising up along the spine to the head. If in the state of khecari one meditates on this experience, one enjoys a long disease-free life.

śakti-4 शक्ति-४ (HP IV 18, 33, 102), energy. Suṣumnā is called energy of Lord śiva. It is this energy which is heard by the *yogis* as an internally aroused sound and nothing else.

śakti-5 शक्ति-५ (G 91), prakṛti, here supposed to be ātmā's own-not a separate and independent principle of reality. This is close to Śańkar's philosophy of advaita (monistic) vedānta.

śakticakra शक्तिचक्र (SSP I 14), the circle of primordial force responsible for creation. These forces consist of five evolutes, viz., nijāśakti, parāśakti, aparāśakti, sūkṣmāśakti and kuṇḍalinīśakti. The parapiṇḍa śiva has been manifested through these śaktis.

śakticāla शक्तिचाल = śakticālana शक्ति-चालन (YKUI2, 7, 8; HP III 6), arousing of the kuṇḍalinī which is called śakti. Śakticālana is the movement of this śakti up and down from its seat near the mūlakanda to the middle of the eyebrows. Sarasvatīcālana and prāṇāyāma are said to be the two main requirements for this. It is supposed to cure enlargement of spleen, dropsy and all other abdominal diseases (cf. śakticālanī-mudrā.)

sakticālanī mudrā शक्तिचालनीमुद्रा (GS III 2, 48-9; HP III 104), one of the twenty-five mudrās enumerated by GS. It consists in inhaling through the nostrils, blending prāṇa² with apāna¹ by force and, so long as prāṇa¹¹² does not rise up along the suṣumnā (spinal cord), keeping the anus contracted. Successfully raising prāṇa¹¹² to the head will raise an internally aroused sensation of light also. Practice of this mudrā is a prerequisite for the performance of yonimudrā.

The practice of **śakticālanīmudrā** is said to ward off old age and death; and every $yog\bar{i}$ is advised to practise it if he wants success in $yoga^4$. This **mudrā** appears to be the first phase of **yonimudrā**. No hard and fast line can be drawn between the two. Just arousing the potential power is **śakticālana**, while raising it upwards is said to be **yonimudrā**. The name **prāṇa** is also given to the air which is being inhaled and **apāna** to that which is being exhaled and their mixing up with each other is a description of **kumbhaka**.

But the so called $\mathbf{pr\bar{a}na}$ which is to be raised up to the head along the spinal cord is neither $\mathbf{pr\bar{a}na}$ nor $\mathbf{ap\bar{a}na}$, thus understood. It is not air at all. In fact, nothing actually rises. Certain sensations are felt in the back and to the $yog\bar{i}$

it appears that something is rising. This rising thing is variously called **vāyu**, **prāṇa²**, **apāna**, **kuṇḍalinī** etc.

śaktijñāni शक्तिज्ञानी (SSP VI 49), knower of śakti, a synonym of kaualajñāni i.e. one who is adept in both laukika and vaidika activities, one who is always in samādhi avasthā is called śaktijñāni.

śaktināḍi शक्तिनाडी (GS I 22), lowest part of the large intestine. It may come out by a slight straining at stool if the anal muscles are abnormally relaxed. For prakṣālana this nāḍi is drawn out by the healthy yogi deliberately and washed continually so long as faecal matter comes out. Then it is to be withdrawn carefully. Prakṣālana is described in connection with bahiṣkrta dhauti and is highly praised.

śaktipāta शक्तिपात (SSP V 62), one of the four cause for the attainment of paramapada, i.e., highest abode. Other three are listening to the guru, surrendering at the feet of guru and blessings of the guru.

śaktibhāk शक्तिभाक् (SSP VI 48), one who knows the identity between *kula* and akula is called śaktibhāk.

śaktisthāna शक्तिस्थान (VU V 53), locus of śakti. The locus of six cakras are the locus of śakti.

śaṅkhini-1 शंखिनी-१ (YCU 17, 20; G 19, 22; VU V 26; DU IV 8, 17, 22, 38), one of the principal nāḍis² of the nāḍicakra. It is situated between sarasvati and gāndhārī and runs up to the inside of the left ear. Its presiding deity is candramā (moon). It is obviously a nerve. Śańkha হাত্ৰ (conch shell) is an appropriate Sanskrit word for cochlea.

śaṇkhini-2 शंखिनी-२ (VS II 33, 38), one of the fourteen important nāḍis, located in between gāndhāri and sarasvati and extends upto left ear.

śańkhini vivara शंखिनी विवर (SSP II 6), a synonym for rājadantabila.

śabda-1 शब्द-१ (YS I 9, 42, B I 42-3, III 17; G 14, 62; ANU 4), word. According to Patañjali, vikalpa is the knowledge (a cittavrtti) corresponding to which there is no perceived or imagined object. It is abstract knowledge, which is the meaning understood when a word is heard, spoken, read or imagined. It is of the nature of a concept which is only the meaning of a word. The object (content) of sūksmadhyāna is said to be om which is a word. But the true object is not the word om. It is reality to which the name om is given. Patañjali considers the word om to be the name of isvara.

śabda-2 शब्द-२ (G 93), jaivatanmātra, one of the five tanmātrās in the body, the other four being rūpa, rasa, gandha and sparśa which are not mentioned in the *Gorakṣaśataka*. The theory is that the subtle form of matter known as tanmātrā is found in each sense organ and is responsible for making that sense organ respond to its adequate sti-

mulus by virtue of an affinity between that stimulus and the **tanmātrā** in the sense organ. This is the traditional explanation of "adequate stimulus". TSB calls the **tanmātrās** in the sense organs **jaivatanmātras**.

śabda-3 शब्द-३ (VB I 45, II 19, IV 14), the tanmātrā in which ākāśa is differentiated. This tanmātrā in ākāśa is responsible for sounds being heard by living beings. It is the source of affinity between external sound and the sense organ ear. Hence external sounds stimulate the ear and cause the experience of sound.

śabda-4 সহ্ব-४ (ANU 5, 14), one of the five kinds of objects which are enjoyed by the five **indriyas** (innate dispositions to enjoy objects known by the same names as the five senses).

Śabda⁴ is sound. Every living being is by nature a lover of certain sounds, including words and music. He is naturally attracted by them after having once experienced them. The experience brings pleasure to the individual. Indian call this instinct also as śrotra indriya which is directed towards sounds i.e. śabda⁴.

śabda-5 शब्द-५ (ANU 19), om².

śabda-6 মাজ্ব-६ (SK 51), one of the real achievements. It consists in knowledge gained by testimony by correctly understanding the meanings of words heard or read.

śabda-7 शब्द-७ (GS V 76; HP IV 101;

YS III 17; VB I 35, 42-3, II 19, III 17), an auditory sensation, perception or image-a presentative experience of hearing-ordinarily the effect of sound waves striking the drum membrane of the ear or an auditory abnormality. But yogis hear sounds without any such stimulus or disorder being present. In yogic language such auditory experiences are referred to as anāhata śabda⁷. These sounds are normal auditory sensations for which the stimulus comes from somewhere inside the body; may be the auditory centre of the cortex is directly activated by nerve currents coming through the spinal cord.

śabda-৪ মাজ্ব-৫ (SK 28, 34; VB III 41), physical sound- the air waves which strike the drum membrane of the ear. SK considers the vṛtti of the auditory sense to be directed towards it. Sound in this sense is generally called the viṣaya of the śrotra indriya. According to this text, the vāk karmendriya only produces sounds which can be heard.

śabdabrahma शब्दब्रह्म (ABU 17), cf. aksara.

śabdamāyā शब्दमाया (ABU 15), all that we understnad from the words we use in *vyavahāra* व्यवहार (our daily life). It is not ultimately real; only for our practical purposes it is real. Therefore, it is called māyā (illusion). For example, although everything except brahman is constantly in motion, we

perceive stationary objects and fixed things. This is **māyā**. For *vyavahāra* they are fixed, stationary and permanent.

But from the pāramārthika पारमार्थिक (ultimate Reality) point of view nothing is fixed or stationery. This pragmatic reality is called **śabdamāyā**. Because it is only of the nature of meanings of words which are all relative. Every word is ambiguous. A word can be understood only with reference to the context in which it is used. Yet the use of language serves our purpose very well. We can use more and more words to make ourselves intelligible to others. But no words can make the nature of ultimate reality clear to us. All clarification is relative. This is the theory of relativity propounded by ancient Indian philosophers.

śabdasaṃvit शब्दसंवित् (VB I 35), perception of supernatural sound. As a result of the practice of concentration on the root of the tongue, there arises the consciousness of supernatural sound, which further holds the mind in stability.

śamādi शमादि (ATU 1; VU II 4), śama शम (tranquility), dama दम (self control), uparati उपरित (detachment), dvandvasahana द्वन्द्वसहन (endurance), śraddhā (faith) and samādhāna समाधान (composure). These terms are so described by Upaniṣadbrahmayogī. Advayatārakopaniṣad is meant for those who have acquired perfection in these qualities and only those who have these qualities can hope to succeed in **tārakayoga**. These qualities are acquired by following the discipline of the stage of life to which one belongs, by bearing hardships and by pleasing the **gurus** (teachers of **yoga**⁴).

śarad शरद् (GS V 9, 14), one of the two seasons in which the practice of yoga proper should begin. From this point of view prāṇāyāma², dhyāna and samādhi¹ alone are yoga proper. The other season for beginning yoga is vasanta. Śarad covers roughly the months of September and October; but its influence is said to be felt approximately from the middle of August to the middle of November.

śarīra-1 शरीर-१ (YCU 72), one of the bodies of living beings. Śarīras are here said to be sthūla, sūkṣma and kāraṇa.

In the English language however only the **sthūla** (gross) **śarīras** are referred by the word bodies.

śarīra-2 शरीर-२ (VS II 5), body (of all human beings). It admeasures ninety-six fingers in its height from one's own fingers and has thirtytwo bones on both sides of the backbone and has seventy-two thousand nāḍīs.

śariranāda शरीरनाद (HP III 96), nāda aroused internally in the body. As a result of prolonged practice of āsana and prāṇāyāma etc., the yogī starts hearing internally aroused sounds.

śarvapi tha शर्वपीठ (HP IV 76), the highest centre for meditation, the topmost part of the brain.

śalabhāsana शलभासन (GS II 6, 39), one of the thirtytwo āsanas² enumerated by *Gheraṇḍa*. It consists in lying on the ground with face downwards, placing the two hands on the ground on either side of the chest with their palms pressing the floor, and lifting the feet half a cubit high.

śavavat शववत् (HPI32), like corpse. Śava means dead body. In śavāsana, the practitioner is directed to imitate the position of the dead body. It requires complete relaxation of the muscles leading to total immobility of the body as in the case of a dead body.

śavāsana शवासन = mṛtāsana मृतासन (GS II 4, 19; HP I 32), one of the principal āsanas. It consists in lying supine on the ground perfectly relaxed, as if a dead body. It removes fatigue and brings peace to the mind. The essence of śavāsana is relaxation.

Swāmī Digambarjī recommends **ujjāyī prāṇāyāma** and **dhyāna** in this position if one keep awaking in this condition.

śaśi মামি (G 59; HP III 78), candraliterally moon. Centres for meditation in the body are called by names like the sun, the moon and so on. Śaśi is said to be situated at the base of the palate.

In a topsy-turvy pose this part of the

body lies below the navel region and the **bhānu** in the navel is thus unable to swallow up the nectar flowing from the **śaśi**.

śaśinādī शशिनाड़ी (GS V 42), idā.

śākta शाक (SSP VI 51-53), literally means devotee of śakti and follower of five makāras in this changed sense. According to Gorakṣa, these five makāras have a different significance which is different from its literal sense and accordingly madya stands for mada, mudrā stands for mati, mīna for māyā, pala for manas and mithuna for mūrcchā.

śāṅkarī शांकरी (NBU 10), one of the ten mātrās of praṇava. This mātrā eighth in the sequence. Sādhaka leaving his body in this mātrā takes rebirth as rudra.

śanta-1 शान्त-१ (VB III 12), those experiences which generate happiness.

Ghora experiences are those which engender pain and mūḍha are those which delude us. Sattva² dominates the śanta experiences, rajas the ghora ones and tamas the mūḍha ones.

śānta-2 शान्त-२ (BY II 24), one of the three states in all of which brahman is immanent, the other two being ghora and mūḍha. Sattva should dominate in the śānta² condition as it does in śānta experiences. Hence we can say that brahman, immanent in cittas¹, exists in the śānta state.

śānta-3 शान्त-३ (BY II 130), one of the four ways of reciting **om**. The other

three being hrasva, $d\bar{i}rgha$ and pluta. This according to BY, is the view of $P\bar{a}r\bar{a}\acute{s}ara$ and other thinkers. In all probability the $\acute{s}\bar{a}nta^3$ way is the one in which no sound is produced whether hrasva, $d\bar{i}rgha$ or pluta.

śāntāḥ शान्ताः (SK 38), one of the three kinds of viśeṣas, the other two being ghora and mūḍha. Satttva²-guṇa predominates in the śānta viśeṣas. They are in this way liṅgas according to SK and according to Patañjali, cittas-the transmigrating souls. The living bodies they take are ghora. In them rajas predominates. The purely material part responsible for the growth of these bodies is mūḍha in which tamas² predominates. Hence according to SK, the liṅgas, the mātāpitṛjas and prabhūtas are the true śānta, ghora and mūḍha viśeṣas.

śābara शाबर (HP I 5), one of the *haṭha-yogī*s mentioned by *svātmārāma* as a mark of salutation to the *yogī*s and glorification of **haṭhayoga**.

śāmbhava शास्त्रव (TBU I 1), pertaining to Śambhu (born out of nothing).

Brahman is so called because He is born out of nothing. However, brahman is pease itself, not śūnyatā (absolutely nothing).

śāmbhavasthāna शाम्भवस्थान (VU V 53), the locus of Śambhu. Above the throat and upto the top of the head.

śāmbhavī-1 शाम्भानी-१ (HP III 4), suṣumnā. śāmbhavī-2 ज्ञाम्भवी-२ (HP IV 18), pertaining to Śambhu, Lord śiva.

śāmbhavīmudrā शाम्भवीमुद्रा (GS I 53, III 2, 53, 54, 57, VI 20, VII 57; HP IV 35, 36, 38, 67; ATU 12; MBU I (3) 5, II (1) 8, III (1) 2), one of the spiritually oriented mudrās. It consists in looking within the eyes or looking a little above the eyes inside, though the eyes may be open and seeking delight in oneself. Rājayoga is possible by successfully adopting this mudra, which implies dhyāna. Both, Supreme Bliss and Supreme Realization, come to the $yog\bar{i}$ by success in this kind of meditation. Essentially these two are one and the same thing. Atmapratyaksa आत्मप्रत्यक्ष (self-realization) is said to imply ānanda (bliss).

In ATU two characteristics of this mudrā are mentioned; (1) antara bāhya laksya drsti and (2) absence of nimesa and unmesa निमेष-उन्मेष (closing and opening the eyes). The commentator *Upanisadbrahmayogi* so interprets antarabāhyalaksyadrsti. This seems to be a better rendering than "either in antaralaksya or a bāhyalaksya being the object of drsti". The idea seems to be that in the state of sambhavimudrā, yogī's eyes may be directed towards the objects outside but he sees the brahman within. The idea of the Reality, which everybody really is, is incessantly present in the yogi's consciousness, even while he is looking at something outside. This is exactly how vaiṣṇavīmudrā is described by SAU. The winking reflex can be stopped either by keeping the eyes closed or half open. Hence it is said that the $t\bar{a}rakayog\bar{i}$ either keeps his eyes closed or half-open. This, however, is not mentioned by *Gheranda*.

Śāmbhavī thus appears to be samādhi without kumbhaka (suspension of breath). Patañjali too does not insist on kumbhaka for samādhi. The characteristic which distinguishes śāmbhavī from Patañjali's samādhi is that the lakṣya (= artha) is always brahman in śāmbhavīmudrā.

This **mudrā** is brought in by SAU and NBU as an advanced stage in **prāṇā-yāma**. This appears to be the significance of the expression *pūrvābhyāsa* पूर्वाभ्यास.

Śāmbhavīmudrā, according to these *Upaniṣads*, consists in (1) keeping the eyes open or half-closed, (2) not seeing anything at the same time, i.e. having a vacant gaze, (3) not winking, (4) fixing the mind on a psychological object of consciousness, (5) carrying **prāṇa**² to the head and (6) raising the eyebrows just a little.

Success in this **mudrā** means realization of the **saccidānanda** *tejaḥkūṭa-rūpa-paraṃbrahma* तेज:कूटरूप-परं ब्रह्म (God).

According to HP, śri গ্রী (esteemed) śāmbhavī and khecarī (mudrās) dif-

fer in their condition (of gaze) and place (point of concentration in the body); (but both) bring the bliss of laya of citta in the void which is of the nature of citsukha चित्सुख (divine bliss). Bodily counterpart of śāmbhvīmudrā is a vacant gaze and fixed eyelids while that of khecarīmudrā is the insertion of the tongue in the cavity in the upper palate and the gaze fixed between the two eyebrows inside.

Since no particular spot in the body is prescribed for concentration in **śāmbhavīmudrā**, the spot does not seem to be of such great importance and some manuscripts have omitted the word *dhāma* धाम (region).

śāśvata য়ায়নান (TBU I 8), eternal. brahman is here, as elsewhere referred to, śāśvata (eternal).

śikhāprāṇamayīvṛtti शिखाप्राणमयीवृत्ति

(TSM 23), manahprāṇavṛtti (respiration accompanied by mental activity) both of which are to be eliminated by the practice of the yogāṅgas. According to Patañjali, cittavṛttinirodha (cessation of cittavṛttis) is samāpatti. Prāṇarodha (absence of respiration) is prāṇāyāma². Generally these two are practised together by the yogīs. They say that success or failure in one of these brings success or failure in the other. Ordinarily mental processes and respiration go on simultaneously.

śikhisthāna-1 शिखिस्थान-१ (TSM 56), agnisthāna (cf. agni).

sikhisthāna-2 शिखिस्थान-२ (DU IV 1), a spot in the central part of the body shining like molten gold. It is of a triangular shape in men, 1½ inches above the gudā (anus) and 1½ inches below the genitals.

sikhisthāna-3 शिखिस्थान-३ (VS II 8-9), place of fire. In the centre of the body (dehamadhya) there is a place of fire having the glow of heated gold. It is triangular in the human body, quadrangular in animals and circular in birds.

siras शिरम् (ANU 10), literally peakpinnacle, climax, During prāṇāyāma² the gāyatrī mantra is repeated twice along with the vyāḥṛtis, the prāṇava (om) and śiras. The popular śiras consists of the words: āpo jyotī rasomṛtaṃ brahma bhūrbhuvaḥsvarom (āpah, jyoti, rasa, amṛta, brahma, bhūḥ bhuvaḥ, svaḥ and om). The vyāḥṛtis precede, while the śiras comes after the recitation of the mantra.

śiva-1 মিল- থ (GS III 36-7; TSM 12-13, 16, 20), brahman = ātmā. For the purposes of yonimudrā, śiva is located in the parāmbuja ঘ্যান্ড্রন্স in the head. This spot is perhaps that which is called brahmarandhra. The transmigrating self of the yogī is identified with the śakti which is roused and carried to the head, where it merges in the ātmā (brahman) and the yogī has the experience of "One and One alone".

śiva-2 গািa-২ (TSM 27), auspicious. Jñā-

nayoga is said to be the most auspicious.

śiva-3 ছিবে-३ (HP I 33, 58, IV 1, 46, 48), Maheśvara, the Supreme deity ordinarily supposed to be higher than brahmā and viṣṇu. Some writers consider śiva and viṣṇu to be the names of the same God, the Supreme Reality called brahman.

śiva-4 शिव-४ (SSP I 14), parapinda.

śiśira ফিজিফ (GS V 8, 11, 14), the winter season. Beginning of strenuous prāṇā-yāma is prohibited in this season. It may tell on one's health. Each season according to this text, covers two months. Middle of November to middle of January are supposed to be cold months.

śitali शीतली (GS V 46, 69; HP II 44, 58; YKU 1, 21, 31), one of the eight kumbhakas. It consists in sucking air so as to strike the tongue, restraining the breath, and then slowly exhaling through both the nostrils. This is supposed to cure enlargement of spleen, fever, indigestion, diseases of phlegm and bile, as also to conquer hunger and remove all poisons from the body.

śitkrama शीत्क्रम (GS I 54), one of the three methods of performing kapālabhāti, the other two being vātakrama and vyutkrama. It consists in throwing out through the nose, the water which has been taken in through the mouth. By practising this, which is one of the saṭkarmas the yogī's body acquires

unparalleled beauty and the $yog\overline{i}$ does not suffer from old age, fever or any other diseases. All **kapha doṣas** (diseases of phlegm) are cured by this practice.

śuka शुक (VU IV (2) 34, 36, 38), one of the two kinds of aspirants of liberation, the other being vāmadeva. The śuka's is the speedy way, vāmadeva's the slow way. The śukamuktas शुक्रमुक्त are those who have realised the truth quickly by discriminating between brahman and everything else. Following this method a yogī can, they believed, attain mokṣa in his present life.

śukra মুক্ক (HP III 89), spinal secretions which are necessary for preserving life and which can be controlled by a *yogī* by practice and thus a *yogī* can live long.

śukla-1 शुक्ल-१ (VB, VM, VBh I 33), pure, sāttvika. As a result of the cultivation of attitude like maitrī, karuṇā, muditā and upekṣā towards sukha, duḥkha, puṇya and apuṇya objects respectively, there arises pure or sāttvika dharma in the citta of sādhakas. Vijñānabhikṣu explains śukla as not mixed with the sin. By destruction of tamas, the mind gets rid of dirt and therefore, it becomes śukla.

śukla-2 शुक्ल-२ (BY II 114, 121), a synonym for niṣkala-brahma. It is called śukla because by nature it is pure, it carries to the holy state and removes the sin.

suklakṛṣṇakarma श्वलकृष्णकर्म (VB, VM, IV 7), mixture of good and evil karmas. One of the three varieties of karmas belonging to the persons other than yogīs or sannyāsīs. An action leading to both good and evil consequences such as performance of rituals which involve injury to some and benefit to others.

śuklānāḍi शुक्लानाडी (KU 9), a synonym for suṣumnā nāḍi. The nāḍi which is principal among seventytwo thousand nāḍis, is of white colour, hence śuklā nāḍi.

śuci शुचि (YS II 5; ATU 14), pure. Since rajas and tamas are supposed to be impure and sources of ignorance and delusion śauca in addition to cleanliness implies sāttvika qualities. SK regards dharma, jñāna, vairāgya and aiśvarya to be the sāttvikarūpa buddhi. In this way they will all be included in śauca which, according to ATU, should be one of the qualifications of an ācārya (teacher of yoga⁴). Taking aśuci (impure things) to be pure is, according to Patañjali, a part of the kleśa avidyā.

suddha-1 शुद्ध-१ (YS II 20), not affected in anyway. Puruṣa² does not assume the form of citta¹ or its vṛttis. Nevertheless he knows them. Pañcaśikhā-cārya calls this jñānavṛtti; but in fact we have no appropriate word in English or Sanskrit to describe this knowledge of his citta² which every puruṣa has.

Perhaps following *Patañjali*, we can use the word *anudṛṣṭi* अनुदृष्टि corresponding to his *anupaśyaḥ* (seer). In IV 22 *Patañjali* uses the word **saṃvedana** in this sense.

śuddha-2 शुद्ध-२ (TBU I 49), having no trace of avidyā or any other kleśas. Since brahman is śuddha those who know brahman should be śuddhacitta.

śuddhi शुद्धि (YS III 55), separationisolation. It is not the same thing as aśuddhikṣaya (destruction of impurities) of (YS II 43), At kaivalya, puruṣa and citta are separated and thus both of them become equally unmixed in every way.

śubha शुभ (TSM 73), one of the ten principal nāḍīs². It extends from its source in the kanda to the end of the genitals.

subhecchā-1 शुभेन्छा-१ (VU IV (1) 3, (2) 1,3,11), the first of the three mumukṣā (desire for liberation) bhūmis (stages). Before getting vairāgya (detachment) a person wishes that he should be counted among people who are learned and good. This is the stage called śubhecchā. It is the beginning of progress in the right direction. The very first stage of development out of the seven mentioned in this Upaniṣad.

śubhecchā-2 शुभेच्छा-२ (VU II 5, 11), virtuous desire. First in the series of seven stages of knowledge.

śuṣkabasti शुष्कबस्ति (GS I 45), cf. basti = vasti. śunya-1 शून्य-१ (HP III 52, IV 10, 70), the hollow in the upper palate which is the meeting place of the passages from the two nostrils, the two ears and the mouth. This pure spot is said to be the seat of khecarimudra. By the practice of different asanas, praṇayamas and mudras, praṇa gets concentrated there. Then the yogi experiences pure bliss and hears a peculiar centrally aroused tinkling sound.

śūnya-2 স্থান্থ-২ (HP IV 38, 71), absence of all the states of śāmbhavī and khecarī. Instead the *yogī* experiences divine bliss.

sunya-3 शून्य-३ (VS III 56, VI 59, 60), void. Samādhi is said to be a state devoid of all desires hence it is void. It is a state wherein there is oneness between individual self and absolute self. Void is a state which transcends the dhyāna.

śunya-4 সুন্থ-৮ (SSPI15, 18), self-caused (causa sui) having five characteristicslilatā (spontaneity), pūrṇatā (completness), unmanī (ultimate stage of consciousness), lolatā (uncomprehendableness), and mūrcchatā (egolessness).

śūnyapadavi शून्यपदवी (HP III 3, 4), suṣumnā.

śūnyāśunya शून्याशून्य (HP IV 4), rājayoga, samādhi.

śūrā शूरा (YSU V 22), one of the sixteen principal nāḍīs². It runs from the nābhi (navel) to the middle of the eyebrows.

śaiva शेव (SSP VI 40), knower of śiva.

One who knows śiva as having the nature of purity, calmness, formlessness, highest blissfulness is called śaiva.

sodhana-1 शोधन-१ (TSM 94) = kumbhaka¹.

śodhana-2 সাঘন-২ (GS I 9, 10), cleansing. It is one of the seven achievements of ghaṭayoga described by GS. The saṭkarmas are here said to be the six ways of śodhana².

śoṣaṇi शोषणी (G 74), nabhodhāraṇā. śauca-1 शोच-१ (YS II 32; DU I 6, 20-21; TSM 33; SAU I (1) 4, 14; BY VII 159), purity. It is one of the niyamas.

Washing away dirt from body by earth and water is said to be **śauca** in DU. Since the self is pure, the knowledge "I am the self" is said to be the true **śauca** (purity itself). Those who only think of cleaning their bodies are ignorant persons.

TSM considers purity of the body and the mind to be **śauca**.

In SAU **śauca** is said to be of two kinds. Cleaning the body with earth and water is external **śauca**. Purification of the mind is said to be internal **śauca**. The latter is attainable by training the mind. BY seems to includes **śauca** among the **yamas**.

śauca-2 शोच-२ (VS I 51), purity, cleanliness, one of the ten yamas. It is twofold in nature-external and internal. The first variety involves the purity of body with the use of clay and water etc, whereas the second is mental purity to be achieved through right action and spiritual knowledge.

śmaśāna श्मशान (HP III 4), susumnā.

śraddhā अद्धा (YS I 20), religious faith and optimism. Yogīs are said to get into the asamprajñāta state after a long practice of śraddhā etc. but the bodiless prakṛtilayas are in this state by nature.

śrapaṇa য়য়য় (TSB 6), heating for the purposes of assimilation of food. It is the function of apāna, to be more correct, the reflex action called apāna. The five words prāṇa, apāna etc., often called the five prāṇas or five vāyus, are used in different senses in different contexts. It is necessary to understand the correct significance of any of these words with reference to the context in which it is used.

śrāntihara श्रान्तिहर (HPI32), warding off fatigue. Śavāsana wards off physical fatigue. By the practice of śavāsana muscles work more efficiently because of they being relaxed.

As fatigue is removed from the body **śavāsana** is called **'śrāntihara'**.

śrāvaṇa शावण (YS, VB, VM III 36), supernormal power of hearing. When knowledge of the **puruṣa** has been obtained by performing **saṃyama** on **sattva**, the *yogī* achieves the capacity of hearing the divine sounds.

śriparvata श्रीपर्वत (DU IV 48), name of

a holy place of pilgrimage. According to this *Upaniṣad*, all the holy places of pilgrimage are inside the human body and one should travel (meditate on) these internal holy places. Śrīparvata resides in the head region in one's own body.

śrutānumānaprajñā श्रुतानुमानप्रज्ञा (YS VB, VM, VBh I 49), an intelligence arising from scriptures and inference. The object of such an intelligence is not the particular but generic or universal in nature because it is not possible to denote a particular either through scriptural testimony or inference. Such an intelligence is different from rtambharāprajñā because the latter has a particular as its object.

śruti श्रुति = śabda शब्द = vacana वचन (G 3), the *Vedas*. They are compared to a *kalpataru* कल्पतरु (the tree which fulfills all desires) and **yoga** to the fruit of that tree.

śrotra প্লান (SK 26), the sense of hearing (ear). It is one of the five buddh-indriyas, the other four being, cakṣu (eye), ghrāṇa (nose), rasanā (tongue) and tvak (skin) (cf. indriya).

śleṣma श्लेष्म (HP II 52, 65, V 4; VB III 29), **kapha**.

śleṣmadhātu श्लेष्मधातु (HP V 4), kapha; one of the three (Āyurvedic) humours. It is said to be in the parts of the body above the region of the chest.

śvāsa-1 श्वास-१ (HP II 17, 25, V 13, 15), asthma which is cured by **dhauti**, by

doing a few **kumbhakas** after meals and practising the **mudrās** to perfection.

śvāsa-2 ञ्चास-२ (VS V 25-27), inhalation and exhalation. It is through śvāsa, vāyu is said to pass throughout the living body. Śvāsa is (small) unit of time equal to four seconds. Sixty śvāsas are equal to one prāṇa, six prāṇas make one ghaṭikā, and five ghaṭikās are equal to one rāśi and twelve rāśis make one day and so on. Thus one śvāsa is equal to four seconds.

śvāsapraśvāsa श्वासप्रश्वास (YS I 31), accelerated breathing. If a plateau appears in the curve of progress in yoga due to some serious obstacle which causes the yogī's mind to waver and the yogī feels distracted then, among other signs, he experiences acceleration of breath, i.e. breathing, which slows down while yoga proceeds satisfactorily, gets perceptibly rapid when there is a disturbance causing a setback.

sa- ঘ

ṣaṭkarma षट्कर्म (GS I 12; HP II 21-2, 37), the six purificatory processesdhauti, basti, neti, nauli (laulikī), trāṭaka and kapālabhāti. Purification of body in every way is said to be acquired by the practice of these.

HP advises them only for those who suffer from excess of fat or phlegm. Otherwise they need not be resorted to. satcakra-1 ঘ্ৰয়ক- (GS III 34), while

rising to the head prāṇa² (=māruta) has to pass through six dhyānasthānas (centres for meditation), each of which is to be contemplated by the yogī, one after the other, during the performance of yonimudrā. Gheraṇḍa has not enumerated them. G has however, mentioned nine dhyānasthānas. These cakras are sometimes referred to as wheels with so many spokes and sometimes as lotuses with so many petals.

satcakra-2 ঘহ্মক-২ (YCU 3-13), six cakras. Centres of energy, there are six such centres. They are mūlādhāra, svādhiṣṭhāna, maṇipūra, anāhata, viśuddha and ājñā. The location of the first, mūlādhāra, is anus and has four petals, the second is at the root of genital and has sixteen petals, the third is in navel region and has ten petals, the fourth is in heart region with twelve petals, the fifth is in throat region and has six petals and sixth is in between the eyebrows and has two petals. Without the knowledge of these cakras one cannot get success in yoga.

ṣaṭsampatti षट्सम्पत्ति (VU II 4), śama (peace of mind), dama (self-control), uparati (detachment), titikśā (resignation), śraddhā (faith) and samādhāna (composure) (see Upaniṣadbrahmayogī) (cf. samādhi).

ṣaḍbhāva षड्भाव (VU I 8), six modes of being. Asti (is), jāyate (comes into existence), vardhate (grows), pariṇamate (changes) *kṣīyate* (decays), *naśyate* (is destroyed) are six of the ninetysix **tattvas¹** (realities) according to this text and are called the six **bhāvas**.

ṣaḍaṅgayoga षडंगयोग (ANU 6), sixfold yoga, consisting of pratyāhāra, dhyāna, prāṇāyāma, dhāraṇa, tarka and samādhi.

ṣaṇmukhīkaraṇa षण्मुखीकरण (MBU II (2) 2), the practice of covering both the ears, both the eyes and both the nostrils with the fingers. Nothing more is said about it. It is a position in which dhyāna is practised.

saṣṭinaḍikā ছন্টিলাভিকা (G 96), sixty nāḍikās. One nāḍi is a time unit of twentyfour minutes, therefore sixty nāḍikās means twentyfour hours. According to G, dhyāna (should) last for twentyfour hours.

sodaśādhāra-1 षोडशाधार-१ (HP III 72), sixteen vital points in the body. They are, according to Brahmānanda, aṅguṣṭha (big toes), gulpha (ankles), jānu (knees), ūru (thighs), sīvanī (perineum), liṅga (generative organ), nābhi (navel), hṛd (mid chest), grīvā (neck), kaṇṭhadeśa (throat), lambikā (tongue), nāsikā (nose), bhrūmadhya (space between the two eyebrows), lalāṭa (forehead), and brahmarandhra. Through the practice of jālandhara bandha one can have proper control over these ādhāras.

sodaśādhāra-2 षोडशाधार-२ (SSP II 10), sixteen vital points. They are (i) big

toes- dhyāna on these makes the gaze steady; (ii) mūlādhāra-(when pressed with heels) increases the fire; (iii) gudādhāra-through the concentration and expansion of which the apanavayu is steadied; (iv) medhrādhara-through the contraction of which three knots i.e. brahmā, visnu and rudra are broken and pranic sensation is made to rest in space between the eyebrows; (v) uddyānādhāra-through the practice of uddiyana urine and faeces are minimised; (vi) nābhyādhāra-when from nābhi om is pronounced with concentrated mind, nāda gets absrobed; (vii) hṛdayādhāra-when prāṇa is retained in heart, lotus is opened up; (viii) kanthādhāra-root of the throat, when it is tied through jalandharabandha the flow of vayu in ida and pingala is stopped; (ix) ghan tikā dhāra-ulva when touched with tip of the tongue the amrtakalā (nectar) starts flowing; (x) tālvādhāra-soft palate-by moving (in all directions) and lengthen-ing the tongue and placing its tip in the cavity at the end of soft palate yogi becomes like wooden log, i.e. unmoved by external and internal stimulus or disturbances; (xi) jihvādhāra-tongue-dhvāna upon the tip of the tongue removes all the diseases; (xii) bhrūmadhyādhāra-in between the eyebrows-dhyana on candra is bhrūmadhva brings cooling nāsādhāra-noseeffect: (xiii) concentration upon tip of the nose

makes the mind steady; (xiv) nāsāmūla-root of the nose-dhyāna on it (one finger below the bhrūmadhya) yogī visualises the flame; (xv) lalāṭādhāra-forehead-by dhyāna on flame at forehead yogī becomes lusturous; (xvi) brahmarandhrabregma, here there is ākāśacakra with ādinātha and by dhyāna on this yogī becomes like ākāśa.

sa-स

saṃjñāsaṃjñin संज्ञासंज्ञिन् (B III 26), one of the four kinds of divine beings living in the satyaloka-the third world of brahmā. These gods are supposed to establish in themselves and have control over the primary cause. These divine beings are always in the state of asmitāmātra dhyāna.

samyama संयम (YS, VB, VM, VBh III 4), a technical term for the combination of the practices of dhāraṇā, dhyāna and samādhi having the same object for all these three stages of concentration. This also indicates the gradual intensity of concentration in these three consecutive stages. According to Dr. P.V. Karambelkar, the mastery over all these three processes leads a sādhaka to samādhi in one instant which suggests that the whole process is under sādhaka's control and thus is has been designated as samyama i.e., complete control. Vyāsa and Vijñāna-bhiksu consider this one name for this triodhāraṇā, dhyāna and samādhi.

samyamitendriya संयमितेन्द्रिय (GS II 7; HP I 35), with indrivas (desires) controlled. The word indriva has at least three meanings; (1) sense and action organs, which are physiological, (2) the abilities to sense and the dispositions to act, which transmigrate with us and are sūksma (subtle) and (3) innate impulses to perceive objects of pleasure and act to get pleasure. It appears that in this verse Gheranda uses the word indriva in the third sense as Patañjali does in I 41. A more or less permanent freedom from desires would be vairāgya. But at least a temporary (for the time being) desirelessness is necessary for success in siddhāsana, according to GS and HP.

samyoga-1 संयोग-१ (YS II 17, 23, 25; SK 20-1, 66), purusa prakṛti relation. It is unique relation which cannot be defined. VB's word sannidhi सन्निधि (being near) is significant. Samyoga does not mean actual contact, or nearness in space. It is only an orientation, and is the source of all the misery in the world. Hence the need for kaivalya. What exactly the Sānkhya samyoga is, is a mystery. But all the Sānkhya thinkers believe that it is broken only by virtue of supreme realization which Patañjali calls vivekakhyāti. The only object with which the ancient thinkers took to yoga was ending the samyoga. Health and mental fitness are only secondary gains. The ancients never

considered these to be the aim and object of **yoga**, though they are necessary prerequisites.

saṃyoga-2 संयोग-२ (VB, VM, VBh II 17, 23), conjunction, the cause of bhoga (experience, birth and re-birth) and apavarga (liberation). The conjunction of seer (draṣṭā) and the seen (dṛṣya) is the cause of all sorts of experiences since it leads to cycle of birth and rebirth. Saṃyoga is also said to be the cause (means) of liberation which consists in self-realization through the knowledge of it by puruṣa.

saṃvit-1 संवित्-१ (YS III 34), insight into anything. If a yogī wants to have an insight into the nature of citta, he is advised to perform saṃyama on hṛdaya (central spot inside the chest) where his citta may be seen by him. Of course, no image of citta is possible. Concentration on hṛdaya, while inquisitively thinking of citta, will give a yogī insight into the nature of cittanot its image. This seems to be Patañjali's idea.

saṃvit-2 संवित्-२ (VB III 36), sensation. What Patañjali calls viṣayavatī pravṛtti, VB calls divya (extraordinary) saṃvit, in the sense that it is a sensory experience aroused without any external stimulus impinging on the corresponding sense organ. Thus if a yogī hears an internally aroused sound Vyāsa would call it a divya śabda saṃvit.

saṃvida संविद (VB, VBh I 35), (to be) conscious of. The consciousness of supernatural smell which comes to one concentrating on the tip of the nose. Such consciousness dispels saṃśaya and opens the door to samādhiprajñā. saṃvega-1 संवेग-१ (YS I 21), speed. Tīvrasaṃvega yogīs are those whose progress in yoga is rapid. This speedy progress itself is said to be of three degrees (cf. mṛdu, madhya and adhi-

saṃvega-2 संवेग-२ (YSH II 15), one of the five characteristics of samyaktva सम्यक्त्व (perfection in yoga). It is mokṣa abhilāṣā अभिलाषा (desire for liberation).

mātra).

saṃvedana-1 संवेदन-१ (YS IV 22), introspection-direct knowledge which is knowledge with a difference. Puruṣa has such a knowledge of its own buddhi (citta and its vṛttis). Citta cannot introspect itself (YS IV 21).

saṃvedana-2 संवेदन-२ (YS III 38), knowing how to do something. If a yogi acquires skill in raising his prāṇa² he can also take it out of his body and along with it his citta. Thus he can leave his body at will. The commentators believe that reference is to such a yogi creating many bodies, entering each of them and acting simultaneously with all of them. But a greater probability is that Patañjali refers to a yogi leaving his body at will after acquiring vivekakhyāti (the supreme realization), or when yogi thinks that his

present body cannot endure any longer, i.e., he sees what *Patañjali* calls **prakṛtyāpūra**. In the latter case he enters another foetus, in the former he does not.

Reference here is obviously to leaving the body at will. This is what *Patañjali* calls **paraśarīrāveśa** (entering another body).

saṃśaya-1 संज्ञय-१ (YS I 30), doubt (lack of certainty or confidence). It is mentioned as one of the nine obstacles in the path of yoga, obviously because it gives rise to diffidence which always retards progress. For success in any endeavour it is necessary to have confidence in oneself (cf. śraddhā).

saṃśaya-2 संशय-२ (YKU I 59), doubt.
One of the ten obstacles in the practice of yoga. The other nine are roga रोग (disease), pramattatā (carelessness), ālasya (sloth), nidrā (sleep), virati (cessation), bhrānti (delusion), viṣaya (worldly affairs), anākhya (what could not be adequately described) and alabdhiyogatattva (nonaptitude for the understanding of the truth of yoga).

saṃsarga संसर्ग (BY VIII 32), contact, association.

saṃsāra-1 संसार-१ (SK 45), transmigration. Rāga which is predominantly rājasa-though it is rajasa-tamasa like the tanmātrās and their differentiations- is responsible for a soul adopting one body after another, while vairāgya and jñāna lead to kaivalya.

saṃsāra-2 संसार-२ (VB II 15), the cycle of birth and death. One of the four aspects of the *yogaśāstra*. The other three, in the sequence are the cause of saṃsāra, liberation and the means of liberation.

saṃsāramocana संसारमोचन (ATU 19), freedom from transmigration. The idea seems to be that the *yogī* who goes the whole hog in tārakayoga is liberated; though the ordinary meaning of the text would be that whoever recites the *Advayatāraka-Upaniṣad* gets mukti (liberation).

samskāra संस्कार (YS I 50, II 15, III 9, 10, 18, IV 9, 27), potentiality of a behaviour, or consciousness, or both. It may be innate or acquired. It is believed that the dispositions which are innate, so far as the present life is concerned, have been acquired in previous lives. Behaviour and consciousness leave their aftereffects behind and these determine subsequent behaviour and consciousness. VB's mention of vrttisamskāracakra (cycle of vrttis and samskāras) shows his keen insight into psychology. Vāsanās are also saṃskāras and their abhivyakti अभिव्यक्ति (resulting into action or consciousness) is the vrttis motivated by them. VB considers dharma and adharma (merit and demerit respectively) also to be samskāras. They are said to bring us pleasure and pain respectively. But only if the pleasure and pain referred to, are

due to our conscience being satisfied, or other-wise, can **dharma** and **adharma** be explained as the aftereffects of our past behaviour, satisfaction of conscience being pleasant and stings of conscience highly unpleasant - at times positively painful. Pleasure and pain would thus be the hedonic tone of the **vipāka** of our **karmāśayas**. But they are generally supposed to be the **phala** of our actions-**karmaphala**.

The ancient Indians believed that the kind of life and the environment in which we are born are determined by the **vāsanās** we had developed in our previous lives.

Plato has given a picturesque description of this theory in his Dialogues. As he puts it allegorically, the souls of the dead are given a dip in a river. As they emerge from the water they forget all about the life they have lived. In course of time, models of different lives are presented to them and they are asked to choose one. Strangely enough without knowing anything about it, their choice is determinedly their own vāsanās. While the memory of previous lives were completely wiped out, the saṃskāras formed in them were not washed away.

saṃskāraduḥkha संस्कारदु:ख (YS, VB II 15), pain caused by the subliminal impressions. The experience of pleasure or pain (on particular occasion) awakens the subliminal impressions of previously experienced pleasure or pain which gives rise to memory and accordingly there is attachment or aversion and then there is activity and this again results in pain and in turn to subliminal impression and so on endlessly.

saṃhatyakāritva संहत्यकारित्व (YS IV 24), co-operation. Citta¹ considers itself to be the Supreme Self, which it is not (cf. parārtha¹). It forgets that it is whatever it is because of its beginningless association with a puruṣa¹. It depends for everything-even its own existence-or its being connected with a puruṣa¹ in this manner. That it remains oblivious of this, is a different matter. This dependence is parārtha² in another sense.

sakala सकल (SAU III (1) 5), one of the three forms of brahman i.e. divisible forms. When brahman co-exists with primordeal matter (mūlaprakṛti) and illusion (māyā) bears three qualities-lohita, śukla and kṛṣṇa, brahman also acquires the divisible form. This form is called sakala form of brahman. The other two forms are niṣkala and sakala-niṣkala.

sakalaniṣkala सकलिकल (SAU III (1) 3, 6), one of the three forms of brahman. The sakala-niṣakala form is neither perfectly simple nor completely differentiated. As compared to his completely uncomplicated form he is brahman with his śakti (māyā). But he is undifferentiated as compared to the creation as we find it.

sakalāmaya सकलामय (HP II 28), several diseases. Disorders of spleen and other glands. dropsy and diseases originating from vāta, pitta and kapha are cured through the practice of jalabasti.

sakriya सिक्रिय (SK 10), active. One of the nine characteristics of vyakta which distinguish it from avyakta. Vyakta is active, avyakta is inactive.

sagarbha सगर्भ (GS V 47-8), sagarbhasahita- prāṇāyāma is one of the two kinds of sahita-prānāyāmas, the other being nigarbha. According to Gheranda, it consists in first squatting on the ground with folded legs, either facing the east or the north, thinking of vidhi (brahmā) and inhaling with the left nostril (the duration of inhalation being sixteen mātrās), then performing uddiyana, thinking of hari (vișnu) and suspending respiration for sixtyfour mātrās, and then thinking of śiva and exhaling gently through the right nostril, the duration of exhalation being thirytwo mātrās. This process is to be repeated, closing the nostrils at the time of kumbhaka with two fingers and the thumb only without using the index or the middle finger.

saguṇadhyāna सगुणध्यान (G 77), dhyāna with attributes or characteristics. **Dhyāna** on objects with attributes such as form, colour etc. is called saguṇa.

saṅkaṭāsana संकटासन (GS II 28), one of the thirtytwo āsanas² enumerated by Ghetaṇḍa. It consists in firmly placing the upper part of the left shank on the ground, the right foot under the left knee and the two hands on the two knees.

saṅkalpa-1 संकल्प-१ (ANU 15; SK 27; VB III 45; TSB 6; BY II 136), wishing, desiring. This, according to SK, is one of the two functions of manas, the other being converting sense into percepts etc. Manas is saṅkalpaka (maker of saṅkalpa) antaḥkaraṇa. As an indriya, by virtue of simultaneous association, it perceives and imagines objects on the basis of the simple material brought by the sense and the karmendriyas.

According to ANU, considering manas as sańkalpaka of wishes and desires, the wise men should merge it in ātmā and keep it there. This is dhāraṇā according to this Upaniṣad. It resembles samādhi and Patañjali's samāpatti, though Patañjali does not bring in the ātmā.

saṅkalpa-2 संकल्प-२ (TBUI13), the sense of losing or regaining physiological homeostasis-, the experiences which are foreign to the person who has realised brahman and is therefore brahman Himself. Heat, cold etc. the dvandvas have no effect on such a person; and in this sense he is not a saṅkalpaka.

sankalpa-3 संकल्प-३ (HP IV 32, 58), thought constructions.

According to the philosophy accepted

by HP, the entire universe is a mental construction. **Laya** supervenes when all thought constructions cease. Though this too is an experience it cannot be described in words.

saṅkalpavarjita संकल्पवर्जित (GS VII 21), free from all desires. Thus what is called sanyāsa संन्यास yoga in the Ḡtā (VI I) is a prerequisite for samādhi according to Gheranda.

saṅkirṇa संकीर्ण (YS I 42), complex. The contents of savitarkā and savicārā samāpattis are complications. They are made complicated by the presence of vikalpas (associated ideas) which are described by Patañjali as being of the nature of the knowledge of meanings of words (śabda-artha-jñāna). These three words signify only an explanatory qualification of vikalpas as the term is defined by Patañjali in I 9.

saṅkhyā संख्या (YS II 50), number.
Prāṇāyāma gradually gains perfection
as the number of its repetitions increases. In Patañjali's words it becomes
more and more dirgha. Progress in this
dimension is said to be progress
measured in terms of saṅkhyā.

Prāṇāyāma becomes more and more perfect as the number of times, the $yog\bar{i}$ does it everyday, increases.

saṅga संग (YS III 51), attachment. An unswerving and abiding realization of the fact that **citta**¹ and **puruṣa**¹ are different, bring to the *yogī* power and omni-

science. Temptations come in this way, but he has to remain unattached in the face of all the worldly temptations. Otherwise he may fall from the position attained by him. Thus life after **viveka-khyāti** is a test. If the *yogī* passes this test he attains **kaivalya**.

saṅgṛhītatva संगृहीतत्व (YS IV 11), causal connection. Vāsanās (wishes-conscious or unconscious) are causally connected with dharmādharma (merits and demerits), sukhaduḥkha (pleasure and pain), rāgadveṣa (attractions and repulsions) and all the desired objects. Hence if these are controlled, vāsanās cease to be active. Patañjali calls these four causes hetu (motive), phala, aśraya and ālambana respectively.

saṅghāta संघात (TBUI7; SK 17), a combination (mixture). All the śānta, ghora and mūḍha are viśeṣas made up of the indriyas and the bhūtas and one of SK's arguments for proving the existence of puruṣas is that coming together (combination) of many things has always a purpose behind it. Hence there must be some entities whose purpose these combinations serve. These entities are puruṣas-the entities whose purpose the liṅgas, the mātāpitṛjas and the prabhūtas serve. This makes the philosophy of SK teleological.

saccidānanda सच्चिदानन्द (GS VII 4), brahman = ātmā, the One Supreme Reality of the nature of cetana (which is not consciousness in the ordinary sense of the word) and **ānanda** (bliss which is not pleasure in the ordinary sense). According to GS, the realisation that the aspirant is **brahman** and nothing other than **brahman** is the essence of **samādhi**.

sajātīya सजातीय (TBU I 18), ideas and

activities in keeping with brahmavṛtti, viz. all is brahman. These are to be adopted and those which are not in keeping with this belief to be eschewed. satkārya सत्कार्य (SK 9), the theory that the effect exists potentially in its cause before it actually appears. According to this theory, all the guṇapariṇāmaviśeṣas - the liṅgas, the mātāpitṛjas and the prabhūtas- are potentially there in avyakta (the undifferentiated reality). Their actual existence would not have been possible otherwise.

sattā सत्ता (VM II 19), existence. The existent (sat) is that which is capable of actions fulfilling a purpose, and having existence is the abstract form of 'existent'. Mahat is made of existent i.e., whatever action fulfilling a purpose there be, is comprehended in and through mahat or intellect.

satya-1 सत्य-१ (YS II 30, 36; TSM 32; DU I 6, 9; YSH I 21, II 53-64; BY II 63, VII 159), one of the yamas. It consists in saying only that what one has directly perceived, inferred, or learnt from a reliable source. The belief that all that is real is brahman and that nothing else

is real is the supreme **satya** according to the **vedānta** philosophy.

- satya-2 सत्य-२ (VS I 41), truth, one of the ten yamas. A person is said to speak the truth only when he or she fulfills three conditions:
 - speech must be in accordance with fact;
 - 2. he/she must be guided by good intention and justice;
 - 3. speech must be couched in agreeable words.

satya-3 (loka) सत्य-३ (लोक) (BY III 21), universe of satya. Last in the seven lokas enumerated in BY. This is said to be the adobe of brahman attainable through jñāna and karma accompanied by pursuit of satya¹.

satyaloka सत्यलोक = brahmaloka ब्रह्मलोक (NBU 4; VB III 26), one of the six higher regions of creation above the earth. According to NBU, it is the part of the forehead of hamsa between the eyebrows. Hamsa represents the virāṭarūpa (universal form) of the One Supreme Reality.

satyavādī सत्यवादी (SSP VI 61), speaker of truth. He is said to be satyavādī who is steadfast in intellect and speaks only after knowing that the truth is One, Uncreated, Eternal, Infinite, Immovable.

sattva-1 सन्त-१ (YS II 41; III 35, 49; TSM 7), *Patañjali* has used this word as a synonym for citta because of the predominance of the sattvaguṇa in it. This, according to *Patañjali*, is the distin-

guishing characteristic of **aindriya** (immaterial) reality. It distinguishes it from *bhautika* (material) reality.

sattva-2 सत्त्व-२ (SK 13, 54), one of the three gunas, the other being rajas and tamas. It is described as laghu (light in weight) and prakāśaka प्रकाशक (illuminating). Its lāghava (lightness) makes it immaterial and its prakāśa gives it the ability to develop consciousness. Citta is made up of indrivas, which takes form in sāttvika ahankāra. It is for this reason immaterial and have consciousness. The function of buddhi and buddhindrivas (the senses) is clearly prakāśa; but the Sānkhya philosophers consider the functions of the karmendriyas (action organs) also to be **prakāśa**; obviously because the function of the karmendriyas is not supposed to be actual movement, but conative consciousness. Thus **prakāśa** seems to stand for consciousness as modern psychologist understands this term and not for cetana, as the ancient Indians understood this word, nor for cognition alone.

sattva-3 सास्व-३ (TSM 164), being Śuddhasattva is, therefore, pure being, i.e. ātmā (= brahman).

sattva-4 सन्त-४ (SSP I 49, 50), one of the three guṇas of prakṛti and one of the five components of kulapañcaka having five characteristics: dayā (compassion), dhrama (virtues), kṛpā (mercy), bhakti (devotion) and śraddhā (faithful regard).

sattvabuddhi सत्त्वबुद्धि (YS, VB, VM III 49, 55), pure intellect. An intellect which is devoid of *rājasika* and *tāmasika* taints and thereby has attained a state of perfect clarity known as sattva (buddhi).

sattvaśuddhi सत्त्वशृद्धि (YSH IV 34-35), purification of mind, which is necessary for indriyajaya (conquest of immaterial reality). It implies kaṣāyajaya (complete control over the kleśas). The guṇas (good qualities) are futile without manaḥśuddhi (purification of mind). Rāga-dveṣanirodha is significantly mentioned as a means of manaḥśuddhi. As a result of manaḥśuddhi, ātmā is said to exist in its pure (true) form. This is the Jain view.

sattvāpatti सत्त्वापित्त (VU IV (1) 3, (2) 2, 6), the fourth bhūmi (stage of progress in yoga), and the first stage of jīvanmukti (emancipation before death). A yogī at this stage is called brahmavid (one who knows brahman). He has realised that he is the pure ātmā. This realization accrues to him as a result of having passed through the first three bhūmis and becoming disinterested in worldly objects. The yogī now looks at the world as a dream. This is an aspect of rājayoga.

sadguru सद्गुरु (SSP V 65-69), true teacher. In these verse appreciation for sadguru has been made. Only sadguru can make even the paramapada attainable in an instant. He is capable of cutting of the eight pāśas (jarā, maraṇa, kāma, krodha, lobha, moha, ahṃakāra and avidyā) of his disciple, through the sword of his compassion. Only sadguru can remove all the doubts arising in the mind of his disciple.

sadājīvī सदाजीवी (SSP VI 58), a variety of sādhaka who has proper understanding of jīva and also of the consciousness behind 'it' is called sadājīvī.

sadāśiva सदाशिव (YCU 72), the Lord of ākāśa which is all-pervading and is the most sāttvika of the bhūtas (elements) and which, according to this text, comes out first of all from the ātman. From ākāśa was created vāyu (air) and so on. This is the theory of this Upaniṣad.

santuṣṭi सन्तुष्टि (TSM 33), contentment. It is one of the ten niyamas (observances) according to this *Upaniṣad*. Patañjali's word for this is santoṣa.

santoṣa-1 सन्तोष-१ (YS II 32, 42; VU V 13; SAU I (2) 1, 3; YSH 59), contentment. It is one of the niyamas (observances). It consists in remaining contented with what is in one's possession, i.e. not hankering and ever exerting for getting more and more. Asantoṣa असन्तोष (discontentment) is said by YSH to be a result of gardha गर्ध, which word is used by Vyāsa to explain rāga. Vyāsa also mentions tṛṣṇā (thirst) and lobha as synonyms of gardha (VB II 7).

santoṣa-2 सन्तोष-२ (VS I 55; DU II 4, 5),

contentment. One of the ten **niyamas**. One must be contented with whatever is gained spontaneously, such an attitude of mind is called **santosa**.

According to DU, the supreme contentment consists in detachment for everything till one realizes the **brahman**.

sandhyā सन्ध्या (BY VI 1-30), an obligatory religious rite to be performed daily after bath in the morning, in the noon and in the evening, by every twice-born (dvija). It consists mainly of chanting savitṛmantra addressed to sun and is popularly known as Gāyatrī Mantra. It is called Gāyatrī, when performed in the morning, Sāvitrī when performed in the noon and Sarasvatī, when done in the evening.

sanyāsī सन्यासी (SSP VI 37; BG V 1; VB IV 7), an ascetic. One who experiences ātmā and paramātmā in one's own self, and never expects any reward for his action, is called sanyāsī. The actions of a sanyāsī are called aśuklākṛṣṇa.

saptapātāla सप्तपाताल (SSP III 2), seven worlds under the earth enumerated as pātāla, talātala, mahātala, rasātala, sutala, vitala and atala. All these Pātālas are assumed in the different parts of the human body, beginning from feet to thigh respectively reside in sole of the foot, big toes, tip of the big toes, back position of the feet, ankle, knee and thigh. Knowledge of these pātālas is essentially required for piṇḍasaṃvitti

which in turn leads to self-realization. saptasādhana सप्तसाधन (GS I 9), seven aids (for conditioning the body). These are śodhana (purification), dṛḍhatā (firmness), sthairya (steadiness), dhairya (composure), lāghava (light-ness), pratyakṣa (realization) and nirliptatā (isolation), which come through the practice of ṣaṭkarmas, āsana, mudrā, pratyāhāra, prāṇāyāma, dhyāna and samādhi respectively.

saptasnāna सप्तस्नान (BY VII 163), seven types of bath. For the person who is weak or old, the authorities have suggested different forms of bath to purify the body. These are mantra, bhauma, āgneya, vāyavya, divya, vāruṇa and mānasa.

sabījasamādhi सबीजसमाधि (YS I 46), savitarkā, nirvitarkā, savicārā and nirvicārā samāpattis are thus called. Sānandāsmitā सानन्दास्मिता samāpatti is not included, obviously because it is a form of samāpatti in which the samādhiprajñā (content) is not a viṣaya. The content of samāpatti in not a viṣaya only in nirbījasamādhi, in which the yogī experiences ānanda (bliss) and asmitā. These two objects are not supposed to be viṣayas-neither gross nor subtle. Nevertheless, nirbījasamādhi is samprajñāta yoga.

If it is considered to be **asamprajñāta** as *Vyāsa* does, then there would be left no **samādhi** in which the **samādhi prajñā** is **ānanda** or **asmitā**, because

he clearly lays down that there is no sabijasamādhi apart from the four samāpattis of which the contents are sthūla and sūkṣma, vitarka and vicāra.

samatā समता (TBU I 28), equilibrium.

Ninth in the series of fifteen-fold yoga recognised by TBU. This consists in perfect equilibrium among the gross, subtle and causal bodies to enable its dissolution in well poised brahman.

samatva समत्व (BG II 48), equanimity in success and failures. One who performs action without any attachment towards reward is called having the samatva attitude of mind.

samanu समन् (GS V 36-7), one of the two methods of nādīśuddhi, the other being nirmanu. It consists in first adopting the padmāsana pose and offering prayers to the guru and the gods; and then contemplating the vayu bijainhaling through the left nostril (the duration of inhalation being sixteen mātrās), stopping respiration (for the duration of sixtyfour mātrās) and exhalation being thirtytwo mātrās). After this the $yog\bar{i}$ raises the vahni (fire) of the prthvi tattva (the earth element) from the navel region and contemplates it- inhaling with the right nostril for sixteen mātrās, suspending breath for sixtyfour mātrās and exhaling with the left nostril for thirtytwo mātrās-all the time reciting mentally the vahnibija ram रं.

In the end, the $yog\bar{i}$ contemplates the moon with her rays localizing the image just in front of him-and inhales for the duration of sixteen mātrās through the left nostrils, stops breathing for sixtyfour mātrās and exhales for thirtytwo mātrās. While inhaling, the yogi mentally recites the tham (ਤਂ) bija, during suspension of breath he recites the vam (ব্) **bija** and during exhalation the *lam* (ল) bija. At the time of kumbhaka the $yog\bar{i}$ imagines that the amṛta (nectar) flowing downwards is purifying all his nādīs. We should be perfectly confident about the result. All this, which is ordinarily known as prāṇāyāma, is called samanu-nādī-śuddhi by Gheranda and is performed, according to this thinker, by way of preparation for prāṇāyāma proper.

samanvaya समन्वय (SK 15), uniformity underlying diversity. This is one of the four reasons adduced by SK in support of the theory that the ultimate material cause of the manifold vyakta is the one avyakta. Uniformity implies unity in diversity. Vyakta is the multifarious form of avyakta. In fact the latter is not a form at all. It is only a matter of which all manifestations are forms. It is the formless which is ultimately the root cause of all the various forms. It is itself not the form of any other matter. This is the Sāṅkhya principle of "Unity of Nature".

samabhāva समभाव (HP II 21), balanced

condition of vāta, pitta and kapha. Sādhakas in whom three humours are in balanced condition, need not practise the six cleansing processes.

samarasatva समरसत्व (HP IV 6), the state of equilibrium, a synonym for samādhi. When the life activity dwindles and mental activity also ceases, then there arises the state of equilibrium.

samarasaikatva समरसैकत्व (G 94), the "allmerged-into-one" state. In the state of samādhi, according to this text, neither is prāṇa active in any sense, nor is there any cittavṛtti (consciousness). Ātmā and ātmā alone is there. Everything has disappeared in ātmā.

samasaṃsthāna समसंस्थान (VB, VM II 46), a posture having even arrangement of the body. One of the eleven āsanas enumerated by *Vyāsa*. *Vācaspati* describes its technique as the two feet contracted and pressed against each other at the heels and at the tips of the feet.

samākṣipta समाक्षिप्त (G 27), struck by.
Driven by prāṇa and apāna, the jīva
(living being) goes here and there and
everywhere in the body. In fact prāṇa,
apāna, etc. constitute jīvana (life) and
they appear as if they were a jīva
(jīvarūpiṇaḥ). Once a jīva is posited,
we can say that it is wherever prāṇa,
apāna, etc. are. This is what is meant
by saying that the jīva is drawn hither
and thither by prāṇāpāna, i.e. prāṇa,
apāna, udāna, vyāna, samāna, nāga,

kūrma, kṛkara, devadatta and dhanañjaya.

samādhi-1 समाधि-१ (YS I 20, 46, 51, II 2, 29, 45, III 3, IV 1; GS I 11, III 30, 42, V 82, VII 1, 3, 8, 13, 15, 21; HP III 121, IV 2-8, 81, 108-9, 111), a state of concentration of which the characteristic feature is that in this state the self is completely forgotten. Samādhi¹ is brought about by samāpatti, which consists in the subject of consciousness merging into the object of consciousness, and thus there remaining no consciousness as ordinarily understood, as there is no subject-object relation in that state. Thus samādhi does not fall within the scope of normal psychology as understood at present.

Patañjali calls samādhi a kind of dhyāna, because of the single content of consciousness in the state of samādhi.

For GS, samādhi¹ consists in detaching manas from the body and identifying it with ātmā. It is the means for accomplishing the sādhanā which Gheraṇḍa calls nirlipta; and since this author equates nirlipta with mukti (GS I 11) samādhi is the means by which the yogīs attain emancipation. Again these vedānta-minded yogīs often identify samādhi and rājayoga which they consider to be the pinnacle of yoga. Thus śāmbhavī, khecarī and yonimudrās, mūrcchā and bhrāmarī prānāyāmas and bhakti are, accor-

ding to these $yog\bar{i}s$, the six processes of which the end result is $r\bar{a}jayoga$ or $sam\bar{a}dhi$.

According to HP, samādhi ensues if there is samāpatti in nāda or in brahman-here called ātmā.

samādhi-2 समाधि-२ (YS III 37, IV 29), a state of living perfectly unmotivated by any kleśa or vāsanā. The characteristic feature of this state, according to Patañjali, is that the yogī in this state does not swerve at all from what he calls vivekakhyāti. Patañjali names this state as dharmamegha-samādhi, as in this state, everything mundane is cast away (cf. dharma).

samādhi-3 समाधि-३ (NBU 54; YCU 113), a state of temporary mokṣa in which the body becomes as if it were quite dead; yet the man is alive and is supposed to be seeing the Supreme Light (brahman).

samādhi-4 समाधि-४ (SAU I (1) 2-3 (11); YTU 107; VU II 75; HP IV 5-7), merging of jīvātmā (individual self) into the paramātmā. Samādhi of these *Upaniṣads* is samāpatti in ātmā² (= paramātmā) and nothing else.

samādhi-5 समाधि-५ (TBUI37; TSM 162; MBU I (1) 10), absence of all vṛttis. This is a state of absolute void so far as the mind is concerned. Nevertheless, according to the vedānta philosophy, it is a state of cetanā, which is the original spiritual consciousness, as opposed to mental activity - our ordinary mundane consciousness. samādhi-6 समाधि-६ (DU X 5; ANU 16), realization that everything except brahman is illusory.

samādhi-7 समाधि-७ (VS IV 57-66), the eighth limb of aṣṭāṅgayoga enumerated by Vasiṣṭha. The state of identifying individual self with Supreme Self or the merging of individual self in the Supreme Self. Being possessed of yoga etc., conquering the prāṇa, subduing the senses and being associated with dhāraṇā and dhyāna, one should practise samādhi.

samādhi-8 समाधि-८ (SSP II 38), the equinimous state of all the elements, withdrawing from the object of senses are the characteristics of samādhi.

samādhiparināma समाधिपरिणाम (YS III 11), a lakṣaṇa-pariṇāma of citta². This parināma is a succession of many avasthāparināmas of the citta² and a succession of these parinamas of the citta² is its dharmaparināma, which is called nirodha by Patañjali. Avasthāparināmas of citta² Patañjali calls ekāgratāpariņāmas. Samādhiparināma is described by Patañjali as the exclusive possession of the field of consciousness by an object for some time; in other words a continuation of ekāgratāpariņāma. A continuation of samādhiparināma is nirodhaparināma.

In this way nirodha is continued samādhi and samādhi is continued ekāgratā; and ekāgratā being a

dhyāna (= pratyaya-ekatānatā), samādhi is continued dhyāna.

samādhisiddhi समाधिसिद्धि (YS, VB, VBh II 45), attainment of samādhi. Devotion to iśvara results into breaking open the pathway towards samādhi because devotion to **iśvara** removes the delusion, ignorance and the sādhaka gets the capacity to know all that he desires to know, as it is in truth. samāna-1 समान-१ (YS III 40; DU IV 23, 29, 31; ANU 34, 37; GS V 60; G 24; SAU I (4) 12-3; BY IX 132), one of the ten vayus. Since it pervades the whole body the function of samana would be to provide oxygen, water and food to all the parts of the body. Some writers on yoga, however, ascribe this function to vyāna. According to ANU, samāna resides in the navel region and is white like the cow's milk. It is here supposed to be responsible for assimilation of food, as it provides nourishment to all the organs of the body. In fact the distribution is done by circulation, as the blood carries nourishment to all the organs. Whether samana should have to do with digestion or with circulation is therefore, neither easy nor important to decide; but since vvana is also said to be all pervading (cf. VB) it is generally associated with circulation and samana with digestion.

According to $V\bar{a}caspatimi\acute{s}ra$, $sam\bar{a}na$ is so called because it carries the essential fluids of the body to all the parts

equally well. According to the *Suśruta*, samāna digests the food in the stomach in co-operation with animal heat and propels chyle, blood and the other fluids.

samāna-2 समान-२ (VB, VM, VBh III 39; VS II 42, 48, 49, 52), one of the five important vayus of the group of prana etc. Samāna is so called because it distributes (food) equally to all parts of the body and manifests itself upto the region. VBh explains samāna as 'since it distributes the essences of food according to nature to all the nerve centres therefore it is called samāna²,. VS enumerates it under ten vavus and considers it as one of the five prominent vāyus. It pervades all the parts of the body, wandering through the seventytwo thousand nādīs in the body. It supplies the digested essence of all edibles to each and every limb of the body with the help of the gastric fire. Nutrition of the body is also ascribed to the function of the samānavāvu.

samānābhihāra समानाभिहार (SK 7), mixing up with other, apparently identical objects. Such a confusion of mind is one of the eight circumstances in which it becomes impossible to know something. If the object which we are seeking gets thus mixed up with a number of other extremely similar objects, e.g. a pearl among pearls, a bean among beans, an Indian among Indians, then it becomes difficult to differentiate that object from other similar objects.

samāpatti-1 समापत्ति-१ (YS I 41, 42; II 47, III 42), merging of the knowing citta¹ into the object known. In this $S\bar{u}tra$ Patañjali has used the word grahītr for the knowing citta, grahana for consciousness and grāhya for the object of which the grahitr is conscious. Of these according to Patañjali, the grahītr, for which he has used the word tatstha, assumes the form of the grāhya, here called by him tad, just in the same way as a clear crystal placed on a coloured object is seen as of the colour of the object. Samāpatti is the essence of samādhi according to Patañjali. Patañjali describes four forms of samapatti and calls them to be the only four kinds of sabijasamādhi.

Ananda and asmitā are not considered to be viṣayas by Patañjali. Nevertheless, samāpatti in them is possible. This is what occurs in nirbījasamādhi. Samādhi is a state of the mind. What happens in that state is samāpatti and samāpatti with an object in view is saṃyama.

samāpatti-2 समापत्ति-२ (VBh I 40), attaining clearly the form of the support i.e., an activity of direct perception of the object. It is only in samāpatti direct perception of objects in their totality can be grasped and not in dhāraṇā, dhyāna and samādhi, because the later concern themselves with only objective aspect of reality and not with their totality.

samāsīna समासीन (HP I 19; GS II 13, 31) well composed psychophysical state conducive to meditative postures.

samāhitacitta समाहितचित्त (VBh II 1), concentrated mind i.e., the best aspirant, taking into account only the means of abhyāsa and vairāgya. Vyāsa declares that the samādhipāda of yogasūtra meant for concentrated mind or the best aspirant of yoga.

samīkaraṇa-1 समीकरण-१ (TSB 6), function of the samāna vāyu. It may mean assimilation (absorption), which is responsible for nourishing the body.

samīraṇa-1 समीरण-१ (HP II 10), air which one breathes in and breathes out.

samīraṇa-2 समीरण-२ (HP III 62, IV 22), prāṇa. It is the experience of many yogīs that as they inhale samīraṇa¹, samīraṇa² is felt rising inside. They therefore, often considered the two to be the same thing and believed that what they inhaled rose to their head.

samudaya समुदय (SK 16), combination here interaction of guṇas. It is one of the two ways in which avyakta subsists, the other being just the presence of the three guṇas without any activity. Mixture of these elements in various ways results in the appearance of the various forms of reality.

sampuṭayoga सम्पुटयोग (VU V 45), mūlabandha, which is so called probably because it affects all the nāḍis²-the entire nāḍicakra-and raises up along the suṣumnā, udāna along with prāṇa. It is catuṣpatha bandha (VU V 43), because it affects all the four principal nāḍīs² and opens up one of them viz. the suṣumnā. According to *Upaniṣadbrahmayogī*, these four nāḍīs are susumnā, idā, piṅgalā and kuhū.

samprajñāta सम्प्रज्ञात (YS I 17), a state of samāpatti in which the citta2 has merged itself in a gross or a subtle object, or in ananda (bliss) and asmita (the true self). The significance of this $s\bar{u}tra$ is that yoga is sampraj \tilde{n} āta by virtue of the presence of vitarka, vicāra, ānanda or asmitā as the content of consciousness. The anya (other) yoga (YS I 18), which may be called asamprajñāta yoga, is that in which there is no content neither vitarka, nor vicāra, nor ānanda, nor asmitā. Of these the former two alone are visavas; and for this reason, Patañali calls savitarkā, nirvitarkā, savicārā and nirvicārā samāpattis as sabījasamādhi and the one in which the samādhiprajñā consists of ānanda and asmita, not considered by him to be visayas, nirbijasamādhi. In this way samprajñāta samāpatti is of two kinds, sabīja and nirbīja. Patañjali's other yoga is neither nirbija nor sabīja.

samprayoga सम्प्रयोग (YS, VBh II 44) perception, communion. As a result of the practice of svādhyāya, one attains communion with the desired deity. Whichever deity he desires to see, that

deity becomes perceptible to a $yog\bar{i}$ who has perfected $\mathbf{sv\bar{a}dhy\bar{a}ya}$.

samyagjñāna सम्यज्ञान (SK 67, 71), comprehensive, correct grasp (knowledge) of Reality-true knowledge. After gainning true knowledge (supreme Realization), the body goes on by its own momentum and the actions are all motiveless in this sense. Bodily activity is said to be impelled by previously acquired saṃskāras; but no new saṃskāras are being formed while it goes on in this manner. Thus the action performed after Realization are not karmas. They do not bear fruit.

samyagdarśana सम्यदर्शन (VB, VBh II 15), true perception. One who knows that the cause of saṃsāra is the contact between puruṣa and prakṛti and thus takes refuge in true knowledge i.e. the cause for the removal of all pain called samyagdarśana.

samyagdarśin सम्यग्दर्शिन् (VB IV 23), true seer.

sarasvatī-1 सरस्वती-१ (DU IV 7, 14, 16-7,21,35; VU V 25), one of the principal nāḍīs. It is situated by the side of suṣumnā (in the spinal cord) as is kuhū. Iḍā and piṅgalā are situated to the left and right side of suṣumnā respectively. On which side kuhū and sarasvatī are situated, is not mentioned in DU. Perhaps pārśva पाइचे only indicates proximity. This nāḍi is here said to extend to the end of the tongue-probably the root of the tongue. Its

presiding deity is **vairāja**. According to VU, **sarasvatī** is situated at the back of **suṣumnā**.

sarasvatī-२ सरस्वती-२ (SAUI(6)3), one of the three forms of the makāra mūrti (figure)-on which the yogīs are advised to meditate when they practise prāṇāyāma², and recite om, the other two forms being gāyatrī and savitṛ. Sarasvatī is described as dark complexioned, riding an ox, wielding a trident and looking elderly.

sarasvatī-3 सरस्वती-३ (VS II 31, 37), one of the fourteen important nāḍīs. It is situated on the side of suṣumnā and its region is extended upto the upper part of the tongue.

sarga-1 सर्ग-१ (SK 24, 52-4), innumerable patterns formed by the three guṇas¹ combining in innumerably different ways. Thus there are innumerable liṅgas, innumerable strengths of the eight bhāvas, innumerable types of life and innumerable experiences possible in these lives. These are the liṅga, bhāva, bhautika and pratyaya sargas respectively.

Īśvarakṛṣṇa has not mentioned a sarga of material objects, though these too are formed as the result of the guṇas mixing in innumerable ways. But he does mention a tanmātrā sarga in Kārikā 24; and as the material objects are made of the bhūtas and these in their turn of the tanmātrās, this tanmātrā sarga may be taken to be

the sarga of material objects. The other sarga mentioned in this (24) $K\bar{a}rik\bar{a}$ -the eleven indriyas would thus include the liṅga, bhāva and pratyaya sargas. The bhāvas inhere in liṅgas and the pratyayas are their experiences. All of them together form what $Pata\tilde{n}jali$ would call aindriyātmaka, dṛṣya. Thus there would be two main sargas, \bar{l} śvarakṛṣṇa's bhautika sarga being a combination of the two sargas mentioned in $K\bar{a}rik\bar{a}$ 24. $Pata\tilde{n}jali$ would call these two indriyas and tanmātrāsargas as aindriya and bhautika respectively.

sarga-2 सर्ग-२ (SK 21, 66), pratyayasarga = experiences of purusas², who are lingas in samyoga with purusas1. After attaining kevalajñāna, purusa² no longer has any experiences motivated by these seven bhavas and performs no actions motivated by dharma, adharma, ajñāna (ignorance) rāga or aiśvarya. Virāga and anaiśvarya never prompt any action. Thus there is a jñāna-vimokṣa interval during which puruşa2 does not perform actions motivated by the seven **bhāvas**. Jñāna (true knowledge) and jñāna alone is the motive which impels his actions (cf. samyagjñāna).

sarvajñabīja सर्वज्ञबीज (YS, VB, VM I 25), glare of omniscience. **Īśvara** has been designated as element where resides germ of unexcelled omniscience. The processes of knowing subtle

objects either singly or collectively, whether in the past, present or future, either small or great, is the germ of omniscience. However, according to VBh, omniscience consists in possession of such knowledge which is beyond the senses.

sarvajñātṛtva सर्वज्ञातृत्व (YS, VBh III 49), attainment of the state of omniscience. One who has attained the knowledge of differentiation between pure or sattva intellect and purusa, there comes omniscience. Omniscience means simultaneous rising of knowledge born of discriminate discernment with references to the gunas which are the essence of all things and which are manifested as past, present and future states of existence. This is a perfection called **viśokā**, attaining which the $yog\bar{i}$ becomes omniscient. Omniscience is the simultaneous knowledge of all purușas.

sarvadharma सर्वधर्म (VS I 31), common duties assigned to all. Vasistha recognizes yoga practice as common duty assigned to all. He recommends it for all irrespective of caste and creed. In other words, yoga broadens the outlook of its practitioner who developes a sense of humanitarianism, in which no discrimination is made among castes, creeds and religions. The secular nature of yoga had been duly recognized by Vasistha.

sarvanirodha सर्वनिरोध (YS I 51), cessa-

tion of all (modifications of mind), complete destruction of **prajñā** and its subliminal impression. This is the state of **nirbīja samādhi**. When the mind turns away from activity i.e. after **sarvanirodha**, the **puruṣa** stays in its own form and is therefore called free, isolated or liberated.

sarvabhāvādhiṣṭhātṛtva सर्वभावाधिष्ठातृत्व

(YS III 49), supremacy over all states of existence. One who has attained the knowledge of differentiation between sattva or pure intellect and puruṣa, there comes supremacy over all states of existence. The guṇas which are the essence of all things which have both the determination and objects of determination as their essence present themselves before the owner. It gives the capacity to function as in one's own body according to one's own will with reference to prakṛti, its effects and the puruṣas.

sarvabhūtarutajñāna सर्वभूतरुतज्ञान (YS III 17), knowledge of sounds produced by living beings. As a result of the practice of saṃyama on the word, its intended object and the idea conveyed through it, the sādhaka acquires the knowledge of the sounds of all living beings (creatures).

sarvaratnopasthāna सर्वरत्नोपस्थान (YS II 37), gain of all the gems or surrounded by wealth from all places. One who has perfected non-stealing (asteya), jewels from all directions come to him. However, Dr. Karambelkar (commn. on P.Y.S. published by Kaivalyadhāma) considers its meaning as custodian of many treasures'. One who will be very sincerely trying to adhere to the **yama** of **asteya**, would be recognized by all as a person of utmost honesty and when such occasions may arise, everyone would want to entrust their valuables to the custody of such person only and in that sense he is surrounded by wealth from all places.

sarvaroga सर्वरोग (HP II 16, V 22), all diseases (arising out of the erroneous practice of prāṇāyāma). A list of such diseases has been given by Svātmā-rāma in HP II 17. Diseases like hiccup, asthma, cough and pain in the head, ear and eyes arise as consequences of erroneous practice of prāṇāyāma or disorder of pavana (vāta humour).

sarvārtha सर्वार्थ (YS, VB, VBh, III 11, IV 23), attention to all things. This has been considered as one of the characteristics of citta as opposed to another characteristic i.e. one pointedness. The sarvārtha state of citta has been explained by VBh as vikṣipta state of citta.

sarvasambhavābhāva सर्वसम्भवाभाव (SK 9), impossibility of everything developing in everything. It is one of the five reasons given by SK in support of the Sāṅkhya's theory of satkāryavāda. Since only certain phenomena result from certain other phenomena and not

every phenomenon from every other phenomenon, the consequent phenomenon, which is the effect, must be potentially present in the antecedent phenomenon which is the cause, i.e., an effect and its cause cannot be completely disconnected. Causation is not a matter of mere succession of phenomena. This is the Sāṅkhya view known as satkāryavāda.

sarvasākṣi सर्वसाक्षी (YCU 72), the absolute Reality in living beings. It is not one of the enjoyers like the viśva, taijas and prājña puruṣas, because its sākṣitva is not a function or a state, and yet all of us are That. This is like the monistic Vedāntic theroy.

savikāra सविकार (BG XIII 6), with the modifications of **prakṛti** (beginning with great element and ending with fortitude).

savicārā सविचारा (YS I 44), Patañjali calls samāpatti in a sūkṣma viṣaya, which is complicated by simultaneous associations called vikalpas in I 42 and smṛti in I 43, as savicārā samāpatti (cf. samprajñāta).

savitarkā सिवतको (YS I 42), according to Patañjali, samāpatti in an object which is not sūkṣma, i.e. of which the yogī can raise an image in his mind, and which is complicated by simultaneous associations here called vikalpas-is-savitarkā samāpatti. In I-43 Patañjali uses the word smṛti for such simultaneous associations. Accor-

ding to Dr. Karambelkar (commn. on PYS, pub. by Kaivalyadhāma), the meaning of vitarka should be taken uniformly throughout the PYS, and Patañjali himself defines vitarka in II. 34 as anti-yamas or evil or bad ideas, thoughts, emotions, actions etc. Thus savitarkā which is first in the series of four varieties of samāpatti is to be understood as samāpatti in which the arising of vitarka (II. 34) is the dominant aspect.

savitā सविता (BY IX 56), Vedic Sun god. Because of the functions of savana (generation) and pavana (purification) it is called savitā.

savyanāḍi सव्यनाडी (HP II 49), the left nostril (cf. sūryabhedana).

sasvana सस्वन (HP II 51), with sound. The technique of ujjāyī involves the production of a smooth frictional sound during both pūraka and recaka phases. One should keep the mouth closed and then draw the air in through both the nostrils producing the sound in such a manner that the air is left touching the region from throat to the chest.

sahaja सहज (HP IV 4, 9, 11, 75; GS VII 17), rājayoga, samādhi.

sahajolī सहजोली (HP III 90-91, IV 14; YTU 27), one of the two variants of vajrolī, the other being amarolī. This is a state in which the yogī or the yoginī, after successfully mixing the secretions from the upper and the lower

parts of **suṣumnā** by **vajrolī**, forthwith besmears his or her body with the ashes of burnt cow-dung made into a paste by adding water and sits in perfect bliss doing absolutely nothing for the time being.

sahasrāra सहस्रार (ATU 13; GS VI 9), the highest dhyānasthāna (centre for meditation) on the topmost part of the head. It is compared to a thousandpetalled lotus. To be able to control all the psycho-physical activities, the cerebrum must be able to send forth impulses in thousands of directions. The antarlaksva of śāmbhavīmudrā is sometimes described as being of the nature of a burning light in the sahasrāra. According to GS, in sthūla dhyāna the yogī may imagine his guru² seated on a throne in a triangle inside the ovary of the twelvepetalled lotus which, in its turn, is imagined in the ovary of this thousandpetalled lotus. The dhyānasthānas are often referred to as lotuses.

sahita सहित (HP II 72; GS V 46-7), one of the two well-known forms of kumbhaka (= prāṇāyāma). It is prāṇāyāma complete with pūraka, kumbhaka and recaka and is of two kinds-sagarbha and nigarbha. The former appears to be for those who believe in the gods vidhi, hari and śiva, the latter for those who do not. The two points of difference between nigarbha sahita prāṇāyāma and the sagarbha

one are: (1) in the latter the duration of **kumbhaka** is estimated by repeating some **mantra** or the other so many times, while in the former it is estimated by rotating the left palm on the left knee so many times (cf. Yoga Mimāmsā, Vol VI, No. 2, Sept. 1956) and (2) in the latter the *yogi* calls up the images of the gods **brahmā**, **viṣṇu** and *maheśa* (śiva) to his mind, while in the former this is not necessary.

sahitakumbhaka सहितकुम्भक (VS III 28, 29), retention of breath accompanied by inhalation and exhalation. Here sahita refers to pūraka and recaka. Thus the term means kumbhaka alongwith pūraka and recaka. The intense practice of sahita kumbhaka leads to kevalkumbhaka.

sāmsiddhika सांसिद्धिक (SK 43), mature (= full-blown = fully fledged) from the beginning itself. It is one of the three kinds of **bhāvas**², the other two being prākṛta and vaikṛta. In fact there are only two forms of bhāvas, viz. natural and acquired. But the natural bhavas2 can further be divided into two kinds, viz. those which need a period of maturation and those which are competent from the beginning itself. The former abilities appear only when a certain stage of development has been attained. What is inborn is their potentiality. The samsiddhika ones, on the other hand, can prompt action soon after birth. They are full-blown from

the very beginning, just as the newly born sucks the mother's nipple without learning to do so (cf. vaikṛtika).

Whether we say that **prākṛtika bhāvas** are of two kinds:- **sāṃsidd-hika** and *āgamasiddhika* आगमसिद्धिक or we say that natural **bhāvas** are of two kinds: **prākṛtika** and **sāṃsiddika**, the meaning is the same.

sākṣātkāra साक्षात्कार (VU II 41), direct realization. When one understands 'I am the **brahman**' he realizes the truth directly.

sākṣitva साक्षित्व (SK 19), seeing passively, witnessing. It is one of the five characteristics of purusa which follow from His being other than the three gunas. A sāksī साक्षी (witness) is an observer from a distance-an observer who is not involved in what he sees. Nor is he in anyway affected by what he sees. Sāksitva, mādhyasthya, kaivalya and drastrtva can therefore be attributes of puruşa only when we think of him as an individual who is not in **samyoga** with anything *gunātmaka*. In samyoga with a linga, the same **purusa** is neither just $s\bar{a}ks\bar{i}$, nor a kevalin केवलिन्, nor mādhyasthya, nor a mere drastā.

sāttvika सान्विक (SSP VI 59, 60), variety of a person. One who has devotion towards other person and who is the ruler of his sense organs is called sāttvika. Another variety of sāttvika also has been explained. One who has comple-

tely realised the **haṃsa** and through **ajapā** experiences it in his own body, is called **sūksma sāttvika**.

sādhaka साधक (ABU 10), beginner in yoga. To become a sādhaka is the first step in the direction of mukti (emancipation).

sādhanā साधना (GS I 9), achievement. The sevenfold yoga of Gheraṇḍa entails seven achievements by the seven means which can very well be called the seven yogāṅgas of the ghaṭasthayoga taught in this text. These seven means are: ṣaṭkarma, āsana², mudrā, pratyāhāra, prāṇāyāma², dhyāna and samādhi¹; and the seven results achieved by these means are: śodhana, dṛḍhatā (hardness), sthairya, dhairya, lāghava, pratyakṣa and nirlipti निल्पित (detachment) respectively.

sādharmya साधार्य (SK 27), community of function. Manas² is saṅkalpaka (that which wishes and desires). But it is also an indriya because it is with the cooperation of manas that the ten indriyas perceive in the light of past experience and perform goal-directed actions, the elements of both being provided by the indriyas alone. Manas presents its material to buddhi as the eleventh indriya.

sāmānya-1 सामान्य-१ (SK 11), having no individuality. Every puruṣa is distinct, separate and unmixable with other puruṣas, while neither vyakta, nor

avyakta, possesses such individuality. One mother substance assumes innumerable *guṇātmaka* forms while the **puruṣas** are themselves, by their very nature, many. They are not so many forms of one and the same ultimate reality as objects of nature are. This is one of the features which distinguishes between **puruṣa** and **prakṛti**¹.

sāmānya-2 सामान्य-२ (SK 29), joint. Sāmānyakaraṇavṛtti is not the specific vṛtti of any karaṇa but a joint activity of all the karaṇas. The ten vāyus are said to be such vṛttis.

sāmānya-3 सामान्य-३ (VBI7), general and vague. Knowledge obtained by inference and testimony is predominantly sāmānya in this sense, while that gained by perception is viśeṣa (concrete).

sāmānya-4 सामान्य-४ (VB III 44), the common material stuff as opposed to the various forms which it takes; e.g., the mahābhūta pṛthivī is sāmānya in relation to the solid objects made of it. In this sense pṛthivī is sāmānya⁴ and earthen pot is viśesa.

sāmīpya सामीप्य (SK 7), nearness, meaning extreme nearness. It is one of the eight circumstances under which objects cannot be seen. Reference here is to visual perception only. Things touching the cornea cannot be seen. But in other kinds of perceptions nearness, far from being an obstruction, is a necessity; e.g., we can touch and taste things only when they are in actual contact

with our body. For vision, on the other hand, it is necessary that the image of the seen object must fall on the retina and for that some distance is necessary. All the same it is easier to see near objects than the distant ones.

sārūpya सारूप (YS I 4). According to Pañcaśikhācārya, the jñānavṛtti of puruṣa¹ is implied in the vṛttis of citta². VB consider saṃyoga to be its cause and has called it cittavṛttibodha (knowledge). This is vṛttisārūpya of purusa.

What happens by virtue of **saṃyoga** of **puruṣa** and **citta** is the **sārūpya** of the former and the latter. It is just passive "seeing" and nothing more. We may call it introspection.

When cittavṛttis are going on, saṃ-yoga is called puruṣa's¹ vṛttisārūpya; when there are no cittavṛttis it is said to be puruṣa's svarūpe'vasthānam i.e. the saṃyoga of puruṣa with a vṛtti-less citta¹.

sārvabhauma सार्वभोम (YS II 31), universal. The yamas are to be observed universally. When the vows are observed universally at all stages, towards all things, in every possible way without any exception, they are called sārvabhauma.

sāvayava सावयव (SK 10), a whole with distinct components. It is one of the nine characteristics which distinguish vyakta (manifested nature) from avyakta (unmanifested nature). Although the components are differentiations in the same matter, they are distinct from one another. **Avyakta**, on the other hand, is not a whole with such distinct parts. We cannot say what exactly it is; but whatever it is, it is something perfectly homogenous. We cannot distinguish one part of it from another.

sāvitrī-1 सावित्री-१ (SAU I (VI) 3), one of the three forms on which the yogīs are advised to meditate while performing prāṇāyāma² and reciting om². This form is described as śvetāṅgī श्वेतांगी (white feminine form), riding the sacred bird garuḍa गरुड़, weilding a cakra (= disc) and young in appearance. The other two forms which are the objects of contemplation, according to this text, are gāyatrī and sarasvatī.

sāvitrī-2 सावित्री-२ (VS III 7), the name of the Goddess that embody the third letter of praṇava 'ma'. Sāvitrī has to be meditated upon during the recaka phase of prāṇāyāma. She has been described as an old lady of above fifty years of white complexion having three eyes and she is riding on a bull with a spear in her hand. The other synonyms of this name are sarasvatī, māheśvarī and paścimā.

siṃha सिंह (YTU 29; GS II 3, 26; HP I 34), siṃhāsana.

siṃhāsana-1 सिंहासन-१ (SAU I (3) 1, 6; DU III 1, 6 (1-3); GS II 14-5; HP I 50-52), one of the principal āsanas¹. It con-

sists in pressing the two ankles below the scrotum on either side of the perineum-the left heel on the right side and the right heel on the left side-and placing the two hands on the two knees with fingers spread out, opening the mouth with the tongue protruded and fixing the gaze at the tip of the nose with mind composed. Swāmī Kuvalayānanda emphasizes sitting evenly on the heels with soles turned upwards, putting the whole weight on thighs and knees, stiffening the forearms, spreading out the fingers, throwing the jaws wide open, stretching out the tongue to its utmost limit and fixing the gaze at the centre of the eyebrows (cf. āsana).

GS prescribes to place the (front side of the) lower legs on the ground.

siṃhāsana-2 सिंहासन-२ (VS I 67, 73-75), name of an āsana. One of the ten āsanas enumerated by Vasiṣṭha. A posture wherein one keeps one's ankles (heels) under the scrotum (testicles) on the either sides of the perineum. The right side of the perineum should be pressed by the left ankle and left side by the right ankle, hands with spread out fingers on the knees, mouth wide open, gaze at the tip of the nose with composure.

siddha-1 सिद्ध-१ (TBU I 26, 39; ATU 5; HP I 13, 57, II 30, 34, III 7, 40, 49), perfect (successful) *yogi*. The perfection of **yoga**, according to this text, consists in becoming one with **brahman**. This is a **siddhi** according to this *Upaniṣad*. Sometimes, however, a *yogī* who has acquired supernatural powers (**siddhis**) as a result of practising **yoga** is said to be a **siddha**. These powers are supernatural in the sense that they can override the laws of **physics**; but they are all the same *prākṛtika* (= pertaining to **prakṛti**) and are in this sense natural. They have their own laws, which the **siddha** alone understands, other people do not.

siddha-2 सिद्ध-२ (HP I 34, 38-9, 43), siddhāsana.

siddha-3 सिद्ध-३ (BG X 26), perfected one. Who are by birth endowed with an abundance of the wealth of virtues, knowledge and renunciation.

siddhadarśana सिद्धदर्शन (YS III 32), vision of the siddhas. Siddha means those who move in the space between the earth and the sky. As a result of the practice of saṃyama on the radiance of mūrdhā, one gets the power of perceiving siddhas.

siddhapuruṣa सिद्धपुरुष (SSP V 53), one who knows and has experienced the five stages of sthūla, sūkṣma, kāraṇa, turya and turyātīta.

siddhānta सिद्धान्त (BY XII 35), an orthodox system of philosophy which is described by Hiraṇyagarbha, Kapila, Apāntaratama, Sanatkumāra, Brahmiṣṭha, Pāśupata and Pañcarātra. siddhāntaśravaṇa-1 सिद्धान्तश्रवण-१ (VU

V 14; SAU I (2) 1, 7), one of the ten **niyamas** (observances) according to these *Upaniṣads*. It consists in listening to the sacred books and dwelling on the meaning and significance of the *Vedānta* texts.

siddhāntaśravaṇa-2 सिद्धान्तश्रवण-२ (DU II 1, 9), clearly understanding that one's innermost self is the Ultimate Truth, the Supreme knowledge and Perfect Bliss; i.e. brahman. DU includes it among the niyamas like the other Upanisads. siddhāntaśravana-3 सिद्धान्तश्रवण-३ (VS I 60-61), study of the doctrines, one of the ten niyamas. Listening to and pondering over vedāntic or Upaniṣadic doctrines. Vasistha further explains that it also involves study of one's own branch of Veda, study of different sections of history and mythologies and thereby studying others' doctrines etc. This can be equated with the concept of svādhyaya of Patañjali.

siddhāsana-1 सिद्धासन-१ (GS II 3, 7, III 33, 54; YTU 29; HP I 34, 35, 37, 38), one of the important āsanas. It consists in placing one heel near the anus, pressing it hard, placing other heel above the organs of generation, fixing the chin over the chest, assuming an erect sitting posture-not entertaining any desire or wish for the time being-not moving the eyes and fixing the gaze between the eyebrows. Success in this āsana opens the door to mokṣa.

HP eulogises $siddh\bar{a}sana$ and mentions

vajrāsana, muktāsana and guptāsana as its various synonyms only.

siddhāsana-2 सिद्धासन-२ (TBU I 26), any posture by practising which the siddhas¹ acquire siddhi³ (success).

siddhāsana-3 सिद्धासन-३ (G 8), one of the two distinguished āsanas mentioned by Gorakṣa, the other being kamalāsana. The technique of siddhāsana consists in pressing firmly the perineal space with one heel and placing the other heel above the pubes, keeping the body erect, remaining motionless with the organs under control and fixing the gaze at the spot between the eyebrows.

siddhi-1 सिद्धि-१ (SK 4, 14), proving something (= establishing some proposition, or existence, or reality). The siddhi of a prameya, (the proposition to be proved) is done, i.e., it is proved, by citing a pramāṇa. That pradhāna and vyakta are aviveki etc., because they are traiguṇya त्रेगुण्य (of the nature of the three guṇas) is an example of siddhi.

siddhi-2 सिद्धि-२ (SK 46, 47, 49, 51), experiences which mark success or attainment. It is one of the four constituents of the pratyayasarga according to SK.

siddhi-3 सिद्धि-३ (YS III 37, II 43; ATU 11), extraordinary powers. Aṇimā (becoming extremely small-even microscopically small)-the first among eight siddhis, all of which, according to Patañjali, are acquired by bhūtajaya as the result of success in saṃyama on the material aspect of nature.

siddhi-4 सिद्धि-४ (ATU 19; YS II 45; HP I 11, 64-6, II 18, 43, III 82, 97, 116-7, 121, 124, IV 8), success. The person who rises to the top of tārakayoga, i.e., covers the whole way, meets with success in all his endeavours (ATU). According to Patañjali, the yogī is successful in attaining samādhi if he surrenders himself to God.

siddhipāda सिद्धिपाद (HP I 6), name of a haṭhayogī enumerated by Svātmārāma as a mark of salutation to the yogī.

sitkā सीत्का (HP II 54), sound like sit सीत् while practising sitkāri prāṇāyāma. The sound sit is produced while breathing in through mouth. The very name of sitkāri prāṇāyāma is derived from the production of this sound.

sīvanī सीवनी (HP I 53; VS I 69, 73, 79, 82, III 42), perineum. The part of the body in between the scrotum and the anus. According to some yogic texts, this is considered to be the seat of kuṇḍalinī śakti. Yonisthāna is the synonym of sīvanī.

sīvinī सीविनी (YSU V 27), synonym of citrānāḍī, situated at the frenum of the penis. Its main function is to discharge the semen.

sukṛtakārya सुकृतकार्य (GS I 6), good deed. What bodies we get and in which environment we are born after death etc. depend upon our good and bad deeds. This is *Gheraṇḍa's* view, as of many others. *Patañjali's* nimitta (motive) (YS IV 3) is also explained as

good and bad deeds performed in the past. It would, however, be more consistent with *Patañjali's* thought if **nimitta** (motive) is interpreted as conative dispositions formed during the course of lives. These do not bring about death. They only determine the kind and environment of the next life. Death is brought about by natural causes.

sukha-1 項四-१ (YS I 33, II 46; TBU I 14, 25; HP II 69-70, IV 2, 111), pleasure. It is ordinary pleasure which every one experiences. But it is quite foreign to the person who has realised brahman and is brahman himself. If somebody is happy in this sense, Patañjali advises that we should not be jealous of him but should share his happiness as a friend. This attitude he calls maitrī (friendship). The essence of āsana, according to Patañjali, is remaining in the state of sukha for a long time; i.e., not feeling any uneasiness while maintaining a pose for a length of time.

sukha-2 सुख-२ (HP IV 78), sahaja ānanda, supreme bliss. According to this text, whether there is anything like salvation or not, there is uninterrupted consummate bliss in rājayoga.

sukhalābha सুজনাম (YS II 42), acquisition of pleasure. This pleasure is derived by the cessation of desire. *Vyāsa* quotes anonymous verse which states that no pleasure is equal to the pleasure derived by the cessation of desire (santosa).

sukhāsana सुखासन (DU III 2, 13; GS V 48), one of the āsanas (postures). In whatever pose one attains comfort and composure of mind, that pose is sukhāsana. It is recommended for those who are weak. It is not included by Gheraṇḍa among the principal āsanas, though it is recommended by him for performing sagarbha prāṇāyāma².

sudhācandramaṇḍala सुधाचन्द्रमण्डल (MBU II (1) 5). A marginal light, or one of the bright visions preceding the appearance of a śāmbhavī lakṣya. Whether this light is seen by yogī before, or around, or on top of, or blended with the lakṣya is not clear. A yogī who is successful in śāmbhavīmudrā, sees the lakṣya necessarily.

sumahatīmudrā सुमहतीमुद्रा (YCU 66), mahāmudrā.

surānanda सुरानन्द (HP I 8), name of one of the haṭhayogīs enumerated by Svātmārāma as a mark of the salutation to those yogīs.

suvarloka सुवलीक (NBU 3), one of the six higher regions of creation above the earth. According to NBU, it should be imagined as the waist of the hamsa who represents the *virāṭ* विराट् (universal) rūpa (of the One Reality).

suṣira सुचिर (ANU 26), one of the seven dvāras (doors) according to this text.

They are called doors because they show the way. Suṣira is a tiny little hollow somewhere inside the head. If

a $yog\bar{i}$ finds that, concentration on that spot leads him to the goal of self-realization, he should regularly take $pr\bar{a}na^{1-2}$ to that spot and concentrate there.

suṣupta स्पुप्त (TSM 10, 150), one of the four avasthās-states-in which we live, the other three being jāgrat (waking), svapna (dreaming) and turīya. The content of the suṣpta vṛtti is supposed by this ṛṣi to reside in the centre of the upper palate. It is a dreamless sleep-like state, but a state of consciousness. According to TSM, it has nothing to do with jāgrat, while every svapna is the svapna of jāgrat. Suṣupta and turīya are in no way reproductions of the experiences of the waking state.

suṣupti-1 सुषुप्ति-१ (YCU 72; ABU 11), one of the four avasthās (mental states) of men, the other three being jāgrat (waking), svapna (dreaming) and turīya. The experiencer of this dreamless sleep state is called prājña. But essentially there is a unity behind all these states and one and the same ātmā¹ (=bhūtātmā) resides in all of them (ABU).

suṣupti-2 सुषुप्ति-२ (TSM 165), inattention to objects. It is not like the inattention of absent-mindedness or dream in which we do not perceive objects, but a state in which one is inattentive to objects because one's mind is preoccupied with the ultimate Reality.

suṣumnā-1 सुषुम्ना-१ (GS III 46; SAU I

(4) 9-11, (7) 1, 9; DU IV 5, 7, 10, 13; DBU 52, 56; VU V 23, 30, 67; YSU I 115, 118-9; HP II 6, 75, III 4, 54, 113-4, IV 12, 16, 18, 20, 46, 64, 68), the central nāḍī. It is significantly described as ratnapūrita रत्नपूरित (passing through beads), which shows that it runs inside the vertebrate. Kuṇḍalinī sleeps below the lower end of the suṣumnānāḍi².

Suṣumnā is said to be situated between iḍā and piṅgalā, because these two nāḍīs² run on either side of suṣumnā. Vāyu is to be sent up along the suṣumnā and prevented from running up along iḍā, piṅgalā or kuhū.

Susumnā is the most important nādi in the human body. It is supported by the spinal column and is said to run from behind the anus to the head up to the point known as brahmarandhra. This $n\bar{a}d\bar{i}^2$ is firmly attached to the vertebral column. Its presiding deity is called siva. According to GS, prāṇa is to be withdrawn from its sphere of activity in the nose and blended with apāna in the lower part of the spinal cord and this combined vayu is to be raised up along the susumnā to the brain. Whether this process itself is kundalini or it rouses some other potentiality which is kundalini, is not quite clear. If a yogi succeeds in raising the blend of prana¹⁻² and apana¹ to the head, he is said to see it there in the form of a light, though according to

Gheranda, kuṇḍalini above the level of the eyes, is not perceptible. In TSM it is compared in fineness to the thin fibre of a lotus stalk.

'Prāṇa stopping its activity in the nose' probably means suspension of respiration. Rising of prāṇa¹-² and apāna¹, along with jīva and agni, is a forceful unique phenomenon which is called awakening of the kundalinī śakti.

According to HP, when **suṣumnā** is thoroughly purified, distinct sound is unmistakably heard as an internally aroused sensation (cf. **suṣumnā-2**).

susumnā-2 सुबुम्ना-२ (HP IV 17), suspension of the functions of the right and left nostrils, i.e., respiration and prana² rising to the head. When this happens life activity is reduced to the minimum and the process of decay slows down. This delays death. This phenomenon is expressed here by saying that 'suṣumnā eats up death'. Since suspension of respiration facilitates rising of prāna in the susumnā the function of kumbhaka is attributed to susumnā. Similarly in HP IV 18, suṣumnā is called the **śakti** of Lord **śiva**, while this śakti is in fact kundali, obviously because kundali rises along the sușumnā.

suṣumnā-3 सुषुम्ना-३ (BY IX 96), piṅgalā. Yājñavalkya's word for suṣumnā¹ is amā which other writers have used for a dṛṣti-closed eyes.

suṣumna-4 सुषुम्ना-४ (VS II 19, 25-6, 30),

the central nadi located at the middle of the kanda. Its range is upto the brahmarandhra in the head through the backbone and it is considered to be the path of liberation. It is invisible and subtle and is also known as vaisnavi. It is the source of rejoicing the time factor. During the practices of kumbhaka, the internal prāṇa enters and resides in susumnā. That particular length of time, which the prana stays there, is swallowed up by the susumnā and so the practicant remains unafflicted by that particular time. That is why susumnā is called "rejoicing the timefactor".

susthāna सुस्थान (HP IV 16), good place. The place appropriate for the practice of yoga.

suhṛd सृहद् (SK 51), friend (a true friend). Here friend means guru². Suhṛtprāpti सृहतप्राप्ति (obtaining a true friend) is, therefore, considered to be a piece of good luck obtainable by good fortune and is considered to be one of the siddhis (marks of success).

sūkṣma-1 सूक्ष्म-१ (SK 37), subtle. The very subtle and difficult distinction between **pradhāna** and **puruṣa** is made by **buddhi** (intellect) and **buddhi** alone and by no **indriya** (sense). The realities are not open to perception.

sūkṣma-2 सूक्ष्म-२ (GS I 49), thin. A thin thread is used for **neti**.

sūkṣma-3 सूक्ष्म-३ (GS I 52), small. A tiny little object is gazed at in trāṭaka.

sūkṣma-4 सूक्ष्म-४ (SK 39, 40; YCU 72), one of the three kinds of viśeṣas, the other two being mātāpitṛja and prabhūta. In sūkṣma viśeṣas, sattva predominates. In mātāpitṛjas, rajas and in prabhūtas, tamas predominates. The sūkṣma viśeṣas are immaterial and transmigrate from one body to another carrying their bhāvas² (dispositions) with them. They are aindriya (made of indriyas) in Patañjali's language. Liṅga is another name given to this kind of viśeṣa. YCU calls it the sūksma body of man.

sūkṣma-5 सूक्ष्म-५ (GS VI 18, 20-1; ANU 4, 21), one of the three kinds of dhyāna (meditation), the other two being sthūladhyāna and tejodhyāna. The object (content) of this dhyāna is kuṇḍalinī after it has crossed the region of the eyes. Then it becomes imperceptible. Still it can be an object of dhyāna according to Gheraṇḍa.

According to ANU, it is the **dhyāna** of the **akṣara brahma** which may be accompanied with the **asvara makāra** (*ma* म) which is not a sound at all.

sūkṣma-6 सूक्ष्म-६ (YS II 50), feeble, gentle, not forceful. As a yogī progresses in the first three types of prāṇā-yāma, according to Patañjali, the exhalation or inhalation preceding kumbhaka becomes more and more sūkṣma in respect to deśa. Patañjali uses the word deśa because when respiration gets sūkṣma, the exhaled air is

felt only when a hand is taken quite near the nostrils. Respiration is so gentle that the exhaled air is not felt by the hand at a distance from the nose.

sūkṣma-7 सूक्ष्म-७ (YS II 10), not open to introspection. The kleśas are innate mental dispositions which inhere in citta¹ and transmigrate with it. The consciousness motivated by them can be introspected, not the propensities which motivate them. The yogīs can lay them completely to sleep. But they can be removed root and branch only when the citta in which they inhere undergoes pratiprasava and ceases to exist as a citta¹.

sūkṣmalaksya सूक्ष्मलक्ष्य (HP II 32), minute object. While doing trāṭaka, one is advised to gaze constantly at a minute object.

sūkṣmaviṣaya सूक्ष्मविषय (YS I 44, 45), subtle object (content) of samāpatti.

Tanmātrās, liṅgamātra and aliṅga are said to be the sūkṣmaviṣayas by VB. Vyāsa has thus excluded the indriyas and the mahābhūtas from the list of sūkṣmaviṣayas. The mahābhūtas and indriyas would in this way be sthūla viṣayas. But it appears that in this context Patañjali considers sūkṣmaviṣayas to be those objects (contents of samāpatti) which cannot be imagined. Images like those of the gods are capable of being introspected. Hence objects of samāpatti.

Bhautika भौतिक (made of bhūta) objects

can also be imagined. They too are therefore clearly **sthūla** objects though not necessarily the **bhūtas** of which they are made up. But the **indriyas** and the **cittas**, which are made up of them, can neither be perceived nor imagined. Hence they cannot form **sthūla** objects of **samāpatti**. *Vyāsa* is therefore, not justified in excluding them from the list of **sūksma** objects of **samāpatti**.

sūkṣmaśakti सूक्ष्मशक्ति (SSPI7), the cause of kuṇḍalinīśakti. It consists of five characteristics. They are beginninglessness, continuity, steadiness, firmness and indescribability.

sūkṣmaśarira सूक्ष्मशरीर (YCU 72). One of the three bodies of living beings, the other two being sthūla and kāraṇa liṅga which are not material. By virtue of their being made up of the karaṇas they should be kāraṇas, but the kāraṇaśariras are considered to be a third kind of śariras. Reference may be to the guṇas of which everything is made.

sūkṣmasāttvika सूक्ष्मसात्विक (SSP VI 60), of sāttvika.

sūkṣmā सूक्ष्मा (VS II 26), synonym of kuṇḍalini.

sūrya-1 सूर्य-१ (YKU I 21), sūryabhedana.

sūrya-2 सूर्य-२ (GS V 40-1, 58; HP II 7-8, 63, III 27, 108), piṅgalā.

sūrya-3 सूर्य-३ (GS III 29, 30; HP II 10, IV 17), a source of heat which is supposed to reside (probably in the nervous system) in a spot on the level of the

navel (maṇipūra cakra). It is supposed to devour the amṛta (nectar) which oozes from the candra in the throat (viśuddha cakra). Viparītakaraṇī mudrā is prescribed for preventing this.

sūrya-4 सूर्य-४ (HP III 76-7), heat that resides in the navel region. The same is also known as jaṭharāgni (digestive fire). Sūrya is also supposed to absorb the nectar oozing from the candra.

sūrya-5 सूर्य-५ (VS II 29), sun. Breath flowing through piṅgalā nāḍī has a heating effect on the body according to yogic texts. Hence, sun is supposed to move through piṅgalā nāḍī (cf. piṅgalā) and it is said to be rajas.

sūryagrahaṇa सूर्यग्रहण (DU IV 47), passing of prāṇa from piṅgalā into the kuṇḍalīsthāna, obviously suṣumnā. sūryadvāra सूर्यद्वार (VB III 26), door of suṣumnā nāḍī, saṃyama upon which leads to the knowledge of entire bhuvana.

sūryabhedana सूर्यभेदन (YSU I 88, 92; HP II 44, 48-50; YKU I 26; GS V 46, 63, 68), one of the eight kumbhakas. It consists in inhaling gently through the right nostril as much air as possible. Suspending respiration by means of jālandharabandha (chin-lock) with great effort until perspiration appears at the root of nails and hairs (HP and GS), raising (cf. GS) all the vāyus from the sūrya³ (at the navel), and after that, exhaling gently and steadily through the

left nostril. This whole process is to be repeated several times. This practice wards off old age and death, arouses the kundalinisakti and promotes jatharāgni (digestion). It is said to be good for kapālaśodhana (YKU). These texts give the pranayamas the name kumbhakas because retention of breath is considered by them to be the most important phase of prāṇāyāma². Sūryabhedana prāṇāyāma² is a fully fledged prānāyāma2 complete with inhalation, retention and exhalation. Patañjali (YS II 49) defines prāṇāyāma² as kumbhaka¹.

sūryamaṇḍala सूर्यमण्डल (MBU II (1) 5), solar region. Second attainment in the sequence of attainments through śāmbhavī mudrā.

sūryarūpāgni सूर्यरूपिन (YSUV 32), one of the five agnis which are said to constitute the sūkṣmarūpa (form) of brahman (cf. vairāja). This agni is supposed to reside in the nābhimaṇḍala and to dry up the nectar which drops from the candra in the tālumūla. While the candra³ in the tālumūla faces downwards, the sūrya² in the nābhi faces upwards. Poison is here said to ooze from the sūrya².

sūryākāśa सूर्याकाश (MBU I (2) 13; ATU 7), one of the five forms of the madhya lakṣya of tāraka yoga. It is said to have the brightness and majesty of crores of suns put together.

sopakrama सोपक्रम (YS III 22), having a

quick vipāka. Patañjali's theory is that every mental process and every action leaves a saṃskara (disposition) behind and that some saṃskāras have a long life and they prompt behaviour even after a lapse of time; while others show their result soon. The latter are said to be sopakrama. Action or mental activity for which a saṃskāra is responsible is the vipāka of that saṃskāra.

sopāśraya सोपाश्रय (VB, VM II 46), one of the thirteen āsanas enumerated by Vyāsa. According to Vācaspati, this āsana is performed with a support of yogapaṭṭaka.

Wood translates it as yogic table. \overline{A} ranyaka mentions that a cloth was used to the back and the legs while siting for performing this \overline{a} sana. This cloth was called yogapattaka.

soma-1 सोम-१ (HP III 27), idā. The practice of mahābandha brings about the union of the currents of ida, pingalā and suṣumnā.

soma-2 सोम-२ (HP III 43), somakalājala. If one practises **khecarī**, he gets ample of this liquid to drink.

somakalā सोमकला = somakalājala सोम-कलाजल (HP III 44-5; G 63, 66), secretion from the viśuddha cakra in the throat. If this is not allowed to flow down to the agni in the nābhi (navel) the yogī, they say, becomes immortal within a month. Their explanation is that the dehī (jīva) does not leave the body so long as the latter is saturated with the somakalājala saved from being burnt up by the fire in the nābhi. somagrahaṇa सोमग्रहण (DU IV 46), passing of prāṇa³ from iḍā into the kuṇḍalīsthāna-the suṣumnā nāḍī.

somamaṇḍala सोममण्डल (G 56), literally the region of the moon. It is the viśuddha cakra (a centre for meditation) in the throat from which the nectar is said to flow and which is further consumed by the sun in the navel.

so'haṃbhāva सोऽहंभाव (SSP I 27), consciousness of "I am that". The last creation in the sequence which is manifested through **prakāśa**. It is supposed to contain five characteristics. I-ness, ability to fulfill any desire, self-ness, ability to experience universality and omniscience are its characteristics.

saukṣmya सौक्ष्य (SK 7, 8), subtlety, being extremely small. Perhaps, in the absence of the modern powerful microscopes, many microscopically small things were considered to be sūksma when the Kārikās were written. But sūksma also includes substances which are ultramicroscopic and not capable of being perceived even with the help of the most highly developed scientific devices. The unmanifested nature is sūkṣma (subtle) in this sense. Patañjali's kleśas (mental dispositions) are sūksma in a still another sense-in the sense that they are not capable of being introspected as mental processes are.

saumanasya सौमनस्य (YS II 41), peace of mind. As a result of observing the niyama (observance) which *Patañjali* calls śauca (purity of mind and body) the *yogī* experiences peace of mind.

stambhakarī स्तम्भकरी (G 69; GS III 59), causing stability of mind. Bhuvodhāraṇā is described as stambhakarī. It appears that here stambha does not refer to the heaviness of the earth, though some commentators connect these two.

stambhani स्तम्भानी (G74), bhuvodhāraṇā.

stambhavṛtti स्तम्भवृत्ति (YS III 50), one of the three kinds of prāṇāyāma other than kevala kumbhaka. This type of prāṇāyāma is cessation of respiration after as much of inhalation or exhalation as is necessary to bring about that position of the chest which, according to Patañjali, is a stambhavṛtti, i.e. a position in which the lungs are neither completely empty nor full to capacity with air-the midchest position. The other two types of prāṇāyāma naturally are bāhya and ābhyantara.

styāna स्त्यान (YSI30), temporary inability of citta to exert itself so as to move in the direction of yoga. This is here called one of the nine obstacles (antarāyas) in the path of yoga.

sthāṇu-1 स्थाणु-१ (G 8, 39), unmoved like a pillar. In the state of siddhāsana, no part of the body moves in any way, Sthāṇutva (fixity) of verse 39 is still more rigorous. According to this text, in the state of **samādhi** even the autonomic functions of the *yogī's* body cease and in appearance he becomes literally a pillar with no marks of life in him.

sthāṇu-2 स्थाण्-२ (HP II 2), steady, motionless (like a pillar). As a result of the practice of kumbhaka, the yogī attains the stability. Since body is controlled by mind and mind is controlled by breathing, therefore, with the restriction of breathing mind becomes steady resulting into stability of the body and making it like a pillar.

sthāna-1 स्थान-१ (GS V 2), suitable place. GS enumerates various prerequisites for the practice of **prāṇāyāma** in which suitable place is the first requisite.

sthāna-2 स्थान-२ (HP II 12), a particular stage attained as a result of the practice of prāṇāyāma (uttama). The coveted blissful position in which the prāṇa enters the brahmarandhra. This can be attained only when a sādhaka has perfected the uttama stage of prāṇāyāma.

sthānatraya ন্থান্যথ (ABU 11), jāgrat (waking state), svapna (dreaming) and suṣupti (dreamless sleep). The state of mukti (emancipation) is beyond these. Sthānatrayātīta is the description of a liberated soul also. If one leaves one's body in the sthānatrayātīta state (i.e. the samādhi state) one is not born again. This is one view. Another view

is that by the practice of any kind of yoga, including bhaktiyoga and jñānayoga, one becomes jīvanmukta (liberated while alive) and when that $yog\bar{i}$ dies he is not born again. According to this view, it is not necessary for not being born again to go into the state of samādhi at the time of death. This latter is the Sānkhya, the Pātañjala as well as the **Vedānta** view. sthitaprajña स्थितप्रज्ञ (BG II 55), a man of steady wisdom. When one completely renounces all the desires that have entered the mind and remains satisfied in the self alone is called a man of steady wisdom.

sthiti-1 स्थित-१ (SK 69; YS I 13, 35), keeping or remaining. It is one of the three phases through which everything has to pass. It is of the subjects explained in the puruṣārthajñāna (knowledge of the ways of nature for liberating puruṣas) revealed by Kapila, the other two phases being utpatti (coming into existence) and pralaya (destruction). Abhyāsa, according to Patañjali, is effort directed towards keeping the citta² empty of all cognitive processes.

If a viṣayavatīpravṛtti (internally aroused sensation) arises it helps keeping the attention directed towards the same object and thus prevents fluctuation of attention, i.e., helps concentration (dhāranā).

sthiti-2 स्थिति-२ (HP IV 8), sahaja, the condition brought about by rājayoga.

sthiratā स्थिरता = sthairya स्थेर्च (YS III 31; GS I 9, 10; HP I 17), steadinessone of the seven achievements of ghaṭastha yoga taught in GS. Sthairya is obtained by the practice of the various mudrās. Most probably it is nervous stability, in general, stability of whatever is achieved by practice.

sthirapada स्थिरपद (HP IV 82), sthiti. sthirasukha स्थिरसुख (VB, VM, VBh II 46), quality of āsana which can be practised steadily and comfortably. VBh considers yathāsukha as the explanation of sthirasukha, which means "any comfortable sitting posture".

sthirā स्थिरा (KU 15), suṣumnā.

sthirātmaka स्थिरात्मक (VS V 32), that which has a stationary characteristic. The four signs of zodiac, viz., taurus, leo, scorpio and acquarius reside in the right side of the human body and they are of stationary characteristics.

sthūla-1 स्थूल-१ (GS VI 1, 8, 14-5, 21), one of the three kinds of dhyāna (meditation), the other two being jyotirdhyāna (tejodhyāna) and sūkṣma dhyāna. It consists in contemplating either the mūrti (image) of one's guru² (teacher of yoga) or of god. The object of sthūladhyāna can be vividly visualised. It is quite a complex affair. It is an image with all its beautiful and attractive environment. It is not a single simple object of cognition- a sensum or an elementary image, is the type of dhyāna for the beginner. Jyotir-

dhyāna is a hundred times more important than sthūladhyāna, and sūkṣmadhyāna is lacs of times more important than jyotirdhyāna.

sthūla-2 स्थूल-२ (YCU 72), one of the three śarīras (bodies). The other two being sūksma and kāraņa. Sthūlaśarīra corresponds to bhautika (material) guņapariņāmaviśeṣa (material bodies) (cf. *Īśvarakrsna*). Parts of the body known as sense organs also are included in it. According to this Upanisad, the sthūla² (bodily) indriyas are a part of this sarīra (body). The purusa called viśva, who is said to be the experiencer of the waking state, is the enjoyer of the sthula sarira. In other words, the subject who perceives and enjoys concrete objects is said to be viśva.

sthūla-3 स्थल-३ (YS III 44), material objects. While talking of gunaparvas, Patañjali mentions four of them: viśeșa, aviśesa, lingamātra and alinga. But in the context of conquest of nature he has enumerated five aspects of material reality-the gross and subtle forms in which matter exists-viz., sthūla, svarūpa, sūksma, anvaya and arthavatva. If we equate sūksma with aviśesagunaparva-asmita and tanmātrā as VB takes it to be-then svarūpa would be the five mahābhūtas and sthula the material objects made up of them. In this way the mahābhūtas will also be a matter on which the **sthūla** objects are the various forms. In fact, for the purposes of a layman, the latter alone are the material things that exist (cf. **svarūpa**).

sthūladhyāna ম্থুলম্মান (GS VI 2-14), contemplation of the image of a concrete object. It may be the image of ones tutlary god with all its beautiful surroundings, of one's guru² in all his grandeur, or of om² as it is seen, written or printed.

snāna स्नान (BY VII 1), bath, described as of seven kinds, viz., (1) with recitation of prescribed mantras; (2) using mud etc.; (3) with smearing of the sacred ashes; (4) with the dust rising when the herd of cows passes; (5) done in the rains with sunshine; (6) immersing in water; and (7) by merely reflecting upon Lord viṣṇu (cf. saptasnāna). sparśa स्पर्श (TSB 5; VB II 19), one of the five tanmātrās. Vyāsa considers it to be one of these five aviśeṣas, the sixth

According to TSB, it is one of the five amśas of ap. It exists as a jaiva tanmātra in the skin of all living beings and is stimulated by the corresponding tanmātrā in the objects which come in contact with the skin. As a stimulus, it is a viṣaya⁴; and according to this Upaniṣad, one of the five kāryas of agni.

aviśesa being asmitā.

sparśasaṃvit स्पर्शसंवित् (VB, VM, VBh I 35), consciousness of touch which is acquired through the concentration at

the middle of the tongue. This further leads to the control of mind (manasā-sthitinibandhana). VB enumerates other four consciousnesses also, viz., rasasaṃvit, rūpasaṃvit, gandha-saṃvit and śabdasaṃvit.

smaya स्मय (YS III 51), pride, self-consciousness. On gaining omnipote-nce and omniscience the *yogī* will have all kinds of temptations. But he has to remain perfectly detached and controlled and at the same time without the least feeling of pride or self-consciousness. He may fall even if he becomes self-conscious; i.e., his mind will be proud of his achievements.

smṛti-1 स्मृति-१ (YS I 6, 11, 43), calling up an image. Although *Patañjali* defines smṛti as if it were a saṃskāra, he obviously means by it the mental process we call remembering, because he is defining a citta-vṛtti-smṛti as a mental function-as opposed to a part of the mental structure.

smṛti-2 स्मृति-२ (YS I 20), dhyāna.

smṛti-3 स्मृति-३ (YS IV 9), the arousal of a vāsanā, which would be a vṛtti, the relevant vāsanā being the saṃskāra responsible for it. The vṛtti caused by the awakening of a saṃskāra necessarily corresponds to that saṃskāra. The word vipāka in this sūtra is thus used for vipākāśaya. Experiences of all kinds generate vāsanās-the karmavipākāśayas abiding in the form of saṃskāras and arousal of these

saṃskāras is vāsanābhivyakti in this context.

smṛti-4 स्मृति-४ (HP IV 110), remembering in general. In the state of samādhi there is neither remembering nor forgetting. This is Svātmārāma's idea. Perhaps, what he means is that in the state of samādhi nothing is obliterated from memory altogether nor do we call up any idea or an image.

smṛti-5 स्मृति-५ (BG XVIII 73), memory, regarding the reality of the self, on the acquisition of which follows the loosening of all the bonds.

smṛtisankara स्मृतिसंकर (YS IV 21), confusion or memories. Patañjali here points out a fallacy in accepting the kṣanikavādin's contention that purusa need not be accepted as selfilluminating seer principle over and above the citta. If one citta is said to be illuminated by another citta, which further in turn illuminates other cittas. it not only leads to the infinite regress but also that lead to confusion of memories. As many are the cognition of citta, so many are memories. Further, on account of this confusion, there will also be the absence of ascertainment of one memory and thus smṛtisankara (cf. atiprasanga).

sva स्व (YS II 23), the individual self. While the ātmā according to the haṭha yogins like Gheraṇḍa is One allpervading brahman and neither one of the many puruṣas of the Sāṅkhya

philosophers like Patañjali, nor anything gunātmaka, the sva of Gheranda appears to be the same as the sva of Patañjali. The svāmī (Patañjali's purusa) appropriates a sva (sometimes called by him sattva) which is an (Īśvarakṛṣṇa's aindriya-viśesa sūksma-viśesa or linga), but while the Sānkhya philosophers aim at discriminating between the two, the hatha vogins stress the union of the two. Viveka is such discrimination according to the former and realization of the identity of the two according to the latter. Gheranda emphasises this union in connection with his rajayoga of the dhyāna type. When in the state of śāmbhavīmudrā the yogī sees a light, that is the light of $\bar{a}tm\bar{a}^2$ (brahman) and the $yog\bar{i}$ is advised to identify himself with that, he then sees himself and brahman as one and the same reality. svadharma स्वधर्म (SSP V 20), recognised as virtuous pathway. Goraksanātha declares that among several virtuous pathways yoga way is the best one.

svapna स्वप्न (YCU 72; MBU II (4) 1), one of the four avasthās (states) in which men live. It is the dreaming state and taijas is said to be the experiencer (introspector) of this state.

svapnajñāna स্বদেরান (VBh I 38), knowledge which is of dream. The mind which has dream as its support, i.e., object, sees the dream even in the waking state. Because of the perishable nature of objects, the knowledge of such objects even during waking state is considered to be dream. This, in turn, leads to detachment which becomes the cause for stabilizing the mind.

svara स्वर (ABU 7), sound-here "om²", symbolizes which brahman. brahman in fact is asvara. So long as we know Him as represented by a sound, or any other sensum, or a percept, we do not know the true brahman. By reciting om² we get a knowledge of brahman as represented by a word. We know brahman, as He is, only when, as the result of a long practise of yoga4, we rise above the representation and realise the One which can in no way be represented or explained. It is a matter of direct experience and not of description.

svarasavāhī स्वरसवाही (VBh II 9), that which flows by its own potency or by subliminal impression. This subliminal impression is born from the experience of fear of death in an earlier life. This subliminal impression is found even in a worm just born.

svarūpa-1 स्वरूप-१ (YSI3, II 54), the form in which citta exists when there are no citta vṛttis. In the absence of citta vṛttis the relation (saṃyoga) of puruṣa¹ sees (introspects) the vṛttiless citta.

As there is vṛttisārūpya of puruṣa¹ in vyutthāna, i.e., when there are citta² vṛttis, so there is his citta

is samvoga of purusa1 with the

svarūpa of citta¹.

svarūpe'vasthānam when there are no inserting the two feet in the folds between the opposite calves and thighs (breaking of saṃyoga), but a particular state of saṃyoga. It is not return of the puruṣa¹ to the saṃyoga-less state. It svastha-1 स्वस्थ-१ (SK 65), Although the

svarūpa-2 स्वरूप-२ (YS III 44, 47), the substance which takes different forms. The material objects are the various forms which the mahābhūtas (elements) take and the cittas the forms which the indriyas take (cf. VB). Hence the five elements are here called the svarūpa of material objects and the indriyas, the svarūpa of the cittas.

Pratyāhāra is the absence of activity of any indriya³ as if the indriya was imitating such a vrtti-less citta¹.

svastika स्वस्तिक (VS I 67, 68, 69; VM II 46), one of the ten **āsanas** enumerated by *Vasiṣṭha*. *Vasiṣṭha* has described two techniques of this **āsana**:

- (1) sitting properly on the level ground with body erect and setting the two soles between the opposite thighs and knees;
- (2) a posture wherein a person sits well keeping the ankles by the side of perineum is also called **svastika** (verse 69).

VM describes its technique similar to the first one referred to above.

svastikāsana स्वस्तिकासन (GS II 3, 13; TSM 34-5; VU V 16; SAU I (3) 1), one of the principal **āsanas**². It consists in svastha-1 स्वस्थ-१ (SK 65), Although the connection of linga with a body on the one hand and with a puruṣa¹ on the other may persist for some time after attaining kaivalyajñāna (Kārikā 64), the attitude of the puruṣa² during that time of apavarga (indifference), not that of bhoga (enjoyment). Then he is said to be sustha सुस्थ (in blissful state), svastha, svaccha स्वच्छ (unconcerned).

svādhisthāna-2

svastha-2 खस्य-२ (HP IV 112), not perceiving the objects presented to sense. If in the waking state one remains svastha² as one does in sleep, one is surely a liberated soul.

svāngajugupsā स्वांगजुगुप्सा (YS II 40), disgust for one's own body. As a result of the practice of niyama called śauca, one is able to perceive the filthiness of the body and this develops a feeling of disgust towards it. According to VBh, this perfection is under external cleanliness (bāhyaśauca).

svādhiṣṭhāna-1 स्वाधिष्ठान-१ (G 79; DBU 43-4; YCU 4, 6, 11), one of the cakras (centres for meditation in the body)-the second from the lower end, the first cakra being ādhāra. Svādhiṣṭhāna is described by G as beautiful like a genuine ruby.

svādhiṣṭhāna-2 स्वाधिष्ठान-२ (SSP II 2), the second in the sequence of nine **cakras** recognised as one of the spots important for the purpose of **dhyāna**.

svādhyāya-1 स्वाध्याय-१ (YS II 1, 32), one of the five niyamas (observances) included by *Patañjali*. It is a part of *Patañjali's* kriyāyoga. According to VB, it includes (1) study of the sacred texts and (2) recitation of mantras².

svādhyāya-2 स्वाध्याय-२ (BY VII 59), recita-tion of Vedic mantras. These are expected to be accompanied by their rṣi ऋषि, chandas छन्द:, devatā देवता, brāhmaṇa and viniyoga in addition to their meaning related to their knowledge and action.

svābhāsa स्वाभास (YS IV 19), known by itself. Citta² not being the draṣṭā (introspector) does not perceive itself. It is only a cogniser of objects, itself introspected by its puruṣa¹. As a cogniser it only perceives the objects, not itself.

svārtha-1 स्वार्थ-१ (SK 56), for its own sake. The creation, material as well as immaterial, appears to exist for its own sake. But in fact it exists for the sake of puruṣas¹, to afford this or that puruṣa¹, the opportunity of attaining vimokṣa (emancipation). Thus Īśvara-kṛṣṇa's Sāṅkhya is a teleological philosophy.

svārtha-2 स्वार्थ-२ (YS III 35), one's correct position or status, one as one is. Ordinarily the citta takes itself to be the permanent supreme self without thinking of another reality with which

it is conjoined and which is the really permanent and thus the superior self. We can say **citta**¹ usurps the status of **puruṣa**¹.

This is its parārtha position. It enjoys everything in this position. But by means of saṃyama on svārtha² for realising what its exact position is, it gets the knowledge that it necessarily belongs to puruṣa¹. Then it sees that there is a puruṣa¹ behind it, without whom it is nothing and develops an attitude of indifference. This is the apavarga, which can become an abiding sentiment in him.

sveda-1 स्वेद-१ (HP II 12), sweat. In the primary stage of the kumbhaka, a particular kind of heat is generated in the body which causes sweating. This sweat is indicative of the achievement of the primary stage of kumbhaka.

sveda-2 स्वेद-२ (TBUI41), sweat here has been considered as one of the obstructing factors for the practise of samādhi. One is advised to avoid such obstructions cautiously.

ha-ह

haṃsa-1 हंस-१ (HU 4, 7, 8, 10; YSU VI 20), paramahaṃsa = paramātmā.

haṃsa-2 हंस-२ (GS III 34, V 80; HU 10; YSU I 171; G 40), respiration which comprises of two processes: (1) passing of air in and out and (2) expansion and contraction of the chest.

The $yog\bar{i}s$ associate a third process also with respiration, viz. the activity of the

prāṇa vāyu in the upper parts of the region spreading from the nose to the bottom of the spinal cord (mūlā-dhāra). The apāna vāyu works in the lower parts of this region. Vāyus in this sense are life which is supposed to be a representation of brahman in the living being.

Hence *Gheraṇḍa* finds **haṃsa** in the two nostrils, in the chest as well as in the **mūlādhāra**.

The respiratory rate they have correctly measured to be fifteen in a minute and they have found that ordinarily the expired air can be felt at a distance of nine inches below the nostrils.

According to YSU, if yoga is learnt from a competent guru² respiration stops and self-realization (so'ham, meaning "I am that") takes its place by virtue of a process which goes on in the suṣumnā nāḍī, i.e., haṃsa is converted into so'ham. If the words haṃ-sah are repeated quickly it becomes sa-ham (= so'ham) ham-sa-ham-sa-ham and so on. GS therefore calls respiration ajapā mantra.

haṃsa-3 हंस-३ (G 62), a bird, particularly a swan. The centre for meditation in the throat is named **viśuddha** because it resembles a clean pure bird.

haṃsa-4 हंस-४ (BY II 115, 123, IX 102; BVU 60-62), one of the ten names of oṃkāra enumerated by BY. It is so called because it always helps meditation on **āditya** and *udgītha* and also because with the incessant movement it destroys ignorance. BVU considers it to be the epithet of highest reality to be achieved.

haṃsayoga हंसयोग (NBU 5). According to *Upaniṣadbrahmayogī*, this yoga consists in the realization on the part of a yogī that he is the one Supreme Reality (= brahman) in all its wide expanse, viz. the oṃkāra, the three guṇas, the tattvas², dharma, adharma and the seven higher regions of creation.

hakāra हकार (G 73), "ham हं" is said to be the bījamantra² of sadāśiva. In Varṇabīja Prakāśa of Saryu Prasad Sharma, hakāra is mentioned as the vyomabīja-one of the seven bījas mentioned in connection with sadāśiva.

hatha हठ = hathayoga हठयोग (YTU I 19, 24 YSU I 129, 133; HP I 1, 2, 3, 4, 9, 11, 56), one of the four kinds of yoga⁴ mentioned in the Upanisads, the other being mantra, lava and rajayogas, of which, according to YSU, hathayoga consists of Patañjali's eight yogāngas and twelve more practices. These four vogas are often said to make up one yoga. According to HP, hathayoga forms a ladder for ascending the heights of rajayoga. In this text these two yogas are described together in such a manner that they can well be taken to be two aspects of one and the same discipline-yoga. HP uses hatha,

hathayoga, hathavidyā, hathābhyāsa and haṭhayogavidyā as synonyms. According to Svātmārāma, there are four components of hathayoga, viz. āsana, prāņāyāma², mudrā and nādānusandhāna, according to GS (I 9), ghata, which is Gheranda's word for hathayogavidya, has seven components, viz., satkarma, āsana, mudrā, pratyāhāra, prānāyāma², dhyāna and samādhi. Thus yama and niyama, which also form parts of yoga as taught by Patañjali, do not figure as regular components of yoga4 taught by HP, GS or G. Though these authors seem to have taken for granted that everybody who sets his foot on the path of yoga4 has first mastered these two disciplines (cf. Brahmānanda's commentary on HP).

In I 29 hatha is described by YSU as the union of the sun and the moon. In hathayogic language sun and moon, for which the letters hat and that are often used, refer to many different things, e.g., right and left nostrils, pingalā (to the right) and iḍā (to the left) nāḍīs², and the navel and throat regions.

haṭhakriyāmauli हठक्रियामौलि (HP II 35), best among the cleansing processes of haṭhayoga. HP considers nauli to be the best among the six purificatory processes of hathayoga.

haṭhasiddhilakṣaṇa हठसिद्धिलक्षण (HP II 78), characteristics of success in haṭha-yoga. Svātmārāma enumerates a num-

ber of characteristic features that ensue as a result of success in **hathayoga**, viz., slim body, radiance on the face, clarity of voice, lustre of eyes, freedom from diseases, control over the ejaculation of semen, stimulation of gastric fire and purification of **nāḍīs**. These are the signs of success in **hathayoga**.

hari हरि (GS V 50), viṣṇu. For sagarbha sahita prāṇāyāma² the yogī is advised to contemplate hari at the time of kumbhaka (pause in breathing). Hari is here said to be sattvamaya (full of sattva) and of a dark colour. His bījamantra is om². At the time of pūraka the yogī is advised to contemplate the rajovidhi रजोविधि and at the time of recaka the tamoguṇamaya (full of tamas) śiva. The sattvamaya viṣṇu is said to be the substratum of both vidhi (brahmā) and śiva.

halakṣa हलक्ष (GS VI 11), the name of the triangle seen (imagined) in the twelve-petalled lotus, which in its turn is imagined in the ovary of the thousand petalled lotus. In this triangle "om" is imagined and also the guru² as seated on a beautiful throne bearing a pair of sandals of the shape of two swans. This image is here prescribed for purposes of sthūladhyāna.

hastijihvā-1 हस्तिजिह्वा-१ (VU V 27; TSM 71), one of the principal nāḍīs². It is situated between iḍā and viśvodarā, behind the suṣumnā, and goes to the right eye.

hastijihvā-2 हस्तिजिह्वा-२ (VS II 32, 39), one of the fourteen important nāḍīs situated in front of the iḍā nāḍī and it extends downwards upto the left toe.

hastiniṣadana हस्तिनिषदन (VB, VM, VBh II 46), one of the āsanas enumerated by *Vyāsa* wherein the sitting style of elephant is to be imitated as the technique of this āsana.

hastibala हस्तिबल (VB, VM III 24), strength of an elephant. As a result of the practice of saṃyama on hastibala one attains the strength similar to that of an elephant.

hāna हान (YS, VB II 25), removal of the cause of the pain. One of the four aspects of discussion related to the science of voga. These four parts are heva-to be avoided; hevahetu-cause of that which is to be avoided: hāna-removal of that cause; and hanopaya-the means for removal. Hana here refers to the removal of the cause of that which is to be avoided. Once the person recognises the cause of the pain to come, he can strive for its removal. Since the cause of such pain has been described as association between the seer and the seen according to voga, the hana consists in removal of this association. This hana can be considered to be the highest goal of effort in order to establish the purusa or seer principle in its own form.

hānopāya हानोपाय (YS, VB, VM II 26), means for removal which consists in uninterrupted discriminate discernment. However, this continuous discriminate discernment is achieved through aṣṭāṅgayoga, thus in other way yogāṅga also can be considered as hānopāya. Since this uninterrupted discriminate discernment only can lead to the complete dissociation between seer and seen principle, i.e., hāna, this can be considered hānopāya.

hiṃsā हिंसा (YSH II 18-52), injuring. All creatures, according to this text, should be treated like one's own self in relation to sukha and duḥkha, irrespective of their being liked or not liked. Injuring them in any way is hiṃsā, which is strictly prohibited. Hiṃsā of plants and trees is permitted only for maintaining one's body or that of one's family. Patañjali's ahiṃsā signifies complete absence of enmity towards anyone.

hikkā हिक्का (HP II 17, V 13), bronchial hiccup. When vāyu accumulates in the region of phlegm diseases like hikkā easily develop.

hitā हिता (BY IX 194), a term representing all the seventytwo thousand nāḍis. According to BY, all these nāḍis originate from the heart region.

hiraṇyagarbha हिरण्यगर्भ (BY XII 5), the first exponent of yoga. The same verse has been quoted by Vācaspati and Vijñānabhikṣu in their commentaries on YS I 1. This suggests that these commentators do not consider Patañjali to be the first expounder of yoga and this

is also apparent from the $s\bar{u}tra$ - "atha yogānuśāsanam" (YS I 1) (cf. anuś-āsana).

huṃ ਵੁੱ (GS III 34), one of the two mantras² which the *yogīs* are advised to recite, the other being haṃsa, at the time of contemplating the ṣaṭcakras while performing yonimudrā.

hrtpadma-1 हत्पद्म-१ (DBU 26), the anāhata cakra in the chest. This is said to be astapatra अष्टपत्र (eightpetalled). Upanişadbrahmayogi, however, describes anāhatacakra as dvādaśadala (having twelve petals). This lotus is said to face downwards. As a bud it is as a pretty as full-blown 100-petalled flower. By meditating on the sun, the moon and the fire, localised in that one above the other, the $yog\bar{i}$ can cause the bud to open up and face upwards; and by reciting the bijamantra of this cakra, viz., "am अं" he can soon realise the brahman. This is the idea.

hṛtpadma-2 हृत्पद्म-२ = hṛdaya हृदय (HP II 51, 61, III 69), the chest. In ujjāyī prāṇāyāma the touch of inhaled air should be felt all the way from the throat to the chest.

In **bhastrikā prāṇāyāma** exhalation is felt in the chest, the throat and up in the head.

In **jālandharabandha** the chin firmly placed on the chest.

hṛd-1 हृद्-१ -hṛdaya हृदय (GS II 7-8, 40; III 10, VI 2, VII 14; G 9, 60, 82, 86; ANU 26, 34; ATU 5), the chest, including the lungs. It is not what we call the heart. It is the whole of the chest. According to ATU, the object of meditation in tāraka yoga may be located here or in the head. Inside the chest is the seat of śambhu (śiva) of which the brightness resembles that of the midday sun. This is the anāhata cakra. It is one of the nine dhyānasthānas. ANU calls it one of the seven dvāras (gates) and considers it to be the seat of prāṇa.

hṛd-2 हृद्-२ (GS I 37-38), the gullet (= oesophagus). Possibly it includes the larynx and the pharynx also, Hṛddhauti is a method of cleaning these parts. hṛddhauti हृद्धोति (GS I 13, 35), one of the four kinds of dhautis. It consists in cleaning the gullet in three ways, viz., by means of a daṇḍa दण्ड (small stick), by vamana (vomitting) and by means of vāsa (a piece of cloth).

hṛddvāra हृद्द्वार (ANU 26), the door of the heart. The first door in the sequence of seven doors mentioned, in the context of the attainment of ātman.

hṛdaya ह्रदय (YS, VB, VM III 34), heart. Vyāsa recognises it as the citadel of brahma wherein in the lotus-like cavity is the locus of intelligence (consciousness). As a result of the practice of constraint (saṃyama) on this place called hṛdaya, there arises the consciousness of mind-stuff.

hṛdayapuṇḍarīka हृदयपुण्डरीक (VB, VM I 36), lotus of the heart, attention on which gives the consciousness of the intellect resulting into stability of the mind. $V\bar{a}caspati$ describes this lotus having eight petals with the head downwards between the abdomen and thorax.

hṛdayamadhya हृदयमध्य (VS III 70), middle of the heart. The eleventh vital point in the body. It is situated fourteen fingers above the navel.

hṛdayādhāra हृदयाधार (SSP II 4), name of a cakra, fourth in the series of nine cakras described by SSP. This eightpetalled lotus is described to be located in the heart with the head downwards. As a result of the meditation on it, all the sense organs come under control of the practitioner. This description is almost similar to that of VB, VM I 36 and YS III 34.

hemanta हेमन्त (GS V 8, 11, 14), the autumn seasons. Beginning of strenuous prāṇāyāma is prohibited in this seasons. It may tell on one's health. Each season according to this text, lasts for two months. Middle of October to middle of December are supposed to be the autumn.

heya हेव (YS, VB II 16), pain to be avoided. According to the yoga philosophy, only such sort of pain which is bound to come in the future, depending on the past and present karmas, are to be avoided (heya).

heyahetu हेयहेतु (YS, VB, VM II 17), cause of that which is to be avoided. This refers to the investigation into the cause to be avoided. *Vācaspati* calls it *nidāna*. *Nidāna* (diagnosis) implies an insight into the treatment of the disease. The cause of pain in the world is due to the association between the Seer and the Seen.

hrasva हस्व (VU V 68), one of the three modes of pronouncing "om" during the practice of mantrayoga, the other two being dirgha (long) and pluta. It is the shortest length of exhalation required for a single recitation. Of course, short and long are relative terms.

According to this text, the recitation of **om** destroys the after-effects of sinful **karmas** which would otherwise remain in the form of dispositions (**saṃs-kāras**) for a long time after the performance of the evil deeds.

hrī-1 ही-१ (SAUI(2)1,8; DUII10), one of the ten niyamas (observances) -the feeling of embarrassment on doing anything which is against the injunctions of the *Vedas* or the rules of society.

hrī-1 ही-२ (VS I 62), modesty. One of the ten niyamas. An attitude of avoiding the deeds condemned by the *Vedas* and social laws.

hlāda ह्लाद (YS II 14), pleasure. According to the theory of karmaphala, all puṇyas (virtuous actions) are rewarded by an experience of pleasure at sometime or the other in future. Hlāda is not the blissful experience called ānanda, which forms an aspect of the samādhiprajñā of nirbījasamādhi.
